Il>
Il> 73,
Il> Todd
Il> N9MWB

Hi Todd...the choke DOES go in the supply line to the final amplifier
transistor on the amp board. It turns out that the 100 uH choke is the
correct value. It must have been a misprint in the article. There are
a few other misprints too so I'm neing careful as I go.
This article was from 73 magazine a couple of years ago. I'm told that
73 isn't very good with the editing. Perhaps the errors were made during
the re-draft of the schematic.

There was the local lady who finally passed her Extra exam, and when the
new callsign came, it was AA3FU.

She turned it in _immediately_ for a new one.

Welcome to the third rock from the Sun. I've heard emergency
nets that were being jammed. As to what the twits get out of
it - who the hell knows. It would be nice to be able to get
rid of them but not likely to happen any time soon. It's just
a modern phenomena you have to learn to live with. Ignoring
them helps. Chewing them out doesn't. On VHF you have some
slim chance of tracking them down but that sort of thing is
pretty rare on HF. The only recent one that comes to mind was
a kid who was transmitting phony emergency traffic. The Coast
Guard found him with a little help from its friends. Sadly,
I remember a time when the ham community was smaller and
smarter and that sort of behavior would have been unthinkable.

I respectfully disagree with the "modern phenomenon"statement above. Such people have *always* been around, but are more noticeable now for two reasons:

1) There are more of them. More population, more hams, therefore more twits. Even if the percentage of twits is the same, they will be more visible simply because there are more of them as the population grows (but see #2 below, also);

2) As a society, we exercise far less restraint, courtesy, and common sense than we did 30 or 40 years ago. As a result, I believe that some who would have refrained from this activity in earlier times don't now because we seem to have developed, as a society, an overwhelming desire/need to be "noticed." This need is satisfied in many different ways, from buying houses/cars/clothes/ham gear we can't afford (to "impress" someone) to jamming, interfering, cursing those who make mistakes (sometimes honest and unknowing mistakes, too, which results in "shoutfest" over the air) and blabbing our personal opinions on sex, religion, crime racial problems, the government, the media, etc., etc., ad nauseum so that we can be "noticed."

What a shame that our hobby (and even worse, our society) has degenerated in this manner. It seems that, rather than reaching upwards to try and improve, to strive for excellence, a large segment of Americans are satisfied to drop down to the "lowest common denominator" in attitude and behavior.

Just my opinions, of course; no flames intended toward anyone in particular. And I don't have a "quick fix" for what I've described because I don't think there is one.

Except that the last 2x1s and 1x2s were given out over a year ago (unless
he lives in one of the KH zones). It's all 2x2 A calls now.

I considered changing mine - N5UWY - once I got to Advanced, but decided
not to since the only cool 2x2 is KK5KK (one of only two symmetrical calls
- think about it). Since I'm not assured of getting that one, which
should be issued in the next 3-4 months, I figured I'd keep mine.

N5UWY, aka N5UWI, N5UWE, N5UWA, etc, etc.

The only way to change is to move out of 3 land. You might be
able to get a po box in 4 or 2 land and change back but you will
never get a 2x1 or 1x2 call.

That is only one use of PGP. PGP also provides "digital signatures", a way of sending messages in plain text but ensuring that the apparent sender really did send it, and that nobody along the way altered the message. This is exactly what the FCC wants, to enforce content restrictions on the originator.

# 4231. Re: Techno-Whizzy project

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-15 17:38:00 UTC
From: tom.alldread@kbsbbs.com
Message-ID: <9412160008121 4307@kbsbbs.com>
Source record: 255075

Greetings Hugh:
I built the Techno Whizzy from the kit about a year ago and
mounted it as a satellite PCB on an ISA computer buss prototype board. I
subsequently wrote a program to turn it into a computer controlled sweep
generator. It seems to work great.

One thing to watch out for however is shielding and ground plain
integrety. I found that the 55 MHz clock mixes with multiples of the DDS
output frequency and tends to float around on the ground buss. These
products can radiate through the HF and VHF spectrum if you don't place
close attention to the shielding integrity.

The only part of the project that I built is the DDS VFO board
which only has coils in the output LPF.

Generally speaking I find the Techno Whizzy VFO very useful for
my application. I hope you have similar success.

73 and Good Luck with your project,

Tom, VE7TMA

Source record: 254890

This is to inform you of what seems to be a discrepancy between a message from
your system and the currently accepted specifications for echo mail.

Because the message appeared to be grunged, or a dupe, it was deleted in order
to protect the rest of the echo mail distribution system. This copy is sent
to you for information purposes, to help you find the source of the problem
and fix it.

If you are running Gecho 1.10, please obtain the 1.11 fix at your
registration site. 1.10 has a bug in it that grunges the headers and causes
problems with some other mail tossers.

The discrepancy noted in the message, as received here, was:

1) The number of ORIGIN lines (2) exceeds the maximum of 1.

The message was in the RADIO.AMTR.MISC area.

Rick,

any amateur station MUST be IDed on the FREQ it is transmitting on at that time.....

it cannot ID somewhere else in the band....that is NOT what Part 97 says..

In fact if you were in QSO on one freq and moved to another, you must ID on the former freq before moving.....then ID at the 10 min inerval on the new freq!...

I don't know this rig but your description sounds like the
HP three blade cord that is standard with 95% of the computers
sold in the past 10 years. If your plug has two blades parallel
to each other about 1/2 inch apart with a third blade slightly
offset between them that is what you have. A buck or two
at any computer store. Most of my modern Rice Radios use this
cord. 73 de Jerry KC5EGG

Not quite true, Jim. You can get a new call sign any time you want.
The FCC Rule Book guide to the FCC regulations, published by the ARRL
(9th edition) says this on page 4-6.
_You are eligible for a new call sign at any time. Most amateurs,
however, only request a new call sign if they upgrade their operator
license class or change their mailing addresses to a different call
sign area._

All ya do is fill out a 610 and send it to Gettysburg. Be sure to
initial the box that says you want a new call.

# 4236. how do you exchange QSL cards ?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-15 18:37:45 UTC
From: SYJERRY@duq3.cc.duq.edu
Message-ID: <3cq2dp$ns@godot.cc.duq.edu>
Source record: 254933

I am just very new to the HF bands and have made a few contacts
(all cw). I sent my QSL card to each station I contacted and
my QSL card has PSE QSL. So far I have not received any back.

I thought that when Hams make contact, they exchange QSL cards.
or is this not done anymore in this modern day.

Or is there a procedure that I should follow in order for me
to get a QSL card in return. My call is in the callbook, and
even if those stations do not have callbooks, they would have
my address when they receive my QSL card. or maybe they want
me to include a 19cent postage and 1 cent for their card ?

# 4237. Non-amateur US frequency allocations

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-15 18:49:34 UTC
From: majewski@spsd630a.erim.org
Message-ID: <MAJEWSKI.94Dec15134935@spsd630a.erim.org>
Source record: 254971

Hello to all-

I'm trying to get information about non-amateur frequency
allocations; that is, for business and government.

I'm specifically interested in the 138-143 MHz band -- who
holds the primary and secondary allocations? What specific
FCC or Gov't action set this up? How is this band of frequencies
divided up?

Can someone point me to a book or other publication where this would
be covered in detail? I poked around the WWW site for the FCC
and came up empty handed.

Thank you!

Ron (wb8ruq).

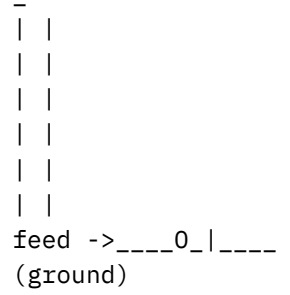
gene@eagle.csl.uiuc.edu (Gene Gardner):

>The Dec "CQ" was certainly quite favorable, and I do not doubt that
>compact antennas can work well on 160 meters. However, in a direct mail
>letter, the author claims a "Radiation resistance" of 50 ohms. I find
>this to be counter-intuitive. Usually, an antenna system enclosed within
>such a small spherical volume (as a percentage of a 160 meter wavelength)
>would be expected to have quite low "Radiation resistance". His claim of
>50 ohms also seemed to specifically include 160 meters. 'Any expert
>opinions out there?

Looks like Lew has the same misconception about "folding" antennas as Bill Orr does. "Folding" an antenna doesn't improve the efficiency reduction due to ground loss, as I'll explain in a minute. (I called Bill on this years ago, and he sent a postcard acknowledging his error. About two years later, the same misconception showed up in his column again. I don't bother writing any more.) Anyway, here's what happens:

Suppose you have a quarter-wave vertical antenna having a radiation resistance of 36 ohms, and a ground system with 14 ohms of loss. You're feeding it with coax. The current flowing into the vertical from the center of the coax is the same as the current flowing from the ground into the coax shield. Therefore, the antenna and ground have the same amount of current flowing through them. Call the current I (how original!). The ground loss is 14*I^2 watts, and the power radiated is 36*I^2 watts. The total power supplied is the sum, or 50*I^2. The efficiency is the fraction of the total power which is radiated, or (36*I^2)/(50*I^2), or 36/50, or 0.72. Ok so far. Lew has this part right.

Now let's "fold" the antenna to make a folded monopole:



If we look at the feedpoint, we find that for the same power input as before, the voltage is twice its previous value and the current half its previous value. From Ohm's law, the feedpoint impedance has quadrupled. This is due to the transformer action of the folding process, caused by mutual coupling between the two wires. So now our "radiation resistance" is

4*36 = 144 ohms. Since the loss resistance is still 14 ohms, isn't our efficiency now 144/(14+144) or 91%? The answer, Lew and Bill notwithstanding, is NO! But this is the assumption Lew makes to justify the claim of high efficiency in the "Uni-Hat" antenna.

Here's why not. Since the antenna resistance is now four times its previous value, and the feedpoint current is 1/2 its previous value, the power radiated by the antenna is 144*(I/2)^2 = 36*I^2 watts, where I is the current we had in the monopole. So the radiated power is the same as for the monopole. How about the ground loss? Well, I/2 is entering (or exiting, depending on your point of view) the ground where the feedline shield is connected. But another I/2 is entering the ground system where the second wire is connected to ground. This current is in phase with the current from the feedline shield. The result? A total of I amps flowing through the same 14 ohms of ground resistance as before. The ground loss is 14*I^2 watts, the same as for the monopole. The efficiency hasn't changed. Let me say that again: The efficiency hasn't changed. (How can we get this across to the guys at CQ? Any suggestions? (I am sending a copies of this to Lew and Bill. There may be hope for Lew, but I've given up on Bill.)

One could argue about calling the feedpoint resistance of a folded antenna the "radiation resistance", but technically it's correct. However, if you do use the term that way, the efficiency is no longer simply the ratio of radiation resistance to radiation + loss resistances, as I showed above. The efficiency *is* *always* the fraction of total applied power which is radiated.

That being said, let me point out that the "folding" process *does* help wire loss. Wire loss is probably insignificant for this antenna (except maybe on 160m), but can be important for a small loop. Doubling the number of turns on a loop effects a 4:1 impedance transformation by the same mechanism as "folding" a monopole or dipole. You end up with half the current in twice the length of wire. Since the power loss is directly proportional to the wire length but to the square of the current, you can calculate that each doubling of the number of turns in a loop or wires in a "folded" antenna will halve the wire loss. Of course, just putting two wires in parallel will do the same thing, although the impedance step-up is beneficial in making matching easier.

From the picture and description, it looks like the "Uni-Hat" has several things going for it. First, a top hat *does* raise the radiation resistance without affecting the ground current, so it does improve efficiency. (Its mechanism for raising the radiation resistance is to change the current distribution in the radiating element.) Also, the "folded" antenna is fatter than an unfolded one. This has two beneficial effects. First, it reduces the amount of reactance for a given antenna height. This lowers the values of lossy loading components necessary to bring the antenna to resonance. It also widens the bandwidth, as Lew pointed out. Incidentally, wide bandwidth in a small (in terms of wavelength) antenna generally is due to loss, although the fattening does help without incurring additional loss.

Guess a fitting end is a quote from the late Robert Heinlein: "TANSTAAFL"
(There Ain't No Such Thing As A Free Lunch).

# 4239. Bad Press For Hams (again!)

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-15 19:50:56 UTC
From: magliaco@pilot.njin.net
Message-ID: <3cq6n0$ohq@pilot.njin.net>
Source record: 254974

The following letter appeared in the December 10, 1994 issue of the "Asbury Park Press" (NJ):

A series of well-orchestrated articles featuring amateur radio operators recently appeared in local and national newspapers. The articles portray the amateur as a well-meaning individual standing by to provide emergency communications in times of disaster.

A well-kept secret is that for every amateur broadcasting from his home, there are several neighbors whose household electronics are made unusable by radio interference. The Federal Communications Commission, which receives thousands of complaints against amateurs, will not release the complainants' identities, thus preventing any effective union against this intrusion. When the FCC receives a complaint, it turns it over to a field office. This initiates the usual charade: The field office explains that the amateur operates within the FCC standards and then the American Radio Relay League - which is the union of members - offers to help. The upshot: The complainants' home electronics equipment and wiring are declared deficient. End of story.

A recent case brought in New Jersey civil court against an amateur resulted in the amateur agreeing to sell his home (with assistance from his homeowner's insurance) to one of the complainants. This exemplifies the damages that one amateur radio operator (meeting FCC standards) can cause to neighbors' property rights and home valuations, and the extraordinary lengths to which ordinary homeowners must go to rid themselves of this horrendous nuisance.

The ARRL tacitly recognizes the validity of complaints against its members by constantly bombarding Congress with proposals to release them from regulations that commercial operators must abide by - all on the pretext of being a "national resource" in times of emergency. Yet, amateurs are not necessary in this role, as emergency governmental organizations funded by our taxes are well able to provide for their own communications. In fact, amateurs may well interfere with these local services.

The time when radio communications was an arcane art known to few is long past. The skill to operate modern radio communications equipment is easily learned. The FCC recognized this fact long ago by greatly reducing technical knowledge requirements for obtaining an amateur license. This in turn resulted in the ability of the ARRL to increase its membership to the point at which it feels it can sway Congress to its way of thinking - aided and abetted by the manufacturers of amateurs radio equipment.

The ARRL had better wake up to the damages and ill will its members cause. The public is becoming increasing aware of health hazards caused by nearby

radio transmitting antennas. Homeowner resistance is mounting to installation of large, unsightly antenna fifty feet from their homes, radiating several thousands of watts.

Municipalities are questioning the installation of 200-foot antenna towers in the midst of their communities. They are questioning the radio interference effects and the impact on property values, which go largely unaddressed. If the ARRL policies do not change, the amateur could very well go the way of the dinosaur. The myth of the amateur as a skilled technologist extending the state-of-the-art is already extinct.

# 4242. Re: Change of call

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-15 20:58:00 UTC
From: ys@isr.harvard.edu
Message-ID: <3cqako$q87@decaxp.harvard.edu>
Source record: 254937

There was a question about changing one's call sign, and also a response that one has to move to another district for this purpose. This was true in the past, but not any more. The following is an excerpt from the latest version of Volunteer Examiner Manual (page 35) about completing Form 610:

"The FCC no longer limits applicants to requesting a call sign change when changing call districts or upgrading to a call-sign change eligible license class. It's strictly the candidate's option ...."

One just needs to check Box 4E of Form 610 with all other necessary items. The holder of 2x1 or 1x2 call sign should remember, however, that he/she will not receive this type of call sign any more in districts 0 through 9. To the best of my knowledge, 2x1 call signs are issued only in N. Mariana Is., Guam, Johnston Is., American Samoa, Wake W. Peale, and Virgin Is.

# 4243. Re: how do you exchange QSL cards ?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-15 20:59:13 UTC
From: gbrown@unlinfo.unl.edu
Message-ID: <3cqan1$a2r@crcnis3.unl.edu>
Source record: 254970

Hi Jerry,
When I was first licensed in 1962, exchanging QSL cards was literally the "final courtesy of a QSO", and return rates were very high. Postcards also cost 4 cents to mail then. Domestic QSL return rates have apparently dropped dramatically (I make very few domestic contacts anymore, and when I do I now QSL only when I receive one...but 100% on those).

Cost is a concern, especially in rarer states, but I think it is generally quite impolite not to reply to a QSL request even tho an SASE is not included. But if you really need confirmation from a rare state, an SASE will help.

The more interesting a QSL card is, the better the reply rate. That doesn't mean expensive, tho. Write up a little bit about yourself, your interests and where you live and include a copy with your QSL. The idea is to make your's stand out...not just another postcard.

There are those around who think QSLing is foolish/wrong/whatever, and you'll never get a card from them, but don't worry about it.

You just have to learn from your experience and decide what you want. Getting a lot of cards means making a lot of contacts, and putting out a lot for postage...understanding that you will not get back what you put into it.

Personally, I think that every request should be answered. That's part of the game. If a person can't fulfill this simple courtesy, he shouldn't make the contact. (I'm sure I'll take some heat for that comment!)

This is not true. You can get another callsign whenever you want even
if you haven't moved. Of course, there are no more 4-character callsigns
left in the U.S., but if you want an AA3xx call, you can get one.

# 4245. Alpha Bravo Charlie Delta: phonetic alphabets (revised)

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-15 21:11:29 UTC
From: Brian.Kelk@cl.cam.ac.uk
Message-ID: <3cqbe1$2a3@lyra.csx.cam.ac.uk>
Source record: 254939
Cross-posted to: alt.usage.english,sci.lang,rec.radio.amateur.misc,rec.radio.info

Phonetic Alphabets (Alpha Bravo etc)

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets and spelling alphabets. This collection
currently includes alphabets for the following languages:

English, French, German, Dutch, Flemish, Italian,
Rumantsch, Slovak, Polish, Hungarian, Swedish,
Finnish, Russian, Chinese and Esperanto.

This posting supersedes the one of 17th November.

Recent new material: Russian (Anna Boris) 15 Dec 94
Esperanto 17 Nov 94

My thanks to the many contributors, not all of whom are
acknowledged below.

I can make no guarantee of accuracy of this information;
indeed please send me any corrections or additions.

In my capacity as the editor of this collection I have no
objection to the further electronic distribution of this
posting in full in circumstances where it is likely to be of
interest.

Comments in square brackets are my own.

Brian Kelk bck1@cl.cam.ac.uk
15 December 1994

***** ENGLISH *****

The NATO phonetic alphabet (as per the Cambridge Encyclopedia
of Language under Seaspeak):

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

[The same alphabet, modulo Alfa and Juliett, is approved by
the International Civil Aviation Organization and the FAA.
The International Telecommunication Union Phonetics list
has: Alfa, Juliette, Oscar/Oskar, Victor/Viktor.
Dates from about 1956.
UK police use Indigo instead of India (?)]

Telecom B:

Alfred Benjamin Charles David Edward Frederick George Harry
Isaac Jack King London Mary Nellie Oliver Peter Queen Robert
Samuel Tommy Uncle Victor William Xray Yellow Zebra

[Found in Swedish, Dutch, Hungarian telephone directories.
A Swiss directory has: Andrew Charlie Lussy Queenie Sugar]

British A:

Amsterdam Baltimore Casablanca Denmark Edison Florida
Gallipoli Havana Italia Jerusalem Kilogramme Liverpool
Madagascar New_York Oslo Paris Quebec Roma Santiago Tripoli
Uppsala Valencia Washington Xantippe Yokohama Zurich

[An 'international' alphabet in a Dutch telephone directory
has: Danemark. A 'French' alphabet in a Hungarian directory
has: Cassablanka Danemark Que'bec Upsala Zu"rich]

Used by police in New York City:

Adam Boy Charlie David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Peter Queen Robert Sam Tom
Union Victor William X-ray Young Zebra

[Variants: Eddie Larry Nancy Thomas Yankee Yellow]

Used by police in Nassau County, Long Island, New York:

Adam Boston Chicago Denver Edward Frank George Henry Ida
John King Lincoln Mary Nancy Ocean Peter Queen Robert Sam
Thomas Union Victor William X-ray Young Zebra

Used by police in San Diego, California:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Queen Robert Sam Tom Unit
Victor William Xray Yellow Zebra

Used by police in Hutchinson, Kansas:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Q.. Robert Sam Tom Union
Victor William X-ray Yankee Zebra

Sometimes used by radio hams (unofficial):

America Boston Canada Denmark England France Germany
Honolulu India Japan Kilowatt London Mexico Norway Ontario
or Ocean Pacific Quebec Radio Santiago or Spain Tokyo United
Victoria Washington Xray Yokohama Zanzibar

[Much variation: Amsterdam, Brazil, Baltimore, Chile,
Finland, Greece, Guatemala, Hawaii, Italy, Kentucky,
Luxembourg, Nicaragua, Portugal, Romania, Sweden, Texas,
Uruguay, Venezuela, Whisky, Zulu]

The ARRL (American Radio Relay League) alphabet (1948):

Adam Baker Charlie David Edward Frank George Henry Ida John
king Lewis Mary Nancy Otto Peter queen Robert Susan Thomas
union Victor William x-ray young zebra

[Nowadays the ARRL endorses the NATO/ICAO alphabet]

Allied Services 1945:

Able Baker Charlie Dog Edward Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tape Uncle Victor
William X-ray Yoke Zebra

From a book entitled "The Complete Morse Instructor..." (1944):

able baker charlie dog easy fox george how item jig king
love mike nan oboe peter queen roger sugar tare uncle victor
william x-ray yoke zebra

[The same alphabet is described as "Used by Armed services of
USA & GB" in the ARRL 1945 Handbook. Entries cited in variants
of this alphabet: affirm, cast, hypo, inter, negat, option,
over, prep]

Western Union:

Adams Boston Chicago Denver Easy Frank George Henry Ida John
King Lincoln Mary New_York Ocean Peter Queen Roger Sugar
Thomas Union Victor William X-ray Young Zero

British Army 1927:

Ack Beer Charlie Don Edward Freddy George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc
Uncle Vic William X-ray Yorker Zebra

Royal Navy 1917:

Apples Butter Charlie Duff Edward Freddy George Harry Ink
Johnnie King London Monkey Nuts Orange Pudding Queenie
Robert Sugar Tommy Uncle Vinegar Willie Xerxes Yellow Zebra

U.S. Army 1916:

Able Buy Cast Dock Easy Fox George Have Item Jig King Love
Mike Nap Opal Pup Quack Rush Sail Tape Unit Vice Watch X-ray
Yoke Zed

A guy I work with has the unfortunate call KF2CK, where the "2" is
close enough to a "U" on voice and CW to get some double takes.

I don't mind my own call on voice or CW, but visually, it looks like
a bad rack of Scrabble letters: AA0HU

73,

Scott

In fact, if you're an ARRL member, they send you a letter reminding you to renew and enclose a 610 form and a pre-addressed envelope! I also received the same "offer" from W5YI and knew better than to send them my money for what was a non-service. It reminded me of those ads to help get you as Social Security number for only a "nominal fee".

My conclusion: shame on them. But, that's free enterprise...

: Maybe we should take a survey to find out who has the *worst* callsign! I
: think I'm a contender for the worst callsign on phone-WD5FFH. (okay on CW,
: though)

Let me make two entries in the "contest."

My call in the 60s was WN1CYF. Considering that back then a Novice could only use CW, I am surprised I like CW. It did strengthen my right arm a bit, but I don't really like the half Popeye-arm look as much as I used to.

My current call also qualifies, but only indirectly. When I sat down before the FCC, I blasted through the tests. I was quite proud to have been among the first to have brought my exam to the front desk. In retrospect, I should have been a bit less brazen; had I been just a bit slower, I would have been the proud recipient of KA1CW instead of KA1CV. (CV does roll off the fingers on CW, though, especially in a contest.) It is all too late now, though; my writing in QST has brought me infamy. The only consolation I have is the cute "phonetics" given to me by Al Bloom, N1AL. He says that I always "Keep After 1 Contest Victory." It is small consolation, indeed.

(All in the spirit of good fun!)

ZCZC AE73
QST de W1AW
DX Bulletin 75 ARLD075
From ARRL Headquarters
Newington CT December 15, 1994
To all radio amateurs

SB DX ARL ARLD075
ARLD075 DX news

The items in this week's bulletin are courtesy of Tedd, KB8NW, the OPDX Bulletin, Rolf, DL7VEE, the DX News Letter, DJ8WL, Mike, OM2DX, and the 160M Bulletin. Thanks.

TUNISIA. Club station 3V8BB continues to be active and has recently added 160 meter capability. QSL via JF2EZA. No documentation for this operation has been received by the DXCC Desk.

KUWAIT. 9K2MU, with pile up assistance by DJ9LJ, has been working 3792 kHz around 0100z. QSL via WA4JTK.

MINAMI TORISHIMA. Ishi, JI7BCD, has been busy as JI7BCD/JD1. Check 7010 kHz at 1030z and 2345z. JD1BIE has also been spotted on 40 meter CW.

RWANDA. Alex, PA3DZN, who is active as 9X5EE on 40 through 10 meters, plans to be up and running on both 160 and 80 soon.

ALAND ISLAND. Pete, N0AFW, will visit Finland from mid-December to mid-January. Plans are to operate for a few days as OH0/N0AFW near the end of his stay. Pete prefers the lower bands and WARC bands.

MARKET REEF. Transportation and weather permitting, Pete may be able to get on as OJ0/N0AFW for a few days, probably between January 10 and 15.

CAYMAN ISLANDS. JH1ROJ will be on Grand Cayman Island from December 29 to January 5. Listen for the call sign ZF2RO on 80 through 10 meters with SSB and CW. QSL via JH1ROJ.

SOUTH SHETLANDS. Henry, SP3FYM, should be on the air in mid December, probably with the call sign HF0POL. His assignment should last through the end of 1995. Henry prefers RTTY and 160 meters. Rhombic antennas should provide many 160 meter operators with South

Shetlands. DJ8WL reports Henry made nearly 25,000 QSOs during his 1990/1991 stay. SP2JYV may be active from King George base sometime in December. Listen for him on all bands with CW, SSB and RTTY.

FALKLAND ISLANDS. Dave, VP8BKT, has been very active. Try 14184 kHz between 0000 and 0300z, 18153 kHz at 1830z, and on 21290 kHz starting at about 1700z. VP8CMP has been on 21290 kHz between 1300 and 1500z.

ANTARCTICA. Gavin, VP8GAV, is now at Fossil Bluff, a British base. He has had a good signal on 14024 kHz after 2300z. QSL via GM0LVI. Eddie, VI0ANT, has been active on RTTY from one of the Australian bases. Try 14083 kHz between the time slots of 0100 and 0200z, and 1300 and 1500z. If weather permits, Eddie will be sporting some sort of Yagi. QSL via VK4EET, Eddie DeYoung, 131 Plantain Road, Shailer Park Q 4128, Australia.

PALESTINE. A very weak signal from a station signing ZC6B was heard on 14243 kHz at 1430z, Sunday, December 11. OE6EEG, who was on frequency maintaining the list, stated he would run the list operation for ZC6B every Saturday and Sunday. The DXCC Desk emphasizes that ZC6 was deleted from the DXCC Countries List as of July 1, 1968, and that the ZC6 prefix is currently assigned by the ITU to the United Kingdom. The DX News Letter of December 6 states that ZC6B was a joint venture DXpedition from the Ghaza Strip by Israeli and Jordan amateurs.

<rest deleted>

Actually, I have the official list of callsign suffixes that the FCC _will_not_issue_ for new callsigns. It includes most of the obvious, and several not-so-obvious. I can post if there's any interest. The list applies only new callsigns, not those which are already in existance, that are grandfathered in. Today, a WOP callsign would not be issued (a hard-coded no-no in their software).

This list came along with a document describing their new callsign database format, current as of last month.

As a note of interest, the FCC has scrapped their old, steam driven computer and are now keeping the database on a SparcStation 20 running Sybase. They now also have club data online as well as registered alien operators. The format is totally different than before and it has caused me some grief to maintain backward compatibility with the older databases.

Cross-posted to: aus.radio,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 15/2330Z DECEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 15 DECEMBER AND FORECAST FOR 16 DECEMBER - 18 DECEMBER
---
1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 93/38

GOES satellite data for 14 Dec
Daily Proton Fluence >1 MeV: no data
Daily Proton Fluence >10 MeV: 1.1E+04
Daily Electron Fluence >2 MeV: 4.3E+07 (normal)
X-ray background: B1.9
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
16 Dec 17 Dec 18 Dec
Activity Low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 16 Dec: 93/38

---
2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled until 12UT and
unsettled to active thereafter, following the start of activity
forecast for 16-17 Dec.

Estimated Indices : A K Observed A Index 14 Dec
Learmonth 16 2233 4433
Fredericksburg 17 7
Planetary 15 7

Observed Kp for 14 Dec: 2112 2223

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
16 Dec 20 Unsettled to active
17 Dec 25 Mostly active, with brief minor storm periods
possible.
18 Dec 8 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 11 was issued on 13 December and is

current for interval 16-17 December. Current activity is due to a
coronal hole.
---
3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
15 Dec fair-normal fair-normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
16 Dec fair-normal fair poor
17 Dec fair fair poor
18 Dec normal normal fair-normal
Conditions became degraded as the level of geomagentic activity
increased.
---
4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
15 Dec 8 near predicted monthly values

Predicted Monthly T-index for December: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
16 Dec 5 Mostly near predicted monthly values, with occasional
depressions of 15-20%.
17 Dec -15 10 to 20% below predicted monthly values
18 Dec 15 Near predicted monthly values
COMMENT: IPS HF Communications Warning 14 was issued on 13 December
and is current for interval 17 December. Sporadic E layer was
observed at times yesterday and is expected again at times today.
MUFs at Townsville were enhanced by 30-70% 06-08UT yesterday, while
MUFs at Hobart were near predicted monthly values. Propagation
conditions became degraded during the local night and are expected
to remain so over the next two days.

You can always request a change but if all of the 2x1 are taken (which they are.) you will get a 2x2 call. Or you can request an advanced or tech/gen call while they last.

Or just wait for the vanity calls to go into effect. Hopefully in my lifetime!

"Dumb" ASCII terminals are available at ham/computer fests and
electronics surplus/resale outlets. Prices often from $15-50 depending
on condition. Can't get much cheaper than that, unless it's free.
That's the absolute minimum you need just to get signals up and back
on packet.

Yes, but the American Morse Code (used over landlines) (we use the
International version) had several characters with spaces:

A .-
B -...
C .. . (note the space)
D -..
E .
F .-. (the International's R)
G --.
H ....
I ..
J -.-. (the International's C)
K -.-
L = (a long dash)
M --
N -.
O . . (again note the space)
P ..... (the International's 5)
Q ..-.
R . .. (another one with a space)
S ...
T -
U ..-
V ...-
W .--
X .-.. (the International's L)
Y .. .. (another space)
Z ... . (yet another one)
1 .--.
2 ..-..
3 ...-.
4 ....- (finally a `normal' number)

5 ---
6 ..... (almost the `error' character)
7 --..
8 -....
9 -..-
0 = (same as L - a long dash)
, .-.-
. ..--..
& . ...

Ham Radio magazine, unfortunately, died as an excellent technical and
decidedly different amateur radio periodical well before its last issue.

As has been remarked, we used to use AR K. AR at an early time was
used to punctuate messages, dividing one from another, but gradually
the drop in message handling, especially transmission of several messages
in sequence, caused hams to forget that was the distinction from
K, which meant "go ahead".
As I remember it, the need to use KN came up when people hearing
only the end of a transmission, would assume that K was the end of
a CQ or a QRZ and call. Remember that in the interval between
spark and transceivers, most people either did not dare to retune
a transmitter, or could not because it was crystal controlled.
As a result, a CQ had to be followed by tuning over as much of a
band as you had patience for, and most QSO's were on two frequencies,
one for each station. Thus "breaking in" was practically impossible.
The transceiver with stable VFO got us to today, where we non-dx
stations only listen within a few hertz of our own frequency.

>There IS a right and wrong was to use these prosigns.
>
>AR is used in the format <call> AR. It indicates you are turning it over to a
>specific station.

No, this is not necessarily true. AR means `End of work'. An example
of how this would be used is as follows:

<Text of some message> AR <your comments, possibly with regard to the
message> BT xxxx DE NH6IL K (or KN if you don't want anyone else to
break in, such as within a net).

So the prosign AR is supposed to be a seperater; as used above it
seperates the text from your comments.

>K means "Any station transmit". It invites anyone listening to respond.
>
>KN means "Specified station only, transmit". It is used when you're talking
>to a specific person and only want them to respond.

Such as within a net where several stations might attempt to call
you after you've ended a transmission.

>There is, generally, no good reason to combine the prosigns (ie, AR K)

Ic> in a direct conversion receiver. The coil is an RF filter, not an RF
lc> choke...

Ic> 73, Cecil, KG7BK, OOTC (All my own personal fuzzy logic, not Intel's)

Hi Cecil...re: you have a Techno-Whizzy DDS running your DC receiver...

In this case, the coil IS being used as an RF choke...not a filter.
I guess I didn't specify that I am speaking of L1 on the amplifier
board, not L1 or the low pass filter on the DDS board.

You didn't happen to also build the amplifier board too, did you ?
I see that they made another error on the amp board...they have
C2,4,5 and 10 listed as 2 microfarad...these are used as instage
coupling...I would suspect that .2 or .02 or even .002 microfarad would
be more in order. 2 microfarad seems a bit high to me.
Any comments ?

By the way, did you build the DDS as a kit as ordered from Elktronics
or did you go it alone ?
I'm wondering if there are other sources for the Q2220 DDS chip ?

73 Hugh VE3OYH please reply by e-mail if possible...

DO>There is a guy up in Maine, K1MAN Glenn Baxter. This fellow has
>started a broadcast on top of our round table. At first we would just
>ignore him as trivial. There is lots of qrm on 75 meters as most of you
>are aware.

Don:

Glenn has been a pain in the #$$ (side) to many hams over the years, just as, I'm sure, many hams have been a pain to him in return. There have been THOUSANDS of HOURS spent by others writing complaints about Glenn and his IARN bulletins. As far as I know, few, if any, have done any good at all.

Yours is NOT an isolated incident. Unfortunately, you may not have much recourse... many before you have not...

Glenn has been broadcasting his IARN news "bulletins" over and over on the 20M band for years... and he's butted heads with the best of 'em over the years.

By virtue of the fact that he's broadcasting information "of general interest the the amateur radio community", and "on a regular schedule", he comes under the same broad classification as the ARRL bulletin broadcasts do. Unfortunately, the ARRL has established its bulletin frequencies over MANY, MANY years of service to the amateur communiity, and Glenn has only seen service for a mere 'several' years, and on a much more limited spectrum.

Morally, I'd say that Glenn's wrong for starting up his NEW bulletins on an existing (in-use) frequency, but, in truth, just about any frequency will be "in-use" sometime when he wants to transmit. There is a measure of importance in transmitting bulletins on an 'established' (or pre-determined) frequency. It wouldn't do much good if you had to find a different frequency each time you wanted to send your bulletins... no one would be able to find you... it's a problem, not easily (or satisfactorily) solved... and one which we in the general amateur community will like regardless.

That Glenn doesn't listen before he transmits creates a problem, because his transmissions will undoubtedly interfere with ANY QSO already in progress. The fact remains that, given the fact that he doesn't listen before he transmits, and that he's NOT gonna listen (period), means that one of several things will probably have to happen:

1) your group will have to move to a different frequency
2) you group will stay and butt heads with a transmitter which doesn't even know you're there

3) you may even be cited for intentional interference to
Glenn's 'bulletin' broadcasts, regardless of who was there
first.
4) the FCC may (but it's doubtful) make Glenn move to a
different frequency due to the fact that the present one has
been established as a bonafide emergency frequency. Don't
hold your breath on this one though... chances are probably
slim to none.

Many folks know that the ARRL (W1AW) broadcasts its bulletins on a set
of specified frequencies, and at predetermined times, and most folks are
willing to either stay off those frequencies when they know W1AW is
about to begin its bulletin transmissions. Some don't. And those are
the ones who get riled when W1AW "stomps" on "their" in-progress QSO.
It all goes back to the need for "bulletin" stations to be able to have
pre-established frequencies and times on which to transmit. And,
although I don't agree with the way it sometimes works out, we must know
when to fold our tents and move on, because we can't fight and win it
every time.

I wish you luck in your efforts.

73 - Tom Hammond N0SS

Source record: 254963

LI>I want to learn morse code, and copied the code down from a reference
>card that a friend of mine had, but somehow I think that the code
>is wrong. After checking the FAQ, I could not come up with an
>internet source which has the code listed.

LI>I was wondering if someone could either send me a copy of the code
>or provide an address (ftp/www) where I could locate a copy of the
>morse code alphabet.

First, and FOREMOST (emphasis added, not shouting)... DO NOT, under ANY circumstances, attempt to 'learn' Morse code my reading it from a visual chart!!!!!!!!! (Shouting now)...

Morse code MUST be learned BY EAR for you to be able to use it on the air, and for you to take the Morse code (CW) examination. If you learn CW visually and then attempt to learn it by ear, you will find that you have to perform several unneeded mental gymnastics to do the conversion of the sounds to the written character: Hear the sound, convert it to DIT-DAH, convert it to your visual image, convert it to the character and then (finally) write it down. If you learn CW by ear initially, you hear the sound, convert it to its character and write it down...

I say this because I learned CW visually many years ago, and it was a real pain having to un-learn it visually in order to learn it by ear. Since that time, I've taught CW classes for the past 20+ years and will not allow my students to EVER refer to visual aids... they learn probably 2-3 times faster if they never even have the opportunity to see a written CW character. When I teach CW, the characters are sent at a character speed of 18-20 WPM, but with accentuated spacing between letters, so they have time to think about each character as it is sent. the increased spacing between characters gives an "average" sending speed of 5 WPM. This is generally referred to as the "Farnsworth" method of teaching CW. The students are taught the sound of the character, 5-7 characters each lesson, until they have the sounds of all characters memorized. Then they work on building their speed. As speed grows, all they have to do is to reduce the inter-character spacing to build their speed up to the actual speed at which the characters are being sent.

There are a number of very good CW teaching tools. Some are cassette tape-based, others are PC-based. Ask here and I'm sure you will receive a number of suggestions as to which are the best.

73 (Best Regards), Tom Hammond N0SS

# 4270. Morse code timing needed

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-16 02:56:00 UTC
From: tom.hammond@woodybbs.com
Message-ID: <93.18924.7585.0NFB7C6F@woodybbs.com>
Source record: 254964

SR>Forgive if this is a FAQ (I haven't got it yet) but I need to how
>to 'time' Morse Code; what I mean is, what is the specification for length
>of a dah versus a dit, and the length of the inter-character and inter-word
>gaps?

SR>I saw here once before the entire timing specification; I could sure use it
>again!

Regardless of how long it is, the length of a DIT (the short CW element)
is taken to be one (1) unit of time in length. Then, the DAH (the long
sound) is taken to be three (3) DITs in length. The space between
elements of a single character are one DIT long, the space between
letters in a word are three (3) DITs long, and the space between words
is seven (7) DITs in length.

Hope this helps.

BW>I certainly hope N9CBM doesn't here one of my QSOs, he will blow
>a gasket. There are suggested procedures, but as the years go by
>most operators get relaxed and don't bother with AR, BK and so and
>use whatever feels comfortable. None of it is wrong and using KN
>certainly does not label a person as a Novice.

BW>If my memory serves me, K means over (anybody can answer). KN means
>over to specific person, the person who I am currently talking to
>(and not to anyone). I don't see anything wrong with using KN
>during a QSO. AR, on the other hand, means out, I am finished with
>the contact. Using AR K is not purely correct because the combin-
>ation means out-over.

BW>Anyway, I hope N9CBM doesn't hear me, because I use K, KN, BK,
>dit dit and sometimes nothing.

Listen to Bob... he knows what he's talking about. And he's a good CW
op! I've worked him before!

Part of the problem often stems from newer operators who (seem to) feel
they have to use every available prosign when they operate. As a
result, they end up using a LOT more prosigns that are ever required
during the QSO.

In most instances, a simple "K" is all that's required to pass it over
to the other station. In many instances, and particularly when
operating "full breakin" (QSK), you don't even need anything, you just
take a pause and the other op knows to respond. With QSK, the other op
can even jump in to the middle of your transmission to interject a
comment if he desires, because with QSK, you have the ability to hear in
between your DITs and DAHs, so you know everything that's going WHILE
you're transmitting, and you can take an instantaneous stand-by if you
hear another signal on the frequency.

It used to be that "good" CW operating meant using a lot of
abbreviations and virtually no punctuation. The shorter it took you
to say something, the easier it was to copy. Newer ops generally
didn't realize this, so they often built some "undesirable" habits as

they operated on the Novice bands. But, when they came to the general class bands, they learned rather quickly what was to be accepted and what was not.

This "rule of the road" stayed with us up until CW keyboards came into the forefront of CW operation. Then, just about anyone who could type could send near-perfect CW at high speed. But also, since users were sitting in front of a keyboard much like a typewriter, they no longer felt the need to abbreviate or exclude punctuation from their conversations. All of a sudden we began seeing LONG works spelled out and quotation marks and exclamation marks actually sent on the amateur bands..! Some of us had to return to the books to learn punctuation marks we'd forgotten long ago (or never even learned).

But I digress...

In general, it's more acceptable to keep your transmissions as uncomplicated as you can. This extends itself to how you end a transmission... if you are not having problems with other stations breaking in on your QSO, then there's probably no need to send KN when K will suffice. If you're using QSK or if it's obvious that the other station is an experienced op, you may not even need to send any ending prosign, just take a breath with your fingers and see of he picks it up. If not, then send a K.. it's pretty easy to develope the art of 'feeling out' the other op to see how experienced he/she is and to determine what's gonna be required to keep the QSO flowing.

If you can find it, see if you can get a copy of the QST article titled "Your Novice Accent". It's good reading for just about any new CW operator. It was first published in QST about 30 years (or so) ago, but it was re-published in QST earlier this year, if I recall.

Look for old dumb terminals, like ADM-3's, Televideo 9XX's, Hazeltines,
or even DEC VT-100's. I saw some VT-100's at a recent hamfest for $10.
And they supposedly worked. There were even some IBM 3278's for about
the same. I can't imagine what anyone would want with an old 3278, unless,
of course, you had an old IBM 370 to go with it...

Here Here!

Congrats, Dave! But please don't hate it, enjoy it! Yes, you can get many great contacts with that code, you can! It's my code, too and I think it's music. When I was learning it, we celebrated Sammy's birthday!

Let this not take anything away from Dave's accomplishment. He's the new general. Congrats and hope to see you on the band very soon!

I always thought something like KD6QRM or -QRN would be a horrible callsign, but I wasn't able find any in the callsign database. Either the FCC doesn't give them out, or everyone turned them in for better ones!

Jerry,

First of all, there is an institution called the Buro.
There are quite a few hams, who would have to spend the money
eqivalent to the price of a rig every few years if they
were to QSL directly.

If you want to QSL directly just enclose a SASE, remember though
that if you are sending abroad for direct QSL, you need to
send 2 US$ or 2 IRC's to cover the air postage.

Happy QSO'ing and QSL'ing, 73, Moritz DL5UH

# 4285. A CALL TO ARMS!!

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-16 09:56:21 UTC
From: kevin.jessup@mail.mei.com
Message-ID: <kevin.jessup.214.00266A5D@mail.mei.com>
Source record: 254903

John Magliacane, magliaco@pilot.njin.net, provided a good example of
the bad-press amateur radio gets lately. I've chose to inlcude the
most "caustic" attacks from the article.

The following letter appeared in the December 10, 1994
issue of the "Asbury Park Press" (NJ):

A well-kept secret is that for every amateur broadcasting from
his home, there are several neighbors whose household electronics
are made unusable by radio interference.

"EVERY" radio amateur?? Hardly. I can think of quite a few
cable TV spurs that occur far more frequently in our area.
And quite a few noisy automobile ignition systems that wipe
out an entire block.

When the FCC receives a complaint, it turns it over to a field
office. This initiates the usual charade:
The upshot: The complainants' home electronics equipment and
wiring are declared deficient. End of story.

Never mind the shoddiness of the comsumer electronic equipment design.
Counteract this one by demonstarting how consumer electronics interferes
with other consumer electronics. Easily done.

This exemplifies the damages that one amateur radio operator
(meeting FCC standards) can cause to neighbors' property rights
and home valuations

Never mind what the US Constitution and the Bill of Rights
has to say about EVERYONE's (including the radio amateur's)
rights. Meanwhile, all the yuppies are pleased as punch to
have cellular towers sprouting like weeds in every neighborhood.
(Not that I don't own and appreciate a cellular phone.)

all on the pretext of being a "national resource" in times of
emergency. Yet, amateurs are not necessary in this role, as
emergency governmental organizations funded by our taxes are well
able to provide for their own communications. In fact, amateurs may
well interfere with these local services.

That is totally ridiculous and contrary to reality.

The ARRL had better wake up to the damages and ill will its
members cause.

Let's wake-up the author of this article and the newspapers
that published it, shall we?? Can you all help me with this??

The myth of the amateur as a skilled technologist extending the
state-of-the-art is already extinct.

This is the only one I'll agree with, but only up to a point.

Ok fellow radio amateurs, many of you know how much I argue in favor
of increasing our technical competence, exploring new modulation techniques
and even changing the incentive system to accomplish this. But the vast
majority of the above article it totally bogus. It's time to STAND AS ONE
against this blatant bullshit!

Can some radio amateur or organization near the location
of the "Asbury Park Press" (NJ), demand equal time?! We MUST
counteract this misinformation everywhere it occurs. Even
get on local television if you can. There are numerous examples
recently where amateur radio DID fill an important communications
role in times of emergency. There is plenty of evidence to
support this. (Hawaiian hurricanes, Gulf-coast hurricanes,
California earth quakes, Washington Volcanoes, Midwest tornados,
Midwest and Gulf-coast floods. etc).

Besides disasters, there is the knowledge gained and fun-to-be-had
for young and old in amateur radio. It's a great hobby for all.
It transcends racial, sexual, ethnic and religious boundaries. It's
an excellent alternative to the video games and the idiot-box (TV).
It's EASY to talk up! DO IT!

Dig up any positive news articles or your own photographs.
Contact emergecny government officials who KNOW what we are
capable of or who received our services, FREE OF CHARGE.
Besides this, there are a great many public service events
that we work and receive no press coverage at all. Get
this information into the paper or on-the-air!!

We are partly to blame for this lack of positive press.
Get out there and repair the damage!

Even here in Milwaukee, there was a recent 3-minute news-clip
on local TV (WTMJ channel 4) about amateur radio. It was NOT about
diasters or anything, it was about our technical expertise. While I
DO think the old HF'er that was portrayed and showed his station (with
a monstrous tower and a basement full of boat-anchors, complete
with background CW, QRM and QRN) was well-meaning, the news-clip
painted us as decidedly backward and behind the times. The reporter
talked about the info highway, internet and global communication.
The older gentleman HAM operating the station sort of laughed and
admitted he "didn't care much for that kind of stuff". The newsmedia
closed the segment saying "No information highway for these guys!" or
something to that effect. I have confirmed that this was the
perception of the average viewer who had little or no familiarity
with amateur radio.

I intend to get equal on-the-air time here and counteract the above.
I hope to demonstrate AMSAT (complete with totally automated computer

tracking and file transfer). I'd like to demonstrate how VHF/UHF
linked repeaters and controllers are just as sophisticated as what
is TYPICALLY used in commercial RF. Maybe even multi-media LINUX
running an AX.25 or TCPIP packet link. What I need is cooperation
from other local radio amateurs here in Milwaukee.

Come on people. We have WORK to do.
Put down that mike or key for a while and let's DO it!

Hello OMs. Just to inform you that the pilot of the PAL 747 which had a mid-air explosion in Japan last Dec 11, was a ham, Capt. Ed Reyes, DU1ERV.

Only one Japanese died among the 273 passengers. 6 were injured. The plane with a crew of 20 made a very safe emergency landing in Naha airport (Okinawa) roughly 30minutes after the explosion. The flight was from Cebu, Philippines to Tokyo, Japan.

Capt Ed Reyes was praised for his very good handling of the situation.

Mabuhay from Philippines.

It's more normal to exchange QSL cards via the bureau, unless you need the card urgently for an award or certificate. In my case, the bureau is the RSGB's QSL bureau. In your case, the ARRL's.

But don't hold your breath - I regularly get cards via the bureau for contacts dating back to when I was first licensed, over 14 years ago!

[ deletion ]
: Jeff NH6IL

I'm pretty sure that's why the International code was made, because
European telegraphy started with the idea of machine decoding ( someone
earlier in this thread said that Morse intended machine decoding, but
I doubt this) where the additional spaces were an unnecessary complica-
tion. I have no idea how the punctuated period got into it in the
first place. The word STOP was frequently put into telegraph messages
for punctuation, and meant the English full stop( American period), and
not any instruction to an operator!

# 4295. Re: HELP Santec HT1200 programming?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-16 12:39:59 UTC
From: michaela@freenet3.scri.fsu.edu
Message-ID: <3cs1qv$kse@freenet3.scri.fsu.edu>
Source record: 254989

Hi, Jim [WB5AOX]--

It has been so long since I've used my Santec HT-1200 I couldn't remember, hi. So here is what the instruction book says [remembering that it was written by someone whose primary language was not English!].

FREQUENCY SET.

In the FREQ position of the FREQ/MEM switch, key buttons [0 thru 9] are pressed in order of: MHz, 100 kHz, 10 kHz and either 0 or 5 kHz when required [press 5], at this time these numbers are indicated on the LED except for 5 kHz. Now press the key "SET." The decimal DOT of the MHz is turned on and the frequency set is completed. If a frequency ending in 5 kHz was selected, the display will indicate with a decimal DOT at the right end of the display.

[Sounds like you are okay up to this point. The following is what you probably really want.]

FREQUENCY SET ON MEMORY CHASNNEL

To set other frequencies into memory, first set the desired frequency using the FREQ position. Second, slide toward MEM position and push the MW button. Next, push the memory button you desire between M1 and M0.

To call a memorized frequency, simply push the memory channel button when in the MEM position.

Well, that's it. You can evidently set ten memorized frequencies [M1 thru M0.] It takes a little knack to catch onto it and I used my HT-1200 so very seldom, I always had to drag the instruction booklet along with me as a refereshser, hi.

Hope this helps. BTW, is Santec still in business. They used to have there USA quarters in Plano, TX, if my memory serves correctly.

73,

-mike-

|>

Hi Jerry. I like to exchange those cards too. Seems like its a
part of the hobby thats fading into the past though. I think its
just not done as much as it used to be.

I never use the 19 cent rate anymore because of the condition of
the cards that are returned as undeliverably. They look really
bad and I dont want my cards to arrive at their destination looking
like that. I put em in an envelope and use a 29 center. On cards
sent that way, I seen to get about 45 percent return QSLs.
(I also only work CW, SSB rates may be different). I have found that
if you need his card for awards, etc. you should send a SASE. On
cards sent that way, I get returns from about 85 percent. The
percentage is about 95 for contacts made in contests.

All this only applies to U.S. contacts. A different set of rules
are used for DX cards. Im still learning them, and not improving
much <sigh>.

# 4297. Help - Building CW Decoder

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-16 13:05:14 UTC
From: jtesta@freenet.columbus.oh.us
Message-ID: <3cs3aa$71h@acme.freenet.columbus.oh.us>
Source record: 254991
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc

Hi, I purchased a back issue (apr '94) of Shortwave Magazine. It had
a project to build a CW decoder. I am a newbie at reading schematics and
the only thing i have built to far is a practice code oscillitor.

Anyway on reading the article, i get the drift of it all except for the
following:
1. on page 26, What is SK1, SK2, SK3?

2. How do I connect it up to my computer? I realize it must be via
RS232 port either 9 or 25 pin but which pins? ( i have both
so either is ok).

3. and the negative pole of the battery gets connected to ground?

4. The article says the relay is s.p. d.i.l , I got the sp
single pole but what is the dil?

5. What might be a good source in the US for the relay and the IC
NE567?

Thanx in advance.

Joe, n8xct

>>specific station.

>No, this is not necessarily true. AR means `End of work'. An example
>of how this would be used is as follows:

No...SK means "end of work".
"End of work" meaning, "finishing this QSO" (or transmission).. It's in
the ARRL handbook, also in the operating manual :)

><Text of some message> AR <your comments, possibly with regard to the
>message> BT xxxx DE NH6IL K (or KN if you don't want anyone else to
>break in, such as within a net).

>So the prosign AR is supposed to be a seperater; as used above it
>seperates the text from your comments.

That is not how AR is currently taught, or used. It is used to turn the QSO
over to another person, the equivalent of saying "Over to you, KB7QOP" on
voice. Maybe the way you speak of is how it was used in the past, but today
it is used the way I have described.

>>K means "Any station transmit". It invites anyone listening to respond.
>>
>>KN means "Specified station only, transmit". It is used when you're talking
>>to a specific person and only want them to respond.

>Such as within a net where several stations might attempt to call
>you after you've ended a transmission.

Exactly

>>There is, generally, no good reason to combine the prosigns (ie, AR K)
>>I sometimes do it because I like the rhythm of it...it's not necessary though.
>>
>>In practice, AR and KN are often interchanged.

>They shouldn't be.

Technically, maybe not. But on a practical level, it doesn't really matter. Your definition of AR is a little off: the ARRL handbook, for example, provides the following chart (which correlates nicely with everything I've read or heard regarding the way the code is used):

Voice Code Meaning

Over AR After call to specific station
end of message AR Self-explanatory
wait, stand by AS Self-explanatory
roger R All received correctly
go K Any station transmit
go only KN Addressed station only
clear SK End of contact
closing station CL Going off the air

Lookin at that context, AR and KN can be interchanged, though AR is supposed to be used after the call of a specific station, whereas KN is to be used to mean whatever station was previously being addressed.

Take a look in the current publications, and you'll see what I'm talking about :)

73's and happy holidays!

In article <3cq6n0$ohq@pilot.njin.net>, magliaco@pilot.njin.net (John Magliacane) writes...
<snip>
>When the FCC receives a complaint, it turns it over to a field
>office. This initiates the usual charade: The field office explains that
>the amateur operates within the FCC standards and then the American Radio
>Relay League - which is the union of members - offers to help. The upshot:
>The complainants' home electronics equipment and wiring are declared
>deficient. End of story.
<snip>

Ya know, it's really sad that the writer of this can follow through the above (FCC investigates, amateur meets FCC standards, home owner's equipment doesn't), and decide that the amateurs are at fault.

In other words, this person wants us all off the air. End of story.

The fact that his stereo manufacturer doesn't follow good engineering practice simply doesn't apply to the argument.

John, if you can supply an address for letters to the editor, I'm sure a few of us would be willing to enlighten them.

On the face of it that's quite true but...twitiness is a
sadly neglected area of social research so it remains poorly
defined <tongue firmly lodged in cheek>. Are twits twits _all_
the time or only periodically? Is twitiness a genetic condit-
ion implying a lack of control on part of the twit, or, a
learned behavior fully under the twit's control? There are
many questions to be answered as you can see.

>sex, religion, crime racial problems, the government, the media, etc.,
>etc., ad nauseum so that we can be "noticed."
I think this is the nut's meaty substance. In elder times,
hams actively policed their bands. And, given the small
number and closeness of the community, it was pretty easy to
finger the culprit and bring he/she to justice. Everyone
knew this so you risked a lot by doing something flagrently
stupid over the air. And there can be little dispute with
the point that hams used to be far more knowledgable about
radio technology than they are now. The vast, overwhelming
majority of modern hams are `appliance operators' <he said
blushing>. The QRPies with their tuna-can rigs and the
high-band experimenters are nearly the only exceptions
left.

As for why these people do these stupid and often dangerous
things: I can only speculate but pass on the opportunity.
Perhaps someone should be asking those who get caught.

> What a shame that our hobby (and even worse, our society) has
>degenerated in this manner. It seems that, rather than reaching upwards
>to try and improve, to strive for excellence, a large segment of
>Americans are satisfied to drop down to the "lowest common denominator"

How sadly true.

> Just my opinions, of course; no flames intended toward anyone in
>particular. And I don't have a "quick fix" for what I've described
>because I don't think there is one.
None taken. It was a very thoughtful post. And, I agree:
there is no easy solution. Though I hope we don't `roll
over' and give up. Patience, diligence and good 'ol pig-
headed stubborness can nail at least *some* of these
peckerheads and make them damn good and sorry they tried
farting around with the ham bands.

## 4302. Tuning up

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-16 14:18:31 UTC
From: smithson@ACM.ORG
Message-ID: <3cs7jn$pk3@hopper.acm.org>
Source record: 254994

Hi All

Last night I was heading to a VE session with some friends of mine. While en route, one of my friends was quizzing his son preparing for his novice test.

One of the questions has to do with tuning up a transmitter. The question is something like when tuning up your transmitter, you should, tune up on 40m and then move to the band you want, tune up into a dipole fed with open line, etc. etc. The correct answer is tuning up into a dummy load to keep from transmitting an unneeded carrier.

My question is, what good it is to tune up into a dummy load? I thought the purpose of tuning up was to match your transmitter with your _antenna_, and your tuner would have to _see_ the antenna to do that!

What am I missing?

73!

-Brian

# 4303. Re: Cheap Packet Term

>QWERTY keyboard, an rs-232 port, and a reasonable amount
>of space on the screen... A printer option of some sort would
>be appreciated, too. The HP-95 is a contender. How about
>sources for used old-time laptops?

You've just described a *terminal*. There are millions of them,
most tucked in dusty corners, just waiting for you to come along
and pick them up. They're the things *Terminal* Node Controllers
(TNCs) were designed to work with. They go begging at hamfests, if
you can't actually get a dozen or two for free at your next hamfest,
at least you won't have to pay more than $5 or $10 for one.

My favorite is the old Televideo 950 (which has a printer port,
and the *perfect* keyboard), but an ADM3 or Qume or Dec VT52 or
VT100 will fill the bill just fine. If you want a small *printing*
terminal, then the TI Silent 700 was just made for you, or you could
go with a LA36 Decwriter if you've got a bit more room.

Gary

Message-ID: <9412170710433671@ectech.com>
Source record: 254996

Jane - please also look at products made by STANDARD. Their dual-band HTs definitely belong on your "Top Five to Consider" list!

Once you have a price limit established, it's pretty much "subjective" time, Jane! All these modern, high-end units will do all you need in the real world. How do they "feel" in your hand? Can you easily get through the manual without a salesperson going home with you? Look around the dealer's shelves - what accessories are instantly available?

Warranties are all about the same - so get to your local dealer and play with a couple of these fine HTs!!!

# 4305. Grunged Message Deleted

Newsgroup: rec.radio.amateur.misc

From: Bogie Bugsalewicz <Bogie.Bugsalewicz@f7009.n124.z1.fidonet.org>
Message-ID: <787590406@f7009.n124.z1.fidonet>
Source record: 254889

This is to inform you of what seems to be a discrepancy between a message from
your system and the currently accepted specifications for echo mail.

Because the message appeared to be grunged, or a dupe, it was deleted in order
to protect the rest of the echo mail distribution system. This copy is sent
to you for information purposes, to help you find the source of the problem
and fix it.

If you are running Gecho 1.10, please obtain the 1.11 fix at your
registration site. 1.10 has a bug in it that grunges the headers and causes
problems with some other mail tossers.

The discrepancy noted in the message, as received here, was:

1) The number of ORIGIN lines (2) exceeds the maximum of 1.

The message was in the RADIO.AMTR.MISC area.

Local Ham Radio Operators Sponsor National Event In Monterey

On Saturday, January 21, 1995, from 7am to 2pm, local ham radio operators, along with the Naval Postgraduate School Amateur Radio Club, will host the 6th Annual WINTERFEST, a regional gathering of ham radio operators from all over the West Coast.

This event, free to the public, will be held in the College Center at Monterey Peninsula College. WINTERFEST will feature displays, contests, and demonstrations of amateur radio.

In attendance will be representatives from the AMATEUR RADIO EMERGENCY SERVICE (ARES), the folks who handle emergency messages during earthquakes and other disasters, the MILITARY AMATEUR RADIO SERVICE (MARS), the folks who keep families in touch with the troops during operations like `Desert Storm', and representatives from the AMERICAN RADIO RELAY LEAGUE (ARRL), the nation-wide organization of Amateur radio operators. Members of the club will also have booths to answer any questions about ham radio. For those interested, there will be information on classes, to help folks pass the exam to become an amateur radio operator

Directly on the site, organizers will set up a `special event' amateur radio station, operating on emergency power. This station will make 2 way contacts with other ham operators, all over the world, in celebration of the event. Visitors may send, non-commercial, messages any where in the world, at no charge, through a digital radio network called PACKET. PACKET is a voluntary network of local hams, all over the world, who use computers to automatically transmit, receive and relay messages to nearly every place in the world.

Demonstrations will include, classes on the Internet, how to become an amateur radio operator, how the amateur radio emergency service works, how to bounce radio signals off satellites and the moon, amateur television, Morse code and voice transmissions.
State-of-art equipment will be on display and demonstrated. There will also be a flee market that will include venders from all aver the country.

WINTERFEST is an event sanctioned by the American Radio Relay League (ARRL), the nationwide organization of ham radio operators.

The Naval Postgraduate School Amateur Radio Club, which represents only a portion of licensed ham radio operators in Monterey County, has over 250 members.

The question is partly obsolete. It assumes tube finals (either in the
rig, an amplifier, or both). First one has to tune the rig to
match 50 Ohms, and then tune the tuner (if antenna is not matched) for
low SWR (even at low power). With solid state finals the questions
does not make sense.

>
You are assuming you have a radio that is at least CLOSE to being
matched to a 50-ohm load. Sure, with "modern" solid state equipment,
the radio's consider "broadbanded" in that you need not tune the
output circuits.

However, in tube-type equipment, or whenever you have tube finals, you
must check the bias current on the tubes, peak the Drive, dip the
plate current, and then peak the output and reduce the drive so
you don't melt the tubes.

Do you really want to do this into a load of unknown impedance? Many
antenna tuners, cables, and other systems are wired for 50 ohms.
Most radios are happy with 50 ohms. Thus you use a 50-ohm dummy
load and THEN use the tuner to do the matching, or just tweak the
radio's tuning circuits once you're in the ballpark. Usually, though,
a tube-type rig won't be able to tune much beyond the 25-150 ohm
range (guessing about this, but it sounds right from my reading).

What a great series, Jeff. I really enjoy reading about the old 500khz operations. I've heard only two SOS calls in my life. One was the Torrey Canyon off France (monitored from a drill ship near Greenland) and the other was a scrap iron ship between California and Hawaii monitored from a Chevron tanker (delayed us from arriving in Hono in time for my wife to be there to meet me for Xmas).

Yes, ships are still using cw a lot and not surprisingly when you factor in the costs of satellite communications systems. Intelligence agencies still use it for covert communications with agents-in-place. It is unlikely that such uses will die out completely.

FOR IMMEDIATE RELEASE

16 December 1994

For further information, contact:
Scott Ehrlich
wy1z@neu.edu

THE AMERICAN RADIO RELAY LEAGUE'S WORLD WIDE WEB PAGE

Thanks to the effort of Scott Ehrlich, WY1Z and the Boston Amateur Radio Club, Scott has put together the ARRL's world wide web page.

Since the ARRL does not yet have web capabilities of their own, this page is being offered on the same site as the Boston Amateur Radio Club's web page.

The address to access the page is:
http://www.acs.oakland.edu/barc/arrl.html

If you do not have command-line or graphical Web capabilities, and still wish to visit the page, you can visit it via electronic mail:

1. Send a message to: listserv@info.cern.ch

2. Ignore the Subject line

3. In the body of the message, type:
send http://www.acs.oakland.edu/barc/arrl.html

For help with the other commands available for webbing via email, in the body of the message, type: help

It has pointers to the ARRL Letter, e-mail addresses of HQ staff, official League bulletins, and much more!

> 
> Jeff NH6IL

And you're worse than having a memory failure. You yourself are the one responsible for the address cited above. The last time someone complained about your reply address not working, you suggested that they (we) send a note to the sysadmin since you couldn't fix it yourself.

On mail bombs. A mail bomb is a large file, usually an uuncoded core-dump, sent to a user with the desired effect of overloading or halting the mail system. Sending compressed and then uuencoded termcaps files or converted to postscript binary images of a can of Spam(tm) to the people at the Green Card Lottery comes to mind.

Sending a note to your postmaster asking that your mailing system be "adjusted" for proper operation is hardly an e-mail bomb. Asking others that have experienced the same problem to send e-mail is hardly advocating an act of "e-mail terrorism".

As usual, you have over estimated your importance in the cosmos. Oh, and thanks for the mail to my sysadmin this morning. I got the message that "One of your friends has left you a present on the carpet again."

I personally have to say that I LIKE my own call pretty well. Not too repetitive, and a REALLY good beat on CW. Plus it's SHORT - at my comfortable speed, it takes about 8 seconds to send it 4 times!

Of course, DX often think I left something off the end, but...

Another REALLY good call? U. of MD ARC is W3EAX (echo alfa xray), which looks cool, sounds good on phone AND CW...

One more - Hugh Turnbull, Atlantic Div. Director, is W3ABC.

A bad call? My friend Alex, WX3Q. Short and pretty ugly in any mode. Another? My friend John, WB3GXW (he doesn't even try CW anymore :-)

# 4326. CB RF Interference Update (Longish)

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-16 18:45:01 UTC
From: John.Senko@emich.edu
Message-ID: <3csc7d$b3t@sefl.satelnet.org>
Source record: 255019

Since I seem to have caused quite a bit of discussion and have received a lot of helpful advice (at least 25 to 30 email messages, mostly from rec.radio.amateur.misc readers), I thought I should post back the results so far.

The problem, in case you missed the original post, is that I've been picking up a neighbor with a CB radio on my stereo and telephones. One thing I've learned is that he is using a CB in AM, rather than single sideband, mode, since I can understand what he's saying very clearly. Although I've been cautioned that interference does not necessarily mean that the fellow is illegally overpowered, the extent of the problem and the fellow's on-air demeanor still have me convinced that he is overpowered, and further contact with the FCC (with cc to my local congressman) is still an option.

Many of the responses included the suggestion that I contact a local ham operator or club. One guy sent me his brother's phone number and we had a nice chat from which I learned a lot. Another fellow led me to the server at buffalo.edu, from which I was able to download a list of all the licensed ham operators in my city (Farmington Hills, MI, USA). Oak.oakland.edu also has some archive stuff from the ARRL and I was able to get a list of clubs in Michigan.

Regarding actual solutions to the interference, I've been concentrating on getting the stereo cleared up first, mostly because we use it more often and not all of the telephones are affected (mostly the cordless, which, I've been warned, may be a lost cause). This may end up taking a while, since I can only work when he is transmitting AND I have time to putter. The components consist of separate preamp, tuner, power amp (all Adcom), a cd changer and VCR (both Sony). Many of the suggestions had to do with the speaker leads from the power amp acting as an antenna. I got some ferrite chokes (he said, as if he knew what he was talking about) at Radio Shack and put them on the speaker leads (14 gauge zipcord, for the technically minded) which, coincidentally, I replaced. No luck. I had known that the interference is independent of which input is being used and comes after the volume control. Further experimentation showed that the power amp is definitely not the culprit. One weird thing I found is that I have the tuner power cord plugged into a switched outlet on the back of the preamp and that makes the problem worse, so I put a ferrite choke on the power cord. The prime suspects right now are two pretty tacky looking patch cords going from line-out to line-in jacks (for a signal processor) on the back of the preamp. Last evening, replacing these with the somewhat cooler patch cords I'm using for everything else either cleared up the problem or the Diesel Doctor went off the air, it's hard to tell. Anyway, at least

I've got it narrowed down to one piece of gear and have several things to try.

I'm going to be off line for the next couple of weeks. I'll post further results then.

Again, many thanks to all who responded.

John

Good morning. It's Sunday the 18th of December and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Now this week's headlines:-

The President of the Qatar Amateur Radio has visited the RSGB, RSGB Headquarters is open during the Christmas holiday, and we bring you our traditional Review of the Year.

On Thursday, the 8th of December, RSGB Headquarters hosted a visit by His Excellency Mr Abdullah bin Hamad Al-Attiyah, the Minister for Energy and Industry of the State of Qatar. He is also an active radio amateur, A71AU, and is the President of the Qatar Amateur Radio Society.

His Excellency was met by RSGB President-Elect Clive Trotman, GW4YKL, and General Manager Peter Kirby, G0TWW, and was then given a tour of the HQ building. He had the opportunity to meet staff and see first hand the workings of the Society. He took an interest in the production of Radio Communication, spent a considerable time in the Museum and Library, and concluded the visit operating the HQ station, GB3RS.

For those needing to call at RSGB Headquarters or make a telephone enquiry during the holiday period, HQ will be open for business on Wednesday the 28th, Thursday the 29th and Friday the 30th of December.

The Chelmsford beacon, GB3CMS, on 10.36896GHz, returned to service on the 3rd of December.

The Salisbury UHF repeater, GB3SW, will be off the air until mid-January for engineering work. The keeper, G4YRV, regrets any inconvenience to users.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Barbados, G3VBL will sign 8P9EM from now until Thursday the 12th of January, concentrating on CW on the WARC bands.

From Pukapuka Atoll in the North Cook Islands, ZL2HU will sign ZK1KH until the end of January 1995. Activity will be on all bands, using SSB.

From the Maldive Islands, I4ALU will sign 8Q7BX from Monday the 26th of December until Friday the 6th of January. Activity will be on all bands CW only.

There's one item of HF contest news:

The RSGB Affiliated Societies Team Contest takes place on Sunday the 8th of January from 1400 to 1800 UTC. The rules can be found in the December edition of RadCom.

There's one item of VHF contest news:

The RSGB 70, 144 and 432MHz Fixed Station Contest takes place from Monday the 26th to Thursday the 29th of December inclusive, from 1400 to 1600 UTC daily. See November's RadCom, page 78 for full details.

And now the first part of our annual review of the past year as brought to you by the RSGB's GB2RS News Service. We are very grateful to newsreader Vic Kusin, GM4HCO, for researching and compiling this review.

This week we deal with January to June, and the Bulletin for Sunday the 1st of January will cover July to December.

The RSGB's 1994 President Ian Suart, GM4AUP was formally installed at an evening reception and dinner held in Glasgow on the 15th of January. In attendance were representatives of the French, Belgian, Dutch and German national societies. In his address, Ian spoke of plans to hold more regional meetings where members could meet and question officials of the RSGB.

The 1994 New Year Honours list mentioned several radio amateurs. RSGB Propagation Studies Committee member Professor Les Barclay, G3HTF, received an OBE in recognition of his work in the field of propagation. RSGB member Donald Michael, GM0KCY received an MBE in recognition of his work as a Principal Lightkeeper with the Northern Lighthouse Board. Another RSGB member, Andy Watts, G4VIW, received an MBE for services to the Institute of Plumbing.

At its January meeting, the RSGB Council elected Clive Trotman, GW4YKL, as the Society's Executive Vice-President for 1994 and Peter Sheppard, G4EJP, became Chairman of the Membership Liaison Committee, which deals with the Society's service to members.

At a meeting of the Association for Science Education at Birmingham University an organisation known as STELAR was formed. STELAR, which stands for Science and Technology through Educational Links with Amateur Radio, is a group of educationalists whose aim is to promote amateur radio as a means of supporting good practice in the teaching of science and technology. STELAR's chairman is Richard Horton, G3XWH.

In February, the Scarborough Amateur Radio Society presented Jim Lynch, G0NXX, with the Fred Powel Trophy for working 225 DXCC countries, all on CW using 80 watts to a Ground Plane antenna.

Thinking Day on the Air took place over the weekend of 19 and 20 February. Guides and Brownies all over the world communicated with each other via amateur radio stations and, as usual, many governments relaxed their third party message restrictions for this event.

The Yeovil Amateur Radio Club operated a special event station, GX3XMH/P, on the 40th anniversary of the first sky-wave contact with a

transistorised transmitter. The 1994 station, using a single transistor running just twelve milliwatts, made 18 contacts, the best of which was at a distance of 260 miles.

March saw an RSGB Supreme VHF/UHF Award issued to David Bullock, G6UWO. This coveted certificate was awarded for obtaining three Senior awards between October 1990 and March 1994 for contacts with 60 counties and 15 countries on 144MHz, 40 counties and 9 countries on 432MHz and 40 counties and 6 countries on 1296MHz.

Brian Underdown, G7LIJ, gained the RSGB 144MHz award for having confirmed contacts with over 100 squares and 20 countries. What makes this really remarkable is that his certificate was endorsed: 'All contacts to achieve this award were effected during the first year of being licensed'.

In April, amateur radio was featured on the BBC TV series 'Why don't You?' The broadcast, aimed at young people, presented the hobby as modern and exciting, featuring everything from crystal sets to packet radio. Members and friends of the Rishworth School Radio Club in Yorkshire were heavily involved in the making of the programme. Emma Constantine, 2E1BVJ, in which she described her enjoyment of radio, both at home and at the school radio club.

The 23rd of April was International Marconi Day - held each year on the Saturday nearest to the birthday of Marconi and co-ordinated by the Cornish Radio Amateur Club. 1994 saw the biggest event to date, with over 35 special event stations taking part from around the world, including GB0IOW from Alum Bay on the Isle of Wight, described by Marconi as "the World's first permanent wireless station", GB1IMD, using amateur satellites, operating from a Marconi factory in Leicester, GB2IMD from Rathlin Island, Marconi's site in Ireland.

There was amateur operation from the liner RMS Queen Elizabeth II during its world cruise which ended on the 28th of April. The station was set up and operated by the ship's medical officer Dr Andrew Eardley, G3UXO/MM. Using a marine HF magnetic loop antenna, Andrew operated for seven weeks on 15 and 20 metres, logging a total of 338 QSOs.

Celebrating the official opening of the Channel Tunnel on Friday, the 6th of May were special event stations GB0CT, at New Romney near Folkestone, and TM5TSM, at Wimereux near Boulogne. The stations had a two-way amateur television link and the Chairman of Shepway District Council, G0BPS, spoke on the air to the Mayor of Wimereux.

Amongst the news items in the May edition of the RSGB's Radio Communication magazine was one concerning Cheshire Raynet members who, whilst walking on Clwyd mountains, came across an injured boy. They raised the alarm via the GB3MP repeater and the emergency services quickly responded and took the boy to hospital, where he has made a full recovery. The three heroes were Anthony Lewis, G6LBC, Graham Pemberton, G7NEH and Peter Baston, GW0PJA. Cheshire's County Emergency Planning

Officer commented that the three "had undoubtedly saved Alfie's life" and that this was the quality of response that he had learned to expect of the Raynet group.

A dedicated group of amateurs from North Wales and the Wirral were awarded a prestigious award for outstanding services to amateur radio in the Republic of Ireland. Tony Jones, GW4VEQ; Martin Vernon, GW6HVA and Dave Fernant, G4PGO were awarded the Pat Conway Memorial Cup for designing and building a packet radio mail link which allows amateurs all over Ireland to connect into the European and World-wide packet radio networks. The award was presented by the President of the Irish Radio Transmitters Society Jim Ryan, EI3DP at the IRTS Annual General Meeting in Donegal. This is the first time that this award has been made to non Irish nationals.

The STELAR Group reported that their first crash RAE course for teachers was a great success. The week-long residential course was sponsored by Trio-Kenwood UK and was held at their Watford Headquarters. The training involved both practical and theoretical aspects of amateur radio. Fifteen teachers took the Radio Amateurs Examination on 9 May. They are expected to use amateur radio as a classroom aid.

During May, the number of RSGB-registered Novice Instructors topped the one thousand mark. Many instructors had commented that their reward was hearing their students using their new callsigns on the air and obviously enjoying every minute of their new found hobby.

Britain's amateur satellite organisation AMSAT-UK donated 68,500 to enable the AMSAT Phase 3D team to obtain a higher capacity battery, which is expected to prolong the life of the satellite transponders to between 10 and 12 years. Phase 3d is a new type of satellite which should bring space communications within the reach of the majority of the world's amateurs. It is due for launch in 1996.

On Saturday, the 4th of June the RSGB HQ held its annual open day. Despite continuous rain, everyone who attended enjoyed their day, meeting the HQ staff and visiting the QSL Bureau, the shack and the museum. Next year's HQ open day is scheduled for Saturday the 22nd of April 1995. If you haven't been to the Headquarters s building, put this date in your diary now.

Many special event stations commemorated the 50th anniversary of Operation Overlord, the D-Day landings which marked the turning point of the Second World War.

Memories of the 1994 National Field day will be of rain-soaked teams and tents. The 4th and 5th of June was, reportedly the wettest weekend the event had experienced for 30 years. Record breakers, Reading and District Amateur Radio Club, G3ULT/P secured their fourth consecutive victory in the Overall and Open sections, winning the NFD Shield and G3YF Memorial Trophy. In the restricted section, Gravesend RS, G3GRS/P, were the winners. The low power section was won by the Echelford Amateur

Radio Society, G3UES/P.

Over the weekend of 16/17 June, many clubs and individuals used GB calls from lifeboat stations in order to help raise money for the 25th Anniversary Appeal by the Worked All Britain Group. 10,000 was needed to provide a lifeboat for the RNLI. To qualify for the WAB Lifeboat Award, stations should have worked 10 of the special event stations active during July.

Members of the Central Lancashire Radio Club used Very Low Frequency radio from 1,000ft underground to connect with GB4CRO on the surface. With special permission from the Radiocommunications Agency, the group used an 87kHz 'Molephone', loaned by the Cave Rescue Organisation, to link to an HF station via an interface built at Lancaster University.

The first 10GHz moonbounce contact between two 'G' stations took place on 19 June, when G4RFR in Wimborne, Dorset made contact with G3WDG in Rushden, Northants. Good reports were exchanged and both stations were able to hear their own echoes. G4RFR is the club station of the Flight Refuelling Amateur Radio Society and the moon bounce system comprised a 4 metre dish and a 15 watt transmitter. G3WDG's station was using a 3 metre dish and a 40 watt transmitter.

And that concludes our review of the first half of 1994, as reported by GB2RS.

And now the solar factual data:

The period from the 5th to the 11th of December saw solar activity at very low levels. Despite an increase in sunspot numbers, only one flare, a B8/SF, was reported on the 7th. Geomagnetic activity remained quiet.

The sunspot indices increased, particularly towards the end of the period from 14 on the 5th to 85 on the 11th. The mean for the period was 50. Solar flux levels averaged 84 units for the period, increasing from 78 units on the 6th to 95 units by the 11th. The electron fluence levels are still high to very high and have affected some satellites with electron static charging. The X-Ray flux has also increased from A2.9 units on the 6th up to B1.2 units on the 11th, giving an average of A5.5 units for the period. The 90 day solar flux averaged 82 units on the 11th of December.

Geomagnetic activity was mostly quiet, but increased to unsettled conditions on the 6th with an Ap index of 16 units. The 10th was the quietest day with an Ap index of only 5, and the period averaged Ap 9 units. The state as been 'nil, nothing to report'. For the period from the 29th of November to the 5th of December, the aa indices, as reported by the British Geological Survey, averaged 25.7 nanoTeslas which is about K3. The most disturbed day was the 2nd with a daily index of 45.4 nanoTeslas, about K4. November's geomagnetic Ap index was 12, with the May smoothed level being 17.8

I'll repeat the figures: Spots - 50, Flux - 84, Ap index - 9, X-Ray flux - A5.5. November magnetic Ap 12.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 2nd to the 8th of December, averaged 7.3MHz, with the 6th being the best day at 7.9MHz. The darkness hour lows averaged 2.4MHz. Spread F was reported for 9 hours, lasting from 20.00 on the 6th until 05.00 the following day. The highs are taking place mostly around mid-day and the darkness hour lows between 05.00 and 06.00.

I'll repeat the figures: Highs - 7.3MHz, Lows - 2.4MHz.

And lastly the solar forecast:

Solar activity could well increase this coming week as the more active side of the sun will be looking our way. Solar flux levels are expected to be into the 90s. Geomagnetic activity is expected to be at mostly quiet levels especially midweek but may increase to active levels by next weekend due to the passage of a coronal hole. Ionospheric MUFs during daylight hours in the south are expected to be about 24MHz, and for the north 20MHz. Darkness hour lows are expected to be at about 8MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor November and G7 Tango Whiskey series, and Novice calls in the 2 0 Alpha Juliet and 2 1 Delta Oscar series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

>Amateur Radio Operators.

There are, what, half a million hams? If all of them were to decide that $10 a year was worth it (not a chance), that's $5M a year, not really "several" million. The FCC could easily find several buyers who'd each pay multiples of that for all of our spectrum, and the FCC would be able to collect all that money at once instead of having to process half a million checks (and take 10 weeks per check ;-).

And of course there's the fact that the federal government is not set up to directly reward a service for collecting money; even with a license fee, our influence would still be primarily how much we spent on lobbyists, not licenses.

This is exactly what I was saying a while back in the post titled
"The end of Ham radio"...

Yeah, I agree that the viewpoint expressed in this article is probably
extreme end of the spectrum, but it is also the one held by lots
of cell phone vendors and others licking their chops for our real estate
on the airwaves. We better get off our duffs and make ourselves
useful. Wayne Green is right!!!!

Best callsign? One of the coolest I've run across recently is the
one used by the Novice/Technician station at the Nashua Area Radio Club's
field day site this year in Hollis, New Hampshire.

The two were quite a pair; NARC always gets permission from James
to sign "Number 1 New Hampshire".

The novice/tech station this year was using Tom's cool CW call: N1JWA.

Does anyone know roughly how long a while is?

As seen in someone elses .sig, and paraphrased thusly:

A "while" is almost always sooner than "never".....

I'm not sure if I like their answer more or less than mine--both are irritating and imprecise.

Smile--Just be sure to bug them after a while.

(Gads, I really do need a weekend--I'm getting too silly!)

: antenna to do that!
: What am I missing?

As far as my rig goes, tuning up into a dummy load gets you 95% of the way there. The rest is just tweaking the plate/load/preselect knobs on the air. You tune the rig for the frequency in use - it assumes a reasonable match. If your antenna is wildy different from a 50 ohm impedance you'll need an antenna tuner to handle tuning out the reactance of the antenna. Tuning the output circuit of an xmitter isn't going to help tune to a bizzare antenna. The rig needs to see a reasonable match - the tuning of a tube rig is to get the final stages resonant at the freq. of interest, not to tune to the antenna at that freq necessarily.

: 13.8 V, 5.2 A and "features a built in cigarette lighter socket and is
: excellent for use with handheld tranceivers . . 6"x3"x8", 6 lbs

: Also, they have a Zurich 12V, 3 A power supply that I have on order
: that does not require a flitered cord, just the jack to fit your DC input
: and two leads to connect in.

: Good luck! Dave AB7FV

But remember, if you run high power on the FT-11 without a cooling
mechanism, you can cook it. Yaesu even cautions about using the
higher voltage batteries and making long transmissions. That's why
they don't offer a simple, inexpensive power cord for 12v sources.

Subj: geoclk60.zip - World map w/day-night terminator,times,EGA/VGA

I have uploaded to SimTel, the Coast to Coast Software Repository (tm),
(available by anonymous ftp from the primary mirror site OAK.Oakland.Edu
and its mirrors):

SimTel/msdos/graphics/
geoclk60.zip World map w/day-night terminator,times,EGA/VGA
geoxtr60.zip GeoClock - extra maps, ZIPcode database

GeoClock 6.0 - sunlight clock for EGA, VGA, and SVGA. The current sun
position is displayed, and the parts of the earth in sunlight and
twilight are highlighted, with local sunrise/set and times around the
world. Over 200 maps and a spinning globe are available.

This version has several major new features:

1. GeoClock has a new Gazetteer feature that accesses the GeoSetup data
bases to locate cities.
2. The HAM package can access the Buckmaster "HamCall" CD-ROM to provide
kilometer accuracy for US call signs.
3. The GeoSetup program now tests your system for a VESA compliant SVGA
adapter.
4. The three data bases (US cities, World cities, and US zip codes) that
GEOSETUP uses are separate from the program itself, so that upgrades do
not overwrite the zip code data, and so that other programs can access
the data bases.
5. Miniature icon bar (ALT or ICONSIZE command).
6. Control of the active area for zoom (ZOOMFRACT) to prevent zoom to areas
too close to the screen edge, and to allow map to map lateral zooming.
7. Global Include (GI or GINCLUDE)

geoclk60.zip has replaced geoclk51.zip.

Hi Brian, didn't you know that all antennas are 50 ohms? How else
can you get a 1:1 SWR?

To interfere as little as possible, I always tune up on the border
frequency between digital and voice modes, e.g. 7.15 MHz on 40m.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 16/2330Z DECEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 16 DECEMBER AND FORECAST FOR 17 DECEMBER - 19 DECEMBER
---
1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 93/38

GOES satellite data for 15 Dec
Daily Proton Fluence >1 MeV: no data
Daily Proton Fluence >10 MeV: 1.2E+04
Daily Electron Fluence >2 MeV: 9.4E+06 (normal)
X-ray background: A9.5
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
17 Dec 18 Dec 19 Dec
Activity Low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 17 Dec: 93/38

---
2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: mostly quiet to unsettled.

Estimated Indices : A K Observed A Index 15 Dec
Learmonth 13 3233 4321
Fredericksburg 16 15
Planetary 16 16

Observed Kp for 15 Dec: 2244 4433

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
17 Dec 20 Quiet to active.
18 Dec 8 Quiet to unsettled
19 Dec 5 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 11 was issued on 13 December and is
current for interval 16-17 December. Current activity is due to a
coronal hole. Activity has not reached the levels originally
forecast.

---
3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
16 Dec fair-normal poor-fair poor-fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
17 Dec fair-normal fair poor-fair
18 Dec normal normal fair
19 Dec normal normal normal

---
4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
16 Dec 14 blanketed by Sporadic E layer 00-02UT and 07-08UT,
15-20% depressed 03-06UT, 30% enhanced 16-18UT and
otherwise near predicted monthly values.

Predicted Monthly T-index for December: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
17 Dec 5 Mostly near predicted monthly values, with occasional
depressions of 10-20%.
18 Dec 15 Near predicted monthly values
19 Dec 15 Near predicted monthly values
COMMENT: IPS HF Communications Warning 14 was issued on 13 December
and is current for interval 17 December. Sporadic E layer was
observed at times yesterday and is expected again at times today.
MUFs at Townsville and Hobart were depressed by 15-30% during the
local day. Propagation conditions appeared fair to normal at low lats
and poor to fair at mid and high lats. Fair conditions are expected
today.

AB> 97.101 (d) No amateur operator shall willfully or maliciously
AB> interfere with or cause interference to any radio communication
AB> or signal.

AB>That's it. Nowhere does it say you have to listen before transmitting.
AB>In order for interference to be illegal, it must be intentional.
AB>W1AW does not have to publish a schedule to gain the right to transmit,
AB>for the simple reason that they are not doing anything otherwise illegal.

Illegal, maybe not, but it certainly does violate the spirit of the rules,
if not the letter.

After all, the ARRL purports to be the representative amateur
association in the U.S. and states many times in its Operating Manual
to always listen before transmitting. It looks like the ARRL is saying
"do as I say, not as I do" in this case. Regrettable, especially since
a lot of newcomers get their first exposure to amateur radio practice
by listening to W1AW code practice and bulletins.

I tend to judge calls not by their length or flow on CW, but whether or
not they have a "radio" aspect to it, like KA1MHZ, KA1KHZ, KD1HZ, etc.

Source record: 254849

Why? What's wrong with a dual-band radio? That's the way I've always done it. I have recently added a CS-800 controller to the home unit (made by Connect Systems), a private phone-patch / repeater controller, full featured and multi-function controlled by touch tones. I am very happy with it, except that I have my doubts about running little Kenwood jap crap full-out for long periods like I do... I have already had to cut the output down to 'medium' power at one site (I run 3 sites right now, all up all the time, for an extended-range full-feature private phone patch repeater net). Also, you did not SAY you were going to use HT's... I assume you have more sense than that... they would not last long at all... they tend to overheat. Some even time out after 10 minutes and can't be changed from doing so (Kenwood TH-78). I wouldn't worry about de-sense because you are on different bands... 2m and 440 don't tend to desense each other much... I use the same antenna thru a diplexer (duplexer, whatever) at each site... a few kinks but it's still up and running!!! :-) Ed 73

HELP! I am planning a trip into the Boundary Waters Canoe Are of Minnesota, where I heard a ham once with an HT hit the closest repeater (50 miles or so). But we also wanted to go ANOTHER 50 miles or so into Canada's Quetico National Park. What can I carry for emergency comm? 2m seems too far to the 'peater... a CW rig seems do-able, with a lil' wire antenna over a tree... but power? We would be carrying everything, and lead batteries are too weight-expensive, I would think. Any help would be appreciated (and might save a life!). ;-) Ed
Please e-mail me direct if at all possible.... thanks!

>
Hi Jerry,

I think you will be able to improve your response rate to about 80% by enclosing a self addressed stamped envelope with your QSL. If you give the stations you have worked a way to get the card back to you your return rate will greatly improve. I say this assuming you are in the US and working other US stations.

If you are working DX and want a card back by mail you MUST enclose a self addressed envelope and either an IRC (International Reply Coupon available at your local post office) or $2.00 in one dollar bills. DX stations don't need another US QSL card. They get many requests and if they are rare they get nearly one QSL request for each contact they make. Postage can cost them a huge amount of money.

Another option is to QSL via the QSL buro if you are an ARRL member and working DX stations. The buro will take a minimum of six months for a return card and typically a year and in some cases up to 10 years or so. If you're in a hurry use snail mail.

Bill

SCOTT: Here are the timing relationships in Morse:

Element Duration in number of dits

DIT 1
DAH 3
Space between
elements 1
Space between
characters 3
Space between

words 7

You have probably figured it out but what this means is a DAH is three times as long as a DIT. Within a character, space between DITS and DAHS is same length as a DIT. For example, in the character K (DAH DI DAH), the space between the DAH and the DI is as long as the DIT and the space between the DI and the last DAH is the same length as a DIT. Etc., etc.
Joe, K4FPT

PS: NEVER NEVER NEVER TRY TO LEARN THE CODE THINKING OF DASHES AND DOTS. TALK IN DITS AND DAHS BECAUSE THAT'S THE WAY IT SOUNDS.
DAH DAH DI DI DIT DI DI DI DAH DAH

DOC: Congrats on being a no-code tech. I am an Extra Class, have been licensed since 1958. That's back when yuo had to learn the code to get a license, when the Novice license was good for one year, noh-renewable, and novices were limited to 75 watts, crystal controlled. (What's a crystal, Grandpa?)
Anyway, have fun. The best thing about ham radio as a hobby is that there is room for everyone, although a few old soreheads do not want to admit it. If CW contesting is your thing, knock yourself out. If you chase satellites, go for it. If you prefer packet and digital modes, have fun. Ignore those who make a big deal of no-code.
One day curiosity will take over and you'll learn the code. It happens to everybody.

DON: Sad to say, but there is not much you can do about it if this guy wants to fire up on top of you. What you are experiencing is exactly what has driven a lot of folks off 75 meter phone --- and it was such a great place many years ago. Anyway, common courtesy says that, before cranking up on a frequency, you ask if the freq is in use. That is, on CW, send a few QRL? One fone, just ask a couple of times -- Is this frequency in use? If someone comes back and says, yes it is, then excuse yourself and move off. That's common courtesy.
However, another fact of life is that no one owns a fequency. You and your friedns may have been meeting at the same time on that freq for thirty-seven years and that makes no difference. It ain't yours. And, the last sad fact is that a few jerks like to push the point. They will fire up on top of nets, roundtables, conversations in progress, etc, and exert their right to the frequency. Best rule is this: Ignore them. Don;t get into arguments with them, don't make smart aleck comments about them. Move frequency. If they follow you, move again. If it keeps up, tape record it. Document it and send yur documentation to the FCC. If the guy follows you around the band, that's malicious. Just transmitting on top of you is not. Keep Congress out of it -- we do not need to get Newt'ed. It is not a pretty picture but that's the price of admission in a free country. Just don't join them -- keep yourself clean.

WHERE TO GET A COPY OF THE MORSE CODE? It'll cost you $6.00 but the best
reference is a book from American Radio Relay League entitled MORSE CODE: THE
ESSENTIAL LANGUAGE. Get it from the ARRL, 225 Main St., Newington, CT 06111.

JANE: You can't be for real!! I mean a wife asking what radio she should get
her husband??? Just in case you happen to be serious, I have the Yaesu FT-470
and am quite pleased with it. Rugged, easy to use, buttons are big enough.
Lots of battery choices, good heatsink. The 470 has been replaced by the
FT-530. I do not know anything about the 530 but, if it's anything like the
470, it's a winner. The little shirtpocket rigs are cute but I would be
concerned about: rugged? battery life? can adult fingers punch the buttons?

# 4363. Re: how do you exchange QSL cards ?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-17 03:37:46 UTC
From: billsohl@earth.planet.net
Message-ID: <3ctmea$j3f@jupiter.planet.net>
Source record: 254861

gregory brown (gbrown@unlinfo.unl.edu) wrote:

: Hi Jerry,
: When I was first licensed in 1962, exchanging QSL cards was literally
: the "final courtesy of a QSO", and return rates were very high.
: Postcards also cost 4 cents to mail then. Domestic QSL return rates
: have apparently dropped dramatically (I make very few domestic
: contacts anymore, and when I do I now QSL only when I receive
: one...but 100% on those).

: Cost is a concern, especially in rarer states, but I think it is
: generally quite impolite not to reply to a QSL request even tho an
: SASE is not included. But if you really need confirmation from a rare
: state, an SASE will help.

All of the above is true, but I have a real problem when hams
don't even provide a QSL when I include an SASE (and I always
send an SASE because as a NJ ham I know neither my state nor
my VHF grid are rare or unusual.)

Frankly, even if someone doesn't want to respond to my request,
they could at least send a note back usuing my SASE to tell me
they don't care or choose to QSL. At least if they did send back
a note to that effect I wouldn't be inclined to send a follow-up
request on the prospect that my original request was lost in the mail.

: The more interesting a QSL card is, the better the reply rate. That
: doesn't mean expensive, tho. Write up a little bit about yourself,
: your interests and where you live and include a copy with your QSL.
: The idea is to make your's stand out...not just another postcard.

I agree with this also.

: There are those around who think QSLing is foolish/wrong/whatever, and
: you'll never get a card from them, but don't worry about it.

I've had several QSO's and asked about QSL'ing and I have no problem
if the ham tells me s/he doesn't QSL. But when I go through a VHF
band opening and exchange the pertinent callsign, grid, etc. and
then don't get a reply card despite using an SASE I have to ask what
or why is the other ham participating in that type of QSO?

: You just have to learn from your experience and decide what you want.
: Getting a lot of cards means making a lot of contacts, and putting out
: a lot for postage...understanding that you will not get back what you
: put into it.

Unfortunately, true.

: Personally, I think that every request should be answered. That's
: part of the game. If a person can't fulfill this simple courtesy, he
: shouldn't make the contact. (I'm sure I'll take some heat for that
: comment!)

Not from me. I couldn't agree more with what your philosophy is
as I subscribe to the exact same level of courtesy.

Whatta scam. No address on the form was an obvious oversite.
Send it to the FCC, Gettyburg, PA directly .

You have one other option, that is send it to me with a check for
only $4 and I'll mail it to Gettyburg for you. :)

# 4369. Re: how do you exchange QSL cards ?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-17 12:24:08 UTC
From: tigger@prairienet.org
Message-ID: <3cul98$22k@vixen.cso.uiuc.edu>
Source record: 254867

Hi, everyone-

As contester/DX'er, I make a lot of QSO's every year, probably around 5000 or so. Even though I'm in Illinois, I still receive a lot of requests for cards. 90 percent of these requests come with an SASE, and I get them out right away.

The other 10 percent WILL get a reply, but I'm in no hurry to process those. My personal situation is that I'm a recentcollege grad with a lot of bills to pay related to school, student loans, etc. 19 cents may not sound like a lot to you, but let's take a scenario to an extreme for a moment. I made 2000 QSO's in a contest earlier this year. If everybody sent me a card with no SASE, 2000 QSO's x 19 cents per card = about $105. I simply can't afford that. Not to mention the amount of time it takes to process that many cards. While this is an extreme scenario, I think you get the picture.

My bottom line: If I REALLY need somebody's card, I ALWAYS send an SASE. This shows the other op that I'm serious about wanting their card, and my return rates are much higher (not a hundred percent, but a lot better than with no SASE). If it's a DX qso, you ALWAYS send an SASE, or go through the buro. I fell it's unfair to ask a DX operater to pay for the postage out of his own pocket.

When I went to Jamacia this past may, I made 2500 QSO's, and got a lot of resquests direct. 95% had SASE's. They got their cards back quick. A few sent no SASE's and I processed them when I got aroud to it,and put a note on each one reflecting my honest opinion: "Tnx for QSO. SASE next time, okay?" I WAS grateful for each QSO I made, but I STILL can't afford to pay for each QSL.

Hope this helps.

# 4374. UK First! 2nd User Equipment Directory Online Now!

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-17 16:25:49 UTC
From: Mike@g4kfk.demon.co.uk
Message-ID: <787681549snz@g4kfk.demon.co.uk>
Source record: 254871

The CQ Centre BBS is pleased to announce a (we think) UK first!

We're bringing together 2nd user equipment listings from a number of UK Amateur Radio Equipment Retailers, to be made available in the following formats:

1/ Online Viewing - at The CQ Centre BBS (details below)

2/ Downloading - from file area 12 of The CQ Centre BBS

3/ Fidonet File Request (FREQing) with the following 'magic' file names:
HFRX for a list of HF Receivers
HFTX for a list of HF Transmitters and Transceivers
MOBILES for a list of VHF/UHF Mobile Transceivers
VHFBASE for a list of VHF/UHF Base Transceivers
HANDIES for a list of Transportable and Handheld Transceivers
SCANNERS for a list of Airband, Marine and Scanning Receivers
DATACOMS for a list of Packet Radio & RTTY Equipment
ACCESS for a list of Station Accessories

The IEMSI server for file requests is on 01753 595468

4/ Email request to mike@g4kfk.demon.co.uk - I'll normally respond within 24 hours, often a lot quicker during weekdays.

We've kicked off as of today with approximately 10 mobile VHF/UHF rigs, 38 handheld transceivers, 23 hf receivers, 13 hf transceivers and 30 scanning receivers.

Access to the list is (of course) free.

Happy bargain hunting!

73
Mike

Several responses to this question have commented about the Buro system, IRCs, and $2 for postage. These are valid comments in regard to DX contacts. But I since the original poster did not specify DX contacts, and said he was quite new ham radio, I must point out that in the States at least, you can _not_ use the ARRL Buro for domestic contacts.

There are some private enterprises that act as domestic QSL buros but I do not have that info handy. They generally charge a fee per card...less that postage, but of course slower.

Lots of interesting comments about prosign use...some quite contradictory. CW practices change over time just like language (and everything else!) does. The oldtimers will prefer the original meaning and use of prosigns. Traffic handlers will vary. And the newer hams who learn from what they hear will prefer something else. While Internet is a great and easy place to get questions answered by lots of folks, you may be even more confused when all is said and done. And there are a lot of very bad examples on the air to follow.

The underlying reason for prosign use is to communicate a fairly complex idea very briefly and clearly. In this regard, standardization is very important. So I would recommend that operators start with the ARRL definitions (as close to a standard as we have), and then fine-tune their understanding by asking long-experienced CW operators (He/she may not _necessarily_ be correct, of course, but there's a better chance!). The accepted definitions of prosigns have not changed in the 33 years since I have been licensed...and no, I'm not senile! Only 45!

Good luck!

For CW, I've always appreciated any DL1 call...very rythmic. And a another poster said, W1AW is the classic example of a snappy CW call.

I really don't like "cute" phonetics, but when my wife got her license last year, she saw the MYW suffix and immediately said,"Hmmm..._M_ind _Yo_ur _W_ife! Love it!"

Given the non-PC nature of some of Jeff's opinions, I can understand why
he doesn't give out his address. He'd end up with a 6 meg mail bomb
if he did.

Rest assured if Jeff wants to talk to you, he'll let you know his
address. My conversations with him in e-mail have always been pleasent.

# 4379. PC Interference

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-17 18:21:45 UTC
From: jeffery@uspto.gov
Message-ID: <3cva7p$5mk@pioneer.uspto.gov>
Source record: 254877

I have a Yaesu FT-990 located near my PC in my ham shack and am getting some interference from the PC in the radio. I discovered that the monitor is contributing some interference by turning off the monitor.

I've tried putting ferrite filters on the monitor, data, and power cables for the PC but to no avail. I even tried shielding the PC but that didn't help either!

Does anyone have any suggestions for me on this problem? I checked the ARRL Handbook and while there is an entire chapter on RFI, it is primarily focused on TVI and not PC-to-radio interference.

Any help an suggestions are greatly appreciated!!

73,

John Jeffery, KB4CG

Why have so many generations of hams not given a second thought to
standing by for a short period of time to allow our national amateur
organization provide us with timely information and code practice on
published frequencies, yet this generation `despises' this practice?
The W1AW bulletins are for the good of *all* amateurs, ARRL members or
not; in no way are they self-serving.

I have never seen reference to the ARRL stating `we own these freqs';
those frequencies are open to anyone 23 hours per day.

I wonder what these new hams do when a weekly net comes up on their
favorite repeater - jam it?

From: sarmstro@vaxc.stevens-tech.edu
Message-ID: <1994Dec17.161628.1@vaxc.stevens-tech.edu>
Source record: 254881

I have a question about airlines and Ham radios. I'm going to be flying to Florida and would like to know if there are any restrictions on carrying a Hand-held transmitter on the plane with me. I would mainly use it to listen to tower frequencies on the flight, not for any broadcasting. Also, will I be able to recieve anything through the plane due to the metal fuselage? Any answers can be sent via E-mail or can be posted here. Thank-you in advance.
BTW- I will be flying NorthWest Airlines, in case different airlines have different rules.

>
>>So the prosign AR is supposed to be a seperater; as used above it
>>seperates the text from your comments.

>That is not how AR is currently taught, or used.

Well, just like all languages, meanings change. All amateur prosigns
came from the maritime and commercial boys (except for a small block
of ARRL-invented Q-sigs). In times past AR meant `end of message'.

> Why? What's wrong with a dual-band radio? That's the way I've always done it. I

Well, I was hoping to avoid the ID problems of the 70cm. output from the mobile. How do you ID your dual-band's 70cm. output? I realize if you are accessing it with a dual band HT, you can switch to the 2 meter side and have it retransmit through the 70cm. side, but that could be a pain.

> have recently added a CS-800 controller to the home unit (made by Connect
> Systems), a private phone-patch / repeater controller, full featured and multi-
> function controlled by touch tones.

Would this unit allow me to interconnect a VHF and UHF radio together to cross band repeat? Will it key up and send an ID over each (at least one, the UHF) radio on it's own? Can I use DTMF to enable/disable xband repeat?

> Also, you did not SAY you were going
> to use HT's... I assume you have more sense than that...

No way. I'm thinking of using standard mobile radios and the UHF would only need to be at low power output. The VHF side would be used at whatever I need to communicate. The VHF would have a xmit/receive cycle about the same as if I were sitting at the radio using the mike.

I do admit it would be less hassle to use a dual band radio for this and I haven't completely ruled one out... yet. My main concern is over the IDing of the UHF side. I don't want to have to cross band VHF to UHF just to ID my mobile from my HT.

Thanks for the info.

From: richw@mks.com
Message-ID: <3cvql8$gki@ia.mks.com>
Source record: 254891

I've always wondered what would happen if a ham whose call ended in WOP tried to get call-sign license plates in a state whose motor vehicle department considered WOP an ethnic slur and refused to issue personalized plates with this combination.

On the one hand, a state has the right to screen license plate assignments and refuse (or even revoke) plates with offensive slogans. This was definitely done in California, where I used to live. In fact, I remember there was a big stink a few years ago in California over WOP, in which the DMV revoked (or at least attempted to revoke) large numbers of personalized plates with this combination -- some of which, BTW, were owned by drivers of Italian ancestry.

On the other hand, if a state vehicle code says that a ham has the right to get plates with his/her FCC-assigned call sign, it could be argued that the state motor vehicle department has no right to second-guess the FCC in such a matter.

I should have mentioned that I had only found the first article and simply assumed that the L1 referenced was the one in the second article (for the amp) as the first article didn't call for a Radio Shack 100 anything for L1. If it's an RF choke on the power supply line, then 100 mH is a reasonable value and Radio Shack did sell coils of that value at one time.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 17/2330Z DECEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 17 DECEMBER AND FORECAST FOR 18 DECEMBER - 20 DECEMBER
---
1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 92/37

GOES satellite data for 16 Dec
Daily Proton Fluence >1 MeV: no data
Daily Proton Fluence >10 MeV: 1.1E+04
Daily Electron Fluence >2 MeV: 3.7E+07 (normal)
X-ray background: B1.8
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
18 Dec 19 Dec 20 Dec
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 18 Dec: 92/37

---
2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: mostly quiet.

Estimated Indices : A K Observed A Index 16 Dec
Learmonth 7 3222 2121
Fredericksburg 7 14
Planetary 8 11

Observed Kp for 16 Dec: 3332 3211
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
18 Dec 8 Quiet
19 Dec 5 Quiet
20 Dec 5 Quiet
COMMENT: Geomagnetic activity forecast for the period 16-17 Dec
occurred 15-16 Dec, peaking on the 15th at a level less than that
originally forecast.
---
3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
17 Dec normal fair-normal fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
18 Dec normal normal fair
19 Dec normal normal normal
20 Dec normal normal normal

---
4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
17 Dec 4 near predicted monthly values

Predicted Monthly T-index for December: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
18 Dec 0 10-20% depressed during local daylight hours, then
near predicted monthly values.
19 Dec 15 Near predicted monthly values
20 Dec 15 Near predicted monthly values
COMMENT: Sporadic E layer was observed at times yesterday and is
expected again at times today. MUFs at Hobart were near predicted
monthly values - no data was available for Townsville. Propagation
conditions appeared fair to normal at mid lats and fair at high
lats. Fair to normal conditions are expected today.

gain is to be made. Please notify me prior to publishing.

In the following true narrative the ship's name and her callsign
have been changed.

Part 6: My First SOS at NMO

As mentioned in an earlier part I always sat the 12 hour 500 kc
night watch on my duty nights; I loved listening to the steady
flow of calls from ships in far off waters. Even though we sat
in the Central Pacific I would sometimes even copy a fluttery East
Coast US shore station. Throughout the night I would hear ghostly
signals, just above the noise level, that would fade in and out from
who knows where. We used a Beverage-type long wire that stretched over
one mile in length, and NMO sat in a very electrically quiet region.
We were able to copy any ship or shore station anywhere in the Pacific.

One evening, feeling a bit drowsy (0200 local!), I thought I was dreaming
when I heard a long dash, a pause, another long dash, a pause, another
long dash, a pause, .....
Like an electric shock, adrenalin flooded through me at
the speed of light - OH MY GOD - SOMEONE IS SENDING AN AUTO ALARM!
My eyes shot to the clock to time the dashes: 4 seconds on, 1 second
off, 4 seconds on, 1 second off - those 12 long dashes almost froze me.
I yelled into the intercom to the Chief `Auto Alarm on 500' knowing
at the same time alarm bells were ringing on board every ship scattered
around the Pacific within radio range of the distressed ship. Recall
that when a shipboard operator goes off watch, ITU rules dictate he leaves
a receiver tuned to 500 kc with a decoder attached - if that decoder hears
at least four 4-second dashes each with 1-second seperation, relays in
the decoder will clamp shut triggering alarm bells in the radio room,
in the radio officer's sleeping quarters, and up on the bridge, to warn of
a distress message about to be sent on 500 kc. (Now, the two-tone AA
used on the voice SSB MF distress/calling freq of 2182 kc was common:
Mexican fishing crews used them when they were drunk. But AA's on 500 kc
are *never* sent except when a ship is in distress.) This was the first
one I'd heard since my radioman school days; I can't put into words

the terror I felt while sitting out the ITU-required 2 minute wait (recall that the ITU dictates every step the distressed vessel's radio officer takes: Auto Alarm, then the 2-minute wait [if possible] for off-duty ops on other ships, woken by their Auto Alarm receivers, to race to their radio shacks to copy the distress). 500 kc was now in an extended silent period (see part 2 or 3 [or 4?]). Someone started tuning up and was immediately pounced on by myself: QRT SOS was all I needed to send - dead silence. One of the Australian shore stations was sending a CQ at the same time the AA went out - he must have heard the AA through his CQ for he stopped in mid broadcast. Nothing but an occasional static crash - dead silence. Throughout my brief 500kc career there had never been a silence like this I thought. Then it came:

SOS SOS SOS CQ DE DJNK DJNK DJNK SOS BT MV PANAMA TRADER HULL CRACKED IN HEAVY SEAS MAJOR FLOODING 42-27N 42-27N 178-51W 178-51W NOW ABANDONING SHIP SOS BT MASTER AR K

Then came the 10 second-long dash (ITU: for direction finding).

I was first - in A2 I sent:

SOS DJNK DJND DJNK DE NMO NMO NMO RRR SOS

and after me 500 kc was flooded with ships and shore stations sending sending the ITU response: RRR SOS:

SOS DJNK DJNK DJNK DE NMC NMC NMC RRR SOS (San Francisco)
SOS DJNK DJNK DJNK DE NOJ NOJ NOJ RRR SOS (Alaska)
SOS DJNK DJNK DJNK DE NMQ NMQ NMQ RRR SOS (Long Beach, CA)
SOS DJNK DJNK DJNK DE KPH KPH KPH RRR SOS (San Fran.)

<ITU dictates a strict format to follow in distresses - from now on every transmission must be proceeded with the SOS prosign>

along with KFS in California, NRV in Guam, a couple Japan shore stations; the radio operator aboard DJNK must have breathed a sigh of relief and taken some comfort knowing his message was heard by so many. At the same time our AMVER computer was generating a printout of the locations of ships transiting the North Pacific: No ships were in DJNK's area! At least no AMVER reporting ships; it's possible there was a ship close to her that wasn't sending us their AMVER position reports. A very slim possibility but a chance we couldn't ignore. I was ordered by our Rescue Center to send the DDD SOS, i.e. to relay DJNK's distress message from our 10 kW transmitter; in A2 first I sent the:

AUTO ALARM (12 four second dashes with a one second pauses)

then with my hand shaking, clenching the straight key:

DDD SOS SOS SOS DDD CQ DE NMO NMO NMO SOS BT <DJNK's message>
BT ANY SHIPS IN AREA DIVERT AND ASSIST SIGNED US COAST GUARD
AR DDD SOS

Dead silence reigned for minutes that seemed like hours. An awful, awful feeling of helplessness overcame me as I sat in that chair with the entire NMO crew standing in silence - all of us knowing at that very moment men were perishing in an icy ocean...

Already we had aircraft in the air heading to DJNK's position so I notified him:

SOS DJNK DJNK DE NMO NMO BT USCG AIRCRAFT LAUNCHED TO UR POSN ETA 3 HRS BT HOWS UR COND? K

SOS NMO DE DJNK HV TO LEAVE SHIP NOW TU OM FER <high pitched whine>

His transmitter had emitted a - a scream - it actually screamed! I turned to the Chief asking ``Is that...?'' ``Yes, the ocean water just flooded his radio room shorting out his transmitter and batteries.''

I couldn't accept this - the man at that key couldn't have just perished! I sent:

SOS DJNK DE NMO
<silence>
SOS DJNK DJNK DE NMO
<silence>

At this point the Chief put his hand on my shoulder and only said ``He can't answer you - he's gone.''

Throughout the night at 15 minute intervals I continued to send the Auto Alarm and the DDD SOS to no avail; no ships were in or steaming through that area of water. At daybreak our aircraft reported extremely heavy seas and only seeing debris: bales of hay, which was the cargo of DJNK; no lifeboats, no bodies, only debris.

Even to this day I sometimes hear, in my sleep, the scream DJNK's transmitter emitted that terrifying and horrible night. I pray the crew of that ship rest in peace.

End of Part 6.

# 4395. Jan95 VHF Contest Rover Schedule for KD6EFQ/R (+N7TTO)

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-18 00:31:02 UTC
From: keating@nosc.mil
Message-ID: <1994Dec18.003102.23539@nosc.mil>
Source record: 254893

For unlimited distribution and publication within southwestern USA:

News/Info Bulletin

A.R.S. KD6EFQ Date: Sat. 17 Dec
1994
PO Box 83221
San Diego CA 92138-3221

January ARRL VHF Contest, SW Division Rover Station Operation Plans
KD6EFQ/R (+N7TTO)

Jim Kauffman - N7TTO, & Roger Keating - KD6EFQ, are planning on taking their VHF rover station across most of Southern Arizona and back into Southern California for the January 95 ARRL VHF QSO Party. They intend to rove from east to west along the I-10 corridor to Blythe and then south along the Colorado River, and then west to San Diego DM12. The exact route may vary, but they'll attempt to put all the Southern AZ grids on for at least a short time on Saturday, January 21st.

If you've operated a rover station over many grids, you realize that a precise schedule isn't practical, yet without some sort of plan, many QSOs are accidents. We are publishing this tentative projected schedule with the following caveats: we can't control the wx, and we are doing this for fun, so if the wx is severe someplace along the way, we won't stay long. Operating activity will help determine how long we stay at a location, and how long we work any particular band. Usually, we'll make contact on 2m and then coordinate with stations to meet us on the other bands. If we can't make contact at a particular location, we'll move on quickly. We almost never get ahead of schedule. :)

We'll be trying a prototype model of a new antenna by Gene Swiech, WB9COY: a 3 elem. aluminum beam designed for portable 6m use. If 6m opens, we'll abandon our schedule and have fun with the DX! For prompt QSL response, please include SASE.

For more information, please contact Roger, KD6EFQ
via email at <keating@nosc.mil> or Jim, N7TTO, at <jkauffmn@netcom.com>.

US Mail: KD6EFQ, PO Box 83221, San Diego CA 92138-3221
telefax: (619) 553-3650 phone: (619) 553-3662

We hope to work your station several times that weekend.
As a rover, we get and give new QSO points every time we enter a different grid. Drop us email, packet, or mail a card with your station's set-up and location. We'd love to give you a new grid on a band you need.

73
Roger Keating - KD6EFQ & Jim Kauffman - N7TTO

- - - -
Here is a tentative schedule:

MST Saturday, Jan. 21st, all times are MST estimations.
10:00 DM51 NW corner somewhere. We want to put this grid on; no promises!
11:30 DM52 SW corner along I-10 near Wilcox, if we have time.
DM41 mobile along Westbound I-10 into Tucson from Benson/Wilcox area.
12:30 DM42 mobile along I-10 in Tucson. Quick lunch.
14:00 DM41 NW corner somewhere near Sells.
15:00 DM31 NE corner mobile, (Portable antennas up if we can get the permit.)
16:00 DM32 SE corner somewhere.
DM42 mobile headed north through Casa Grande.
19:00 DM43 mobile as we head into Phoenix along I-10.
20:30 DM33 mobile as we head west along I-10
(alternate route via Gila Bend along I-8)
We will likely stop for meal and rest somewhere in DM43/DM33.
23:00 DM23 Quartzsite/Blythe area. (possible alternative route is via Yuma.)

PST Sunday, Jan. 22nd. all times are PST estimations
08:00 DM23 Colorado River area, south of I-10.
10:00 DM22 Glamis area
11:00 DM23 South end of Salton Sea
14:00 DM13 Mountains of Riverside/San Diego Counties
17:00 DM13 North San Diego County.
18:30 DM12 Del Mar - La Jolla area along coast of San Diego.
20:00 QRT for cleanup and a hot meal!

Radio Operations:
50: 75W+ 50.130 - 50.145 USB, 52.540 FM
(prefer to avoid QRM at 50.125) either
v or h
52.540 FM (prefer to avoid QRM at 52.525)

>
>What am I missing?

The old days. :-)

Once upon a time, transmitters had knobs on them that had to be adjusted when you changed frequency. They were called "load" and "tune", and did what you now have to pay extra for in another box, they matched the finals of the rig to the load at a particular frequency, the circuits were narrowband. Now the loading also changed depending on power level, so you had to tune up at full power. If you did that directly into the antenna, you'd annoy people. So what you did instead was to tune the rig into a dummy load. This matched your output, at the power level you wished to run, to 50 ohms.

Now that's not a real big help if your antenna doesn't look like 50 ohms. So now you hooked a noise bridge between your antenna tuner and your receiver and adjusted the tuner so that it transformed your antenna impedance to look like 50 ohms to the rig. Now, not forgetting to remove the noise bridge, hook the transmitter to the tuner and operate, you're all tuned up and you never put a dead carrier on the air.

Did most people ever do this? No, but it looks good in theory. What most people did was hook their antenna directly to the rig and tune the rig to match whatever impedance the antenna presented to whatever the finals wanted to see at that frequency

and power level. No need to buy a separate box when the rig has
a tuner in it. There were plenty of dead carriers on the bands.

Now we have "no tune" radios, so tuning up into a dummy load
has become a moot point. But using a noise bridge to tune the
tuner, if you have one, is still the polite way to keep dead
carriers off the air.

# 4397. HAM radios

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-18 01:17:12 UTC
From: root@localhost.com
Message-ID: <3d02io$uni@msunews.cl.msu.edu>
Source record: 254896

Hmmm, could someone explain HAM radios to me? Like what all a HAM radio can do? costs etc? A few friends and I were thinking about getting some CBs so we could communicate within our city anywhere, (cars, house etc) but I've heard a little about HAM radio and want to know more. What would be the range of a handheld ham radio and cost?
thanx

# 4398. HAM radio on airplane/ answer

Newsgroup: rec.radio.amateur.misc

Speaking from experience (I'm a HAM and a pilot) you are not allowed to have receiving (or especially transmitting) devices in the passenger compartment of any airliner, that is to say any equipment that is switched on. This includes palm size TV's, AM and FM radios and in some cases lap-top computers!

I caution you, you may even have some trouble getting the hand-held radio through the security gate, I have had to almost completely dismantle my radio for the security people in order for them to let me on-board with it. My suggestion to you, leave it in your suit case and save the hassle, those security people can even take your radio away from you if you insist on getting on the plane when they decide you can't board with the radio! They have that authority, and as a flyer myself, I'm glad they do!

The reason they cite for not allowing these kinds of devices on board is that even though they are not transmitting, in the on position they emit tiny amounts of RF which could alter very sensitive navigational equipment on the aircraft. I assume that there is a tiny amount of truth to that but honestly believe that the "smuggling of an explosive device" plays a bigger role in that decision, you be the judge..

Good luck and happy landings!

If you want to listen to the drivel on cel-phones, I thought it was illegal to even suggest that RXers could be modified to get that part of the band. Ace Communications found out the HARD way!! My $0.02 worth says "Forget it" if you value your Amateur licence. Besides, if you want to listen to that kind of stuff, fire up an old CB. :)

Now, if you want to receive other stuff in that band but not the cell sub-band, just about any older scanner can get it. And disregard the previous paragraph as drivel in and of itself HI.

I would like to relate my experience as a Ham and frequent flier (>30k miles per year). First, all that is stated above is true, with the exception of lap top computers. Indeed, the only times I have not been allowed to operate my lap top was during taxi, takeoff, climbout, approach and landing. I have never been prohibited from using my laptop either at the gate prior to push back or during cruise. Of course, I am sometimes (about 1/3 them time) asked to demonstrate that my laptop is really a lap top when I clear security.

As far as getting my dual band H/T through security, I have NEVER, EVER been questioned about it, and I have gone through some of the most security con-scious aiprorts in the US and Europe (LAX, JFK, Rome, Frankfurt, to name a few). I always carry the H/T in my carry on baggage (with the antenna de-tached). I have even operated from the gate area while waiting to board with not so much as a second look! In fact, many of my other Ham friends travel with their H/Ts in their carry on luggage. I know of NO instance where they have ever been prohibited from boarding with it. I suspect the same is true of those carrying cell phones.

>
>The reason they cite for not allowing these kinds of devices on board is

>plays a bigger role in that decision, you be the judge..

The party line given by the airlines is that the RF being emitted may interfere with the navigation of the aircraft. This is based on some anecdotal evidence from flight crews (I know of no definitive studies in this area...if someone does I would liketo here about them). As for "smuggling an explosive device," I don't think so. Like I said, I have passed through Rome and Frankfurt with my H/T with absolutely NO TROUBLE at all!! The airport at Frankfurt is probably the most secure airport in Europe!

So, my advice is to my fellow hams is to take your H/T, your lap top, etc. when you travel and just respect the airlines rules concerning operation of any RF emitting equipment. And, if you're travelling abroad, don't forget your reciprocal operating authorization (it does no good to take your radio if you can't operate it legally). And, if airport security tries to prohibit you from carrying your radio, especially if you've got the proper paperwork, question them...I know that I will (but this is not likely to happen, unless you happen to be in some exceedingly backward place, probably in the US, where the security force thinks they're deified!

Regards,
Neil

I'd much prefer to sell these locally, to avoid hassles & delays from
mailing the items. Local means Boston area.

For Sale:

1) Icom IC-2SRA handheld transceiver $400
- receives 25-950 MHz
- includes cellular range (unmodded)
- transmits 2 meter band (140-150 MHz)
- transmit strength .5, 1.5, 3.5, 5 W
- AM/FM/WFM bands
- 63 memory locations
- 9 hour continuous use (scan mode) battery
- includes manual, schematics
- AC adapter (standard type) not included

2) Radio Shack Pro-37 handheld scanner $150
- receives 30-54, 108-174, 380-512, 806-823, 851-960 MHz
- includes cellular range (modded)
- 200 memory locations
- takes 6 AA batteries, built-in recharger
- includes manual
- AC adapter (standard type) not included

E-mail me with a phone number if you're interested in either one.

-tdk

Part 1/1, total size 37513 bytes:

------------------------------ Cut here ------------------------------
"Boatanchors" FAQ
FAQ Maintainer: John Brewer
brewer@anarky.enet.dec.com
----------------------------------

Index: * Why boatanchors?
* What is a "Boatanchor"?
* Where can I find one?
* What type of boatanchor should I get?
* Boatanchor Safety
* Boatanchor restoration.
* Where to get parts? ("are tubes hard to find")
* Where can I find more information?
* Where and how do hams operate boatanchor transmitters?
* Typical boatanchors and prices.

Why boatanchors?
---------------

Some may question the desire for 80 pound receivers and
100 pound transmitters, both with filaments sitting there
getting hot and wasting power in this day of microprocessor
based, mega-memoried miniaturized transceivers! Although
modern radios are extremely good at what they are designed
to do, they are about as interesting to operate as a
toaster oven. They have no soul.

Additionally, many find a zen-like feeling in taking an
old, misused ratty old radio and carefully restoring it
back to health. Like cars of the era, boatanchor radios
were made to be worked on, modified, and tinkered with.
Many think of it as Real Radio in this era where fixing
a transceiver is accomplished by boxing it up to send to
the manufacturer for a custom VLSI chip replacement.
Indeed, a warm soldering iron is almost a requirement
for operating a vintage station.

Others claim that boatanchors SOUND better than their
silicon descendents, and this is generlly true. The
audio from a Hammarlund or National receiver, or a

Johnson transmitter can sound much better than the
300mW audio coming out of the 2" speaker in the
typical transceiver.

Watching the flicker of 807 modulators in a Viking I
as you speak into a D104 mic, is certainly more stirring
on a winter night than considering hole and electron
flow.

If truth be known, much, if not all of the above although
true, are merely justification for the insatible hunt
for more and more of these old boxes, simply because they
are just too NEAT to have and operate!

What is a boatanchor radio?
---

Although there are different interpretations of this
term, generally any radio that is "hollow state" or
tube-type is considered a boatanchor. Units produced
from WWII until the mid 60's are probably the most
popular examples of the genre. The origin of the
term "boatanchor" becomes self-evident after carrying
a DX100 (a classic anchor) to your car and noticing
how much longer your arms have become.

Boatanchors may be transmitters or receivers... and
no 'anchor station is complete without an assortment
of like-aged station accessories like microphones,
Transmit/Receive relays, vintage SWR bridges and
so on. All of these items are valid subject matter
for the boatanchor mailing list.

Where can I find a boatanchor radio?
---

The best way to find a boatanchor is to let other hams in
your area know you are interested in them. Often times
I have been given a boatanchor, because the former owner
has relegated it to the garage or basement. This is also
the cheapest method. When attending a hamfest, ask some
of the sellers if they have any for sale. Often times
sellers won't bring such stuff, as it is HEAVY and is
perceived as not being sellable. Look under the tables,
and in the back of the sellers displays for them! While
you are under the tables rummage thru the boxes of parts
found under there for parts that will come in handy restoring
your new-old treasure. Tubes, high voltage caps, vintage
microphones and connectors may be found lurking here!

If you are in a hurry (and have money) ads in Electric
Radio magazine (see bibliography), the Ham Trader Yellow Sheets,
or your local packet BBS are good places to look. Expect to

pay more through these outlets. Also expect to become an expert in UPS shipping rules. Boatanchors are heavy, and often the cost of shipping one can exceed the cost of the entire unit.

What type of Boatanchor should I get?
---

This is a question that has as many answers as there are individuals. Generally, as a "starter" boatanchor, 50's vintage gear is probably the best way to go. Radios in this era are quite desirable, but often times won't require extensive surgery to get repaired and on the air.
A radio from a well-known manufacturer is also a good choice... for receivers, look for Collins, Hammarlund, Hallicrafters, and National are all good radios. In the transmitter space, Collins, E.F. Johnson, and Heathkit (with certain reservations) will do well.

Transmitters with plate modulated AM are the more desirable units. Prices will generally reflect this.

Good "starter" transmitters include, but are not limited to:

Johnson: Ranger I or II/Viking I or II/ Valiant/500
Collins: Any 32V series.
Heath: Apache, DX100A or B
(my AM bias is showing!)

"starter" receivers include:

National 183/183D, HRO60 and MANY others
Hallicrafters: Many SX series.
Hammarlund: HQ129, HQ150/160/170/180, Super Pro series, many others.
Collins: any 75A series.

By "starter" radio, I do not mean to indicate the cheapest! Most of these radios would also be on the "best" list. I selected these as they _are_ some of the best, and when one is starting anything, it is good to get the BEST stuff available, rather than getting junk and getting discouraged with it. There will be enough to learn (or remember!) without having to compensate for marginal equipment (was that 'Peak the plate and dip the grid, or the other way around??')! Any radio from this list will do the job for some time, and make operating a pleasure.

Boatanchor Safety
---

This is a genuine concern! Boatanchor have Real Voltage present in them! Lethal voltages. You will find that capacitors really DO store charge! None of this wimpy 12 volt stuff!

Get back in the habit of discharging any capacitors that
are lurking under the hood. Keep one hand in your pocket
when working on a hot radio. Be REAL careful and THINK THINK
THINK before twiddling with a boatanchor that must be
powered up and worked on.

It is SO easy to get used to working on solid state equipment
and not worrying about Real Voltages... don't do this!

Also, many older radios are not fused... receivers are good
examples of these. I generally replace the line cord
(they usually need it anyway) and either put an in-line
fuseholder, or some of the Heath-type fused plugs in the
radio. Better still, replace the 2-wire plugs with a more
modern 3 wire plug. Barring that, ensure that you strap
every cabinet with healthy sized cable, to a common
station ground. This will prevent _you_ from becoming the
cable between two pieces of gear at different cabinet potentials.

Fires are nice to have burning on winter evenings
but not when they are on top of your operating desk.

Speaking of operating desks, you will become good at carpentry
if you spend much time as a boatanchor operator. You will
quickly discover that the table you used to operate your
tranceiver is way too small, and waaayyyy too wimpy to support
a growing boatanchor station!

Boatanchor Restoration
----------------------

This subject could easily fill many pages. Below are just some
common topics. The Mailing List is a good place to ask
about other issues. Remember the radio that stares at you from
your bench is old. There are not many around. Take that into
consideration as you proceed through the process. If you
erase the dial marking on your receiver by cleaning it
with Windex, you likely will not find another at Radio Shack.
Take your time and enjoy. The journey to a working boatanchor,
like life, is the _point_ not a process. You will say less
nasty words if you take your time.

[does someone have Jim lockwoods memo about bathing radios?]
[ I'll add my $.02 about NOT bathing radios! ]

Some general restoration tips:

* Power up old radios gently. Plugging it into the wall and
turning it on is not gentle! Bringing it up slowly to operating
voltage with a Variac so that electrolytics can "form"
is gentle.

* Check fuses before powerup. Many 'anchors will have the
wrong value fuse in it. Checking the fuse before purchase

is a good thing to do too. If it's open, you at least know
what you are getting into.

* Don't trust that the tubes that are in the sockets are the
correct tubes. Check them against the schematic. If you
don't have a manual (and even if you do) note which socket
the tube came from so that you can replace them correctly.

* Don't clean tubes with water. The marking on the glass
will likely come off with one good swipe of a water dampened
cloth.

* Assume many electrolytic and paper caps are bad. Check them.

* Check high resistance, and high wattage resistors for
correct value.

* Nifty tools to have are flux brushes, for cleaning nooks
and crannys. Windex is nice for cleaning chassis.
Qtips are good to have too.

* NEVER clean dial markers or drums. If you do, assume that
they will wipe away never to be seen again. You WILL say
bad words if this happens!

* WD40 or Scotts Liquid Gold (my favorite) applied to a clean
wrinkle finish will do a great job of restoring the lustre.
Works well for knobs too!

* Never use WD40 or Scotts Liquid Gold on anything until you
have tried it on a non-visable part of the cabinet to make
sure it won't dissolve anything.

[------ help me out here... need more 1 liners and general tips-------]

Where do I get parts? (or "aren't tubes hard to find?")
---

You _will_ need parts to keep or get a boatanchor on the
air. Remember that even 50's vintage radios are 40 years
old.

Fortunately, hams are notorious packrats and parts suprisingly
abound, for old gear, particularly at hamfests (and in the
boxes under the table as mentioned earlier). Word of mouth
once again will work wonders at getting tubes, high voltage
caps, and the like shoved in your direction. Beware that this
is an addiction, and boatanchor radios, parts, and periodicals
will soon overrun all available space. Trust me.

If you are in a hurry, or need to get a radio working
before your hoard of tubes and parts gets established
the list below, taken originally from the ARRL server
may be of help.

#
# This ARRL Technical Information Service handout has been derived
# >from the June 1992 QST "Lab Notes" column. Information has been
# added to keep it current. You should also periodically check the
# ham-classified section of ham and electronic publications.
#
# How To Locate Manuals and Documentation
#
# "Excellent rig. Needs a little work." How many times have you
# passed up a good deal because you were certain you'd never find
# the service information? How often have you sent your rig to the
# factory for a bug that you could have fixed if you had the
# documentation? Mike Gruber, WA1SVF, one of our ARRL Laboratory
# Engineers, has searched high and low to find sources for service
# manuals and other useful information. In this month's column he
# gives you his results.--WB8IMY
#
# Q: Why do I need documentation for my radio equipment?
#
# A: Unless you're an electronics genius, proper documentation is
# often essential to the repair or restoration of any radio
# equipment. Even a simple schematic can save hours of time that
# would be wasted otherwise.
#
# Q: Okay, but is documentation readily available--even for my
# antique receiver?
#
# A: Believe it or not, there is a good chance that documentation
# still exists for almost any radio you're likely to encounter. Your
# success in finding it, however, depends on knowing what type of
# documentation might be available for your particular piece of
# equipment.

```
#
# Q: What types of documentation should I be looking for? Where can
# I find them?
#
# A: Let's save the names and addresses for later and begin by
# taking a look at the different types of equipment documentation
# available. There are several:
#
# Owner's Manuals: An owner's manual is supplied with the unit at
# the time of purchase. It's intended primarily as an instruction
# manual for the owner. It may not contain a schematic and service
# data is usually minimal. Although it's better than nothing, an
# owner's manual leaves quite a bit to be desired should a repair or
# alignment be required.
#
# Manufacturer's Service Manuals: Service manuals are usually sold
# by the manufacturer. They contain vital repair, service and
# alignment data. Most manufacturers supply service manuals for
# their products, although some may not provide manuals for obsolete
# equipment. If you're working with old equipment, it's possible
# that the manufacturer may have gone out of business. Keep this in
# mind the next time you purchase a new rig. Obtaining a service
# manual will take a little extra effort, but you'll be making a
# worthwhile investment in the future of your equipment.
#
# Third-Party Service Documentation: This type of documentation is
# is published by companies other than the manufacturer. It's
# available in several varieties from basic schematics to complete
# service manuals. While modern Amateur Radio gear is usually
# excluded, third-party documentation offers a wealth of information
# on antique receivers and modern consumer electronics.
#
# Q: Wait a minute. You mean that there are companies that publish
# and sell service data for another company's products?
#
# A: Certainly! Some of the most noteworthy publishers--past and
# present--include:
#
# Howard W. Sams & Company Photofacts: Sams started publishing
# Photofacts in 1946 with only 12 employees. Today Photofacts are
# accepted as the standard for accuracy. Complete chassis
# photographs are included and each component is clearly labeled.
#
# Alignment procedures and normal voltage readings are always
# provided. The extensive Photofacts library does not include modern
# amateur equipment, but you'll find service data for some of the
# classic shortwave receivers made by companies such as Hammarlund
# and Hallicrafters.
#
# Photofacts are sold in numbered folders and volumes. To obtain the
```

# correct Photofact, you must find the reference number for your
# particular piece of equipment in the Photofact Index.
#
# There is an interesting sidenote to the Photofacts story. Sams
# creates Photofacts from actual product samples. Instead of using
# the manufacturer's schematics, the circuits are analyzed and
# traced by Sams technicians!
#
# John F. Rider Perpetual Troubleshooters Manuals: "Rider's," as
# this series is commonly known, was first published in 1930 and
# covered radios back to 1926. The first numbered volume, however,
# appeared in 1933. New volumes were published at a rate of about
# one per year until the last one, volume 23, appeared in 1953.
# (Rider's for TVs, however, went from 1948 to 1957, volumes 1
# through 18.)
#
# Rider's is indexed by a system that is very similar to the
# Photofacts. Several index volumes were published, such as volumes
# 1 to 7, 1 to 10, 1 to 15, 16 to 22 and 23 only. Unlike Photofacts,
# however, Rider used service data provided by the manufacturers.
#
# RCA Victor Service Data Books, commonly called "Redbooks." These
# cover RCA receivers manufactured from 1923 to 1950. The first
# volume covered receivers from 1923 to 1928. A new volume was
# published each year until 1950.
#
# Supreme Manuals: Compiled by M. N. Beitman, these first appeared
# about 1930 and covered radios made as early as 1926. One volume
# per year was published until the company went out of business in
# the 1950s. These generally contain only schematics; Riders and
# Photofacts are far more complete.
#
# Hugo Gernsback's Official Radio Service Manuals: Six volumes were
# published from 1929 to 1936.
#
# Mallory Radio Service Encyclopedia: First published in the early
# '30s, the Mallory Encyclopedias contained a very complete listing
# of radios by manufacturer and model number. In addition, an exact
# tube complement was given for each product. This information can
# be very useful if you are seeking service data for an old radio
# with an unknown model number.
#
# Q: Speaking of tubes, what about vacuum tube data? Is that kind of
# information still available?
#
# A: It sure is! Data for Eimac tubes, frequently found in amateur
# amplifiers and other high-power RF applications, is currently
# available from the manufacturer. Transmitting tube data can also
# be found in the ARRL Handbook; look for it in Chapter 35 if you
# have a recent edition. Data books for other tube types, such as

```
# receiving tubes, have been published by several companies. Most of
# these data books are no longer in print. Copies, reprints and even
# old originals can still be obtained if you know where to look. Two
# of the most popular data books for tubes are:
#
# RCA Tube Manuals: These are probably the most common tube manuals
# -- especially for receiving tubes. Separate manuals were also
# published for transmitting, special purpose and industrial tubes.
# These manuals first appeared in the 1930s and were frequently
# updated.
#
# General Electric Essential Characteristics Tube
# Data Books: These are similar to the RCA Manuals.
#
# Tube substitution guides have also been published by Sams and John
# F. Rider.
#
# Q: Now that I know what I'm looking for, where can I find the
# documentation?
#
# A: If you prefer the manufacturer's service manual, start by
# contacting the manufacturer directly. If the manufacturer is out
# of business, or no longer supplies the manual you need, you have
# other options. For example, try obtaining a copy from a manual-
# supply company.
#
# If you're working with military gear, manual-supply companies are
# also good sources. And, some military equipment manuals can still
# be obtained from the government. (More about that later.)
#
# If you think a Photofact or Rider might be available based on the
# age and type of equipment involved, check with your local library.
# Many city and university libraries have them and will let you make
# photocopies provided that no copyright laws are violated.
#
# If your local library can't help you, try one of the "schematic
# services" that cater to antique radio buffs. Their prices are
# generally quite reasonable. Don't forget to check the hamfest flea
# markets and yard sales. Service information can turn up in the
# most unusual places!
#
# For a difficult case, you might try a classified ad in QST. A
# classified ad in a publication that specializes in the type of
# equipment involved (such as Electric Radio Magazine\1/ or Antique
# Radio Classified\2/ for surplus or antique rigs) may be very
# effective.
#
# ADDRESSES
#
# Q: Come to think of it, I have several radios that could be put to
```

```
# good use--if they were working! How about those addresses you
# promised?
#
# A: Here they are. Good luck with your projects!
#
# Alinco Electronics, Inc
# 438 Amapola Ave
# Suite 130
# Torrance, CA 90501
# tel 310-618-8616
# Supplies Alinco manuals only.
#

# Amateur Wholesale Electronics
# PO Box 224
# 1040 Industrial Dr
# Watkinsville, GA 30677
# tel 404-769-8706 (technical service and orders)
# Manuals and replacement parts for Azden Radios.
#
# ---
#
# Antique Audio
# 41560 Schoolcraft
# Plymouth, MI 48170
#
# Older factory manuals for RCA, Zenith (including Transoceanics)
# and several others. Riders volumes 1 through 22, Sams Photofacts 1
# through 600, Beitman's volumes 1 through 10 and Sams Transistor
# Service Manuals volumes 1 through 90. The price is $5 per
# schematic up to 8 pages. Fifty cents for each additional page.
# Written inquiries for schematics preferred.
#
# ---
# Antique Electronic Supply
# 6221 South Maple Ave
# Tempe, AZ 85283
# tel 602-820-5411
#
# Antique Electronic Supply supplies pre-1960 service manuals for
# many electronic products, including communications receivers. The
# cost is $4.50 each. A catalog of antique radio parts and books is
# also available. They offer reprints of some older service manuals,
# tube manuals, a tube substitution guidebook and even a ballast
# tube manual. [LOTS of tubes!! /john]
#
# ---
# Ardco Electronics
# PO Box 95
```

# Berwyn, IL 60402
#
# Manuals for 95% of the Hallicrafters product line. The company was
# founded by Anthony Dambrauskas, the Hallicrafters service manager,
# when Hallicrafters went out of business in 1978. Today, the
# business is being carried on by his son Robert. Manuals range in
# price from $7 to $20.
#
# ---
# Brock Publications
# PO Box 5004
# Oceanside, CA 92052
#
# Manuals for for all amateur equipment sold by Swan Electronics.
# Also stocks manuals for Cubic Communications, Astro and Siltronix
# products. Brock Publications is a home business owned by Grace
# Brock who retired from Swan Electronics/ Cubic Communications in
# 1990.

* Where can I find more information?
---

Well, a good place to start is the boatanchors mailing list!
There are quite a few people with quite a few radios here,
and questions are always welcome. Ask away!

Alternate sounces of information:

* Electric Radio magazine.
Highly recommended! _The_ periodical for boatanchor operations.
Whether you are a ham or SWL, or restorer, there is something
in here for you. The classifieds alone are worth the price
of admission. Very professionally produced. Monthly.

Electric Radio Magazine
POB 57
Hesperus, CO.

* Antique Wireless Association.
Although a mixture of general old radio lore, and
communications gear, there is enough good stuff in here
to justify the price of $10 a year. Very nicely produced
and published! Quarterly.

[Address]

* AM Press Exchange

The "original" AM and boatanchor publication. Has been
rather slim in content of late, but interesting to get
if you already get E. Radio. Irregularly.

Don Chester-K4KYV
[address/cost?]

Where Do Hams Operate Boatanchors?
---

On CW you are likely to hear boatanchors lurking anywhere. There are probably more CW boatanchors in operation than anything else.

On AM the following frequencies frequently have AM activity, band conditions and seasonal variations withstanding:

3870-3890 Khz
7290-7300 Khz
14.286 Mhz
21.4-21.45 Mhz
29.0-29.2 Mhz

What are Typical Boatanchors and Prices?
---

This is a difficult one, as prices can vary from free to many hundreds of dollars. What follows is a list of popular radios and prices one would expect to see in the Electric Radio classifieds.

Transmitters: Collins 32V Series $175-$400
(32V1,2 and 3)

EF Johnson Ranger $90-$175
Viking I $75-$150
Viking II $60-$150
Valiant I,II $150-$300
Viking 500 $400-$700

Heath DX100 $40-$150 *
Apache $50-$150 *

* - Kits. Price should vary widely depending on how it was assembled.

Receivers: Collins 75A Series $125-$600
(75A1, 2,3 and 4)

National HRO60 $175-$350
National NC183D $100-$175

Hallicrafters
[someone help me here with a few models/prices?]

Hammarlund HQ129 $60-$150
HQ150 $75-$150
HQ160 $90-$175
HQ170 $100-$175
HQ180 $150-$250

Epilog
---

Dont look as boatanchors as an investment. Get a real grimy specimen and clean and fix, and coax it back to life. Turn in on with the rest of the room lights turned off. As it warms up look into the insides and see the orange glow from the filaments and the purple fire from the 866's. Watch the giant S-meter come to life, and the dials emit that soft light, framed by your carefully cleaned and waxed cabinet. Rotate the knobs that are of sufficient size and layout to permit easy, flywheel smooth adjustment.

Maybe tune to the BBC on your NC183.... watch the S-meter climb as the full audio comes out from the 6 watt output stage as you crank back the RF gain. Fiddle with a few more knobs (boatanchor operation does not need to ba a passive experience) to get it set just the way you want it.

Then you'll know why boatanchors are such pleasent things to own. Like mine, your transceiver may become a very expensive frequency counter and RF generator used to align the 'Real Radios'.

Except during take off and landing (they make a general announcement
these days about electronic gadgets) you can "listen" all you want to
what ever you want. Transmitting at any time on a comercial airliner is
strictly forbidden. As a matter of common courtesy use an ear pice to
listen with so as not to disturb others around you.

Have a nice flight.

The Buckmaster CDROM works fine on a Mac- it comes with Mac specific access programs as well. The Mac portion is maintained by Keith Sproul (akasbb1@peabody.sct.ucarb.com), and is kept up to date. Keith has also ported APRS to the Mac.

Hi Scott:

There is no problem with taking the HT, but the rules are you cannot use
it - RECEIVE or TRANSMIT during the flight. Since most planes now
depend on very sensitive electronic gear, the noise generated even from
your receiver operating can be a danger (not much of one, but not a
risk worth taking with the entire plane according to the rulemakers).

I have spoken to pilots about this. Carry the HT without checking it -
fine. Just don't ever turn it on, even to receive.

Yes, they do make a 'general' statement about 'radio devices'.
United states 'at no time during flight, may any radio reciever
and or transmitter, including cellular phones be used'. If you
have any questions about the reciever/scanner, I would suggest
you speak to the captain and or flight engineer before the
flight. If the answer is no, leave it at no. My feeling is that
it will be no, but one never knows. I think the reason they
like to know, is that id thier intruments in the cockpit start
acting strange, they know to come see you first, before they
think they may have a problem. And, as and aside, if you will
be flying United (on certain equipment, like the 727), the captain
usually puts cocpit comms on the armrest audio outlet on channel nine.

I have listened to the comms on long flights, and there
isn't much happeneing when your at 35-39,000 feet. Most of the
activity is during taxi, take-off and landing.

Just ask, I think I would rather ask someone from the
flight deck, rather than an attendant....The attendants
probably have orders to give an automatic no.

Good luck,
Steve/N1TEC

I plan to put on a 6mtr packet system....1200baud AFSk on 52.7 Mhz (the old
RTTY calling channel)....my 6mtr proposed bandplan has room for packet and even
duplex pairs...(I propose a 1.6Mhz split for VOICE and 1Mhz for packet)

If you care to see it, I would be happy to post it...

You can expect 30-50miles for 100ft and 100watts...with noise blankers!

> SARMSTRO@VAXC.STEVENS-TECH.EDU

Scott, even though different airlines can have their own rules, FAA regulations state that you can use a radio for RECEIVING ONLY, and you cannot use it during taxi, takeoff, ascent, initial approach, and landing. Also, from my experience, the fuselage didn't affect my reception, however, I was in a window seat with the antenna point out the window. A file I've read on this says that for the best reception, you should point the antenna towards the center of the window, so that it's farther away from metal on all sides.

So, if you're planning on taking a transmit-capable radio aboard an airplane, my suggestion is to turn on the Xmit lock.

That's odd, because I've brought my radio (different shapes, models, and
sizes) through security areas in about 5 different airports, and every
time the only thing I had to do was turn it on. Also, like I said about
the different airlines, different rules, was while I was on a Delta
flight (and they claim to quote it from FAA regs), VHF/UHF receivers are
permitted during the phases I stated, but HF radios and transmitters were
not permitted. As a military flight-crew person, I have wondered about
this myself, and after taking into account all the IF modulation and the
close quarters of the aircraft, it didn't seem to interfere with any COM,
NAV, or telemetry systems aboard the aircraft. Also, when I've used my
receiver before, I never noticed any differences in the flight (plane
going off course due to a GPS error caused by the radio) or anything. =)

A small thing I forgot to add, and this is why I'm curious about the different answers I've been reading...when I was on a flight (about 4 months ago), I had one of the BIG H/T's with me (Kenwood TH-315A), and I was talking with the Captain of the plane, and he only asked me what the radio was, and that was it...he never made any comments other than that. So, either he didn't care, or wasn't worried about it. =)

I love seeing this stuff.

Anyone remember anything about NSS? I used to use them for code practice because they'd send news stuff (I think it was straight off the AP and/or UPI wires) and I could easily check my copy. They used to send at some ungodly fast rate (25 or 30, I would guess), and I forced myself to sit and try to copy it, day after day. First it was a letter at a time, then I could do occasional two-letter groups, then threes, eventually whole words and (over many months) all the way up to solid copy.

It used to be fun with dad, the newshound. I'd run into the kitchen and announce what I'd just read in a news story, dad would say it couldn't possibly have happened because he'd have heard it on the evening news, then next day he'd read it in the paper and wonder how the hell I knew all those details. :-)

## 4435. SSB on 30m band

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-18 20:30:21 UTC
From: w8ijdave@aol.com
Message-ID: <3d264t$p6k@newsbf01.news.aol.com>
Source record: 254787

Yesterday I was listening to the 30m band when I heard some SSB signals.
I decided to tune them in to see what they were and I was surprised to
hear QSOs between stateside hams. The last time I checked, 30m was cw
only. Has this changed? Does my Kenwood RS-1000 have an image problem?
Has anyone else heard stateside SSB QSOs on 30 meters?

SB DX @ ALLBBS $OPDX.187
Ohio/Penn DX Bulletin No. 187

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 187
BID: $OPDX.187
December 19, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K4CEF & Southeastern Cluster Group, AB4JI, WA3YVN, W4RA, KK6EK, 4X6UO, 3A2LZ, DF3RD, Japan DX News, SM3CVM, SM0CNS/DU7 and SP5EWY for the following DX information.

160 METERS (HOT HOT HOT). This band has been pleasing many. Stations from stateside have been working new ones between 0300 and 0730z. Give a listen.

A7, QATAR. Tom, DL9FCQ, will be active January 14-27th. No callsign was mentioned, but he plans to concentrate on CW (during his evening) on 40-10 meters. QSL to CBA.

BY, CHINA. Tom, SM0CNS/DU7 (editor of DX & IOTA Tidbits), reports that Dieter, DJ7BU, operates BY1PK on 160 meters and will do so until the end of the year. There have been no QSNs reported on the Ohio/Penn Network as of yet.

DU, CEBU ISLAND (IOTA OC-129), PHILIPPINES. Tom is active as SM0CNS/DU7 on all bands (80-10 meters) mainly CW, but can do SSB or RTTY on request. He will also be active on 160 meters very soon. Tom will be on Cebu until the end of 1995. QSL via Manila bureau or direct: Thomas Bevenheim, Ronda, CEBU 6034, Philippines.

FT5X, KERGUELEN ISLAND. Pierre, FT5XJ (F5NLL), was to leave the island on December 15th, but was heard on the 18th (DX net) 14226 kHz at 1415z. If Pierre departs later than announced, he will return to the island to be active between January and March of 1995.

H44, SOLOMON ISLANDS. Norbert/DJ9RB and Bernhard/DL2GAC will be active from here the second half of January 1995. Activity will be on CW, SSB, Pactor and with emphasize on low bands. QSL via their home calls.

KP5, DESECHEO. AB4JI who planned a trip to KP5 last year, and after receiving approval, it was rescinded because of several guerilla bands on the island, and the authorities could not be held responsible for

anyone's safety. Ray has recently inquired again on this matter, and the current position is that no amateur radio is allowed from KP5 at the moment. The authorities would not say one way or the other if there are presently people on the island, just a flat denial of operation from there.

QSL ROUTE. Daniel, 3A2LZ, reports the correct QSL route for his operations as 3A2LZ/0S0D and IK/3A2LZ/1P0D from Seborga is: Daniel Plett, B.P 349, MC98007 Monaco. He has the /0S0D QSLs ready but he is waiting for the /1P0D QSLs to come from the printer.

SPECIAL EVENT STATION. Members of the Jemtlands Amateur Radio Club (SK3JR), will be promoting Sweden as a possible candidate to hold the Olympic Winter Games in the year of 2002. Their special callsign will be 7S3OWG (Olympic Winter Games) and will be active from January 1st until June 16th. The station will mainly be active on CW but there will be some activity on the other modes and some participation in major contests. QSL via SM3CVM.

T32, EASTERN KIRIBATI. There has been a change of plans. Only three operators of the original five will be active from Christmas Island, December 27th through January 2nd. Begin looking for the following after the Christmas Holiday: T32J(JR5JAQ), T32A(JA5EXW), T32X(JA4GXS). Their suggested frequencies are: CW - 1806-1910, 3506, 7006, 10106, 14006, 18074, 21006, 24896, 28006 and 50110 kHz / SSB - 3799, 7070, 14190, 18120, 21290, 24940, 28490 and 50110 kHz / RTTY - 7035, 14086, 21086 and 28086 kHz. QSL via their homecall. T32J via Masanobu Yamao/JA5JAQ, 222-44 Higasikakioi-cyo, Matsuyama-city, Ehime, Japan 791. T32A via Tsutomu Saiki/JA5EXW, 1663 Kitaumemoto, Matsuyama-city, Ehime, Japan 791-02. T32X via Kenji Sasaki/JA4GXS, 2-15 Ishikannon-cyo, Yamaguchi-city, Yamaguchi, Japan 753.

TM, BREHAT ISLAND (IOTA EU-074), FRANCE. Yannick/F5IEN, Bruno/F5JYD and Eric/F5SSM will be active from the Bretagne (Cotes-du-Nord West) Region Group December 25 to 31. They will also be active from some tiny coastal islands which count for the French Island Award (DIFM).

VP8, FALKLAND ISLAND AND A SOUTH GEORGIA ISLAND DXPEDITION UPDATE. Al, WA3YVN, informed NODXA that the SGI DXpedition is on track for January 4-19th (1995). But first begin looking for operators Al/WA3YVN, Jan/WA4VQD and Vince/K5VT to be active from the Falklands, December 24-30th. They will be active as much as possible on the low bands and the WARC bands before heading to SGI on the "Abel-J".

XR0, EASTER ISLAND AND SALA Y GOMEZ ISLAND (NEW IOTA). Bob Schmieder, KK6EK, and Carlos Nascimento, NP4IW, have announced they are planning and organizing a DX/expedition to these two islands next year. The tentative dates are August 26th through September 14, 1995. The amateur radio part of this project will include: activity on amateur radio, including activation of SyG for IOTA (a new one), low-band and digital mode operation, radio science including transequatorial propagation, beacons, and propagation predictability during low-sunspot conditions.

The scientific part of the project will include: the natural science, including collection of marine specimens (by diving), bird surveys, bathymetric charting, etc.; culture and history of Easter Island. Bob reports all permits are in place and they are planning to have a team of 24 operators to be active from both islands (12 on each island) simultaneously for 2 weeks (or longer). Radio callsigns will be XR0Y (Easter Island) and XR0Z (SyG). The honorary Expedition Leader for this project is Thor Heyerdahl. Amateurs who have expressed serious interest or committment include: KK6EK, NP4IW/6, KA3MUF, KD8IR, W6MKB, ON6TT, WJ2O, AB7BB, K9SJC, AA6KX, K1OCS, K1XM, KQ1F, WA5DAN, KD6ISY, and AA6TT. They are looking for both radio operators and divers. The duration can be 1, 2, or all 3 weeks. The team will be selected in February, 1995. If you are interested, please contact Bob or Carlos.

ZC6B, GHAZA. OPDX received a FAX from Arie Surkiss (4X6UO), HF Manager of the I.A.R.C. stating the following: "According to the Israeli Ministry of Communication, Spectrum Manager Division, the Ministry has not issued such a prefix and there is no Israeli involvement in this operation. As far as I know the ITU has not issued a prefix to Ghaza or Jericho." Meanwhile, Larry Price, W4RA (IARU Secretary), reports receiving a FAX from the "Palestine Amateur Radio Association", with information which may shed some light on the callsign being used. The FAX contained a newpaper article dated December 12, 1994 from the "Al Quds Newspaper" stating that the call was issued in 1948 to Dr. Sami Tarazi but never used because of the war that broke out.
Just before going to print, OPDX received an announcement stating that the Palestine Amateur Radio Club (Association) has invited JA1UT and JA3UB to help set up a station and operate next week. They will use their home calls /GAZA.

KEEP THOSE BALLOTS COMING! Ballots for the Fourth Annual OPDX/NODXA DX Survey can be found in OPDX.184. Ballots can be sent to the following packet and online addresses listed below.
SPECIAL NOTE: The Europeans are outvoting stateside. Come guys!

EDITOR'S NOTE: There will not be a bulletin next week, but there will be one the following week. Also, I would like to thank and wish all the contributors to the OPDX (there are too many to name) a Happy Holiday and New Year. Without them there would not be a OPDX bulletin. A special thanks also goes out to my wife who is my "Cheif Proof Reader" (It is great having a teacher for a wife, but I wish she get her ticket!)
.....73 and GUD DX de Tedd (KB8NW) and Family

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to:

SB ALL @ ALLBBS $OPDXNODXA.3
OPDX/NODXA 1994 DX Survey

THE FOURTH ANNUAL OPDX/NODXA DX SURVEY FOR 1994
Here is your chance to be counted. Deadline will be January 31, 1995,
with results in February. The questions of the survey will deal with:

1) The DXer of the year. This is a DXer who you thought was outstanding
in operating and handling the pile-ups from their DXpedition.
2) DXpedition of the Year (Group and Indivdual). Choose the best and most
well organized DXpedition that met the needs of the DX community.
3) The 30 Most Wanted Countries. Choose your 30 most wanted countries.
4) OPTION: Your personal comments about DXing in 1994.

Please use the ballot below. Votes will only be accepted in the
following format below.

```
---------------------------------------------------------------------
Your | DXer of the Year| DXpedition of the| DXpedition of the
Callsign | (Person) | Year by a person | Year by a group
and QTH | | |
---------------------------------------------------------------------
CHOOSE YOUR MOST WANTED COUNTRIES. (Please list only 30 of your most
wanted countries. List CW and SSB modes separately.
CW - AB,CD,EF
SSB - GH,IJ
---------------------------------------------------------------------
I work: [ ] only CW [ ] only SSB [ ] both CW/SSB
---------------------------------------------------------------------
Comments on DXing in 1994: (Text Any Length)
---------------------------------------------------------------------
```

* Just Fill-in The Blanks And Send It To One Of The Three Address:

>Any help an suggestions are greatly apprecitated!!

Ah, yes, this has become a common problem. With today's PCs having
clock rates above HF, the PC is no longer the main source of RFI
for HF rigs, but its harmonics sure tear up VHF/UHF gear. Now,
the big problem at HF is the monitor. It has fairly high power
horizontal and vertical sweep circuits, and they generate harmonics
throughout HF. The only solution is shielding.

Most monitors today have plastic cabinets, and little or no internal
shielding. You have to fix that. There are two ways, you can use
copper screen wire, or you can use some of the new conductive sprays.
I generally use the GC conductive spray. Take the case off the monitor
and spray the inside of it with the conductive spray. Test first to
make sure the spray won't attack the plastic. Examine the way the
monitor goes together carefully. If any high voltage circuits come
near the cabinet, glue fish paper over that part of the cabinet so
you won't get arcing. Fasten a bit of metal to the case so that it
contacts the conductively sprayed area, and run a wire from that to
chassis ground. That should do it.

If you prefer to use copper screen wire, just glue it to the inside
of the cabinet and proceed as above. The metal shadow mask inside of
color CRTs will shield the face of the monitor. If you have a monochrome
CRT, then you need to spray paint some copper screen wire flat black
and fasten it over the tube face. This will provide shielding, and
provide an anti-glare filter for the monitor as well.

Of course all the cabling should be fully shielded, with metal hoods
on the connectors, and tightened down for a secure fit. The power
cord may need to be wrapped a few times through a ferrite to choke
off any radiation trying to escape that way. Grounding the computer

and monitor to your station ground may or may not help. Sometimes it makes things worse, experiment.

The above should cure most RFI problems with the monitor. If you still get some hash, you may just have to live with it. Try tightening up the methods of ingress to your radio. Make sure the only way a signal can get in is via the antenna, and locate that as far away from the computer as possible. Again, fully shielded cables, ferrites on power leads, making sure you have good metal to metal contact at the joints of the radio case, etc are all needed. If you can still hear the hash with the radio's antenna disconnected, you haven't done a good enough job with the radio's shielding.

Gary

# 4439. Re: HAM radios

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-18 22:02:22 UTC
From: gary@ke4zv.atl.ga.us
Message-ID: <1994Dec18.220222.23179@ke4zv.atl.ga.us>
Source record: 254798

In article <3d02io$uni@msunews.cl.msu.edu> root@localhost.com (root) writes:
> Hmmm, could someone explain HAM radios to me? Like what all a HAM radio can
>do? costs etc? A few friends and I were thinking about getting some CBs so we
>could communicate within our city anywhere, (cars, house etc) but I've heard
>a little about HAM radio and want to know more. What would be the range of
>a handheld ham radio and cost?
>thanx

Amateur radio covers a very wide spectrum of activities. Amateurs have
bands from MF, similar to AM broadcast radio, to HF, similar to those
used by international shortwave broadcasters, to VHF and UHF, similar
to police and fire radios, to microwaves, similar to telco and TV relays.
Range can vary from a few thousand feet to thousands of miles depending
on a host of factors from band choice to time of day to local terrain
to the sunspot cycle. Power levels for the radios vary from under 1 watt
to 1500 watts. Modulation methods vary from manually sent Morse Code to
digital data transmissions to AM/FM/SSB voice to television transmissions.
In short, there's something for everyone interested in radio communications.

The cost of radios varies widely too. Depending on the band, mode, power,
and other factors, radios can cost from under $100 to thousands of dollars.
And, as an amateur you're allowed to *build your own* radios. This is one
of the attractions of amateur radio, you are allowed and encouraged to
experiment and build.

Because you are allowed to experiment and build, you have to pass a
Federal test before being allowed to operate. In the US, there are
several license classes with different priviledges. The tests cover
radio theory, rules and regulations, and for some classes of license
you have to be tested on receiving the Morse Code. For the handheld
radios you mentioned, the license you need is called Technician,
and grants all priviledges above 30 MHz. which includes those handheld
radios that operate in the VHF/UHF spectrum. If you want to use HF or MF,
you need to get the General license. This is similar to the Technician
license but also requires a Morse Code receiving test at 13 WPM. There
are other license classes available that give you acces to more frequencies
at HF, but Tech and General are the two of most interest when you are
starting out.

Now as to range with the little handheld radios, that depends on
terrain and whether you are using them direct or through a relay
system called a repeater. If you are using them direct in average
terrain, distances won't be more than a few miles, maybe less,
except under exceptional conditions. If you use a repeater to
relay your transmissions, and ham clubs have put up many repeaters

that you can use, then your range may extend out 30 or even 100 miles.

The new cost of handhelds varies from around $200 for a basic radio up to nearly a $1,000 for top of the line multi-band handheld radios. But there is a thriving market in used equipment. A radio that's a few years old will probably work just as well as a new one, maybe better in some cases, and will cost less, in the $50 to $300 range.

There are also mobile/base radios that can be mounted in your car or house that run more power and are generally more robust in receiving. Again the price ranges from a few hundred to around a thousand dollars for new units, with used equipment much cheaper.

Then there are HF radios. The cheapest of those new is around $600 with top of the line radios approaching $5,000. But the used market here is even better than with the VHF/UHF radios. There are some very good older radios that you can buy cheap. When buying used, you need an experienced friend along to help you make your purchase. The best way to make that friend, and find out about the many facets of amateur radio, is to locate and join a local ham club.

Current testing methods (at least for ARRL-VEC, for which I'm a VE, and
for W5YI-VEC) use Farnsworth testing at 18/5 and 18/13 for the lower speed
exams; standard spacing is used only for the 20 wpm exams. This was
changed, at least for ARRL-VEC, about 4 years ago; prior to that, the
13 and 20 wpm tests used standard spacing, with only the 5 wpm test being
Farnsworth.

Try using a call sign that has both an "S" (Sierra) and a "0" on SSB in a
crowded band situation - people forever get them crossed up, especially
with a 2 x 1 call such as mine. Not a problem on CW, though.

It's obvious that this Effenberger guy was told his brand new, state of the art, TV was a piece of shit, went into denial, and continutes to blame everyone who says _he's_ wrong. To him it's a bigger conspiracy than the Illuminati, Waco, Watergate and whatever.

I think it's time for Hams to go into giving future-shock mode. The idea is to have every piece of equipment in the shack, and in the rest of the house, a well shielded, grounded, ferrite beaded, high pass filtered boatanchor.

When the neighbor complains, invite him over and as you have him watch you on the air, ask him to make a phone call to his wife to check the interference in his house. Notice the shock as he picks up your old passive hybrid phone, and there's no interference. Have a TV on nearby, watch him go nuts as he sees very little herringbone while he gets blanked out. Of course you've boosted the cable as it come in to an obnoxiously high level, using RG-11 and real RG-6, not the cheap cable stuff, and have a pad installed inside the cable box to prevent it from overloading.

Don't tell him that because the signal radiates from the antenna, that there would probably be more RF at his house then in yours. And don't tell him ALL the interference cutting measures you've taken. Just say all this old stuff was made 100 times better than todays stuff and maybe explain the

difference between the class A and B computer certifications. Don't forget to emphasise the part about accepting the interference they get.

Since he's going to think that since you're closer to the transmitter you should have more interference, he will be more likely to believe that it is his equipment's fault. Just hope no one ever tells him about the "cone of silence" theory, and you may not be threatened again, but you may be bothered to install filters, sheilding, grounding, ferrite beads and boatanchors all over HIS house.

After seeing all the messages about K1MAN recently, I decided to listen to his program this afternoon while reading my e-mail (I had never heard it before, being a 99.9% CW operator). It's still on as I write this. He just spent 5 minutes promoting his "Sunday ham-radio call-in talk show", complete with several repetitions of his (toll call) phone number. How insane! The vast majority of the folks listening to him have ham licenses and can talk to him on the air, so why waste $ paying the phone company to talk to him? He ought to have a net, it might be more interesting anyway!

>would be carrying everything, and lead batteries are too weight-expensive, I
>would think. Any help would be appreciated (and might save a life!). ;-) Ed
>Please e-mail me direct if at all possible.... thanks!

Howdy:

First, to use a ham radio, you will need to get a ham license, if you don't already have one. You probably do.....

100 miles on 2 meters with a little HT is really not much of a problem depending on terrain. You can carry a small telescoping 5/8 wave antenna, and use alkaline cells in the battery pack for a dependable 5 or 6 hours of full communications, lots more if you mostly listen or use low power. The only problem with a little HT is that you will need to get high up on the terrain to use it dependably. If you can count on someone being able to climb the highest hill nearby, it may be quite reliable.

HF CW is a tricky thing. You can throw a wire over a tree, the whole unit might weigh in at 3 pounds including batteries (I did that), where you carry maybe 10 AA cells. You need to be able to throw up the antenna in a good spot (unless you add a tuner and meter, but that is more weight) and know CW and be patient. Not a quick response type rig here, if you are running a couple of watts on 40 CW. In fact, depending on the time of day, it might be that you cannot communicate close in, and only find someone a thousand miles away who can hear you. AND, it can be that no one would hear you.

I personally opt for 2 meters whenever I can determine from a topo map that I can get to some good hills in the area where I am hiking. It is very reliable when you can hit a repeater. Ask the rangers in the park where their repeaters are, and ask local hams. It might be a better bet.

: only. Has this changed?

Dave

Are you sure it was Staeside?

US hams are still only allowed to use CW on this band as far as I know.
There are foreign hams whose government allows them to use SSB in this band.
I'm not totaly sure but New Zealand and possibly UK hams have access on
SSB. There are also a lot of (illegal?) use by fishing boats etc.

This is NOT true in the extensive flying I do around the country. NOT TRUE.
You are NOT allowed to "listen" or even turn it on....there are some RF
emissions from any radio even when it is receiving and the greater wisdom
is not to risk the plane for even a tiny chance of problems.

The former advice of talking to the captain is the best. Do that!

It's not just good advice, it's required by FCC Part 97, which I quote
here for all to see (pay close attention to sections a and c):

97.11 Stations aboard ships or aircraft

(a) The installation and operation of an amateur station on a
ship or aircraft must be approved by the master of the ship or pilot in
command of the aircraft.

(b) The station must be separate from and independent of all
other radio apparatus installed on the ship or aircraft, except a common
antenna may be shared with a voluntary ship radio installation. The
station's transmissions must not cause interference to any other
apparatus installed on the ship or aircraft.

(c) The station must not constitute a hazard to the safety of
life or property. For a station aboard an aircraft, the apparatus shall
not be operated while the aircraft is operating under Instrument Flight
Rules, as defined by the FAA, unless the station has been found to comply
with all applicable FAA rules.

And this is the kicker, all airline flights *always* operate IFR, so you have to comply with FAA rules. The FAA rules basically say NO. The FAA rules require you to get *certification* from the operator of the particular aircraft that your *particular* radio causes no interference with aircraft systems on that *particular* aircraft. The operator of the aircraft is the airline, not the pilot. The pilot's permission isn't any good in this case. The airline has to do an actual certification check, and that takes about half a day with the aircraft out of service. They won't do it. So, you can't legally use a radio on an airliner.

# 4455. Buckmaster CD

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-19 02:37:59 UTC
From: dale.piedfort@pcappbbs.com
Message-ID: <9412190400076525@pcappbbs.com>
Source record: 254695

Just a word of warning the new Buckmaster Hamcall on CD has some blatant omissions, it it missing approximately 1% of the calls on the newest edition. 1% of the Amateur base is 6000 plus. A call to Buckmaster revealed they have been aware of the error for a long enough time to be prepared to send customers Floppy disks to try and correct the problem. It takes 2 floppy disk and a new directory to use the missing information. this fix will allow the CD to be used in conjunction with the CallBook Server available with Ka/PkGold only, if you wish to use it outside of the Gold Program you have to exit the CD and access the rest of the information on your Hard Drive. I for one would have waited for the April release if I had been made aware of this error. Caveat Emptor

SM>My question is, what good it is to tune up into a dummy load? I
>thought the purpose of tuning up was to match your transmitter
>with your _antenna_, and your tuner would have to _see_ the
>antenna to do that!

I've seen several other replies, so I'll keep this one (rather) short.

Although many of the radios in use nowadays are completely solid state
and require essentially no tuning, there still remain many of the older
tube rigs out there. These rigs do require tuning before you will get
them to generate a decent signal out to the antenna.

The purpose of tuning into a dummy load is to allow INITIAL adjustment
of the radio OFF THE AIR, where it won't cause unnecessary interference
to other communications already in progress on or nearby the frequency
you're using to tune up. Once you have the initial tuning accomplished,
you (attempt to) find a (semi-)open frequency and proceed with your
final tuning. This may involve a quick pass thru the transmatch and a
final pass thru the PLATE TUNING and ANTENNA LOADING of the transmitter.

With practice, the actual on-the-air tune-up can be completed in 10-15
seconds.

--> of interest to mobile radio installations

Here's an interesting article that appeared in my local paper Saturday regarding tires and static charge buildup that may have some effect on mobile radio installations.

This article appeared in the Saturday, Dec. 17, 1994 ARIZONA REPUBLIC.
"Click and Clack Talk Cars"--Tom and Ray Magliozzi--King Features

Dear Tom and Ray:
Every time I get out of my '92 VW Jetta, I get zapped when I touch any part of the car's body. Is there anything I can do about this annoying problem? How long must I suffer?
Every time I get out of my '92 VW Jetta, I get zapped when I touch any part of the car's body. Is there anything I can do about this annoying problem? How long must I suffer?
"Oh," the toll taker said, "another one of those (expletive) new Accords!"

--> posters note: Silica is basically glass (a good insulator). Carbon black is a semiconductor which finds frequent use in static discharge applications (like those smoky-looking anti-static bags that semiconductors get shipped in).

Hmmmmm....
scott nx7u@primenet.com

I'll do better than that, send it to me with a check for $1.29 and I'll mail it for you. Heck, if I can only get 1500 hams a year to have me do their mailing, I can afford that new H.F. rig.

Rick, WB7UGZ

P.S. please hurry before the postal rates go up.

Huh? How does that work? I thought you had to receive a satellite signal for a GPS receiver to work. You mean you can receive those satellite signals inside the cabin of an airplane?

The UK Licence does not prohibit the use of SSB on 10.100 to 10.150 -
however - the band plans - which are made by gentleman's agreement -
suggest that 10MHz is a CW band. Generally, this is so. I don't know
anyone locally who has used SSB on 10MHz.

Peter
G0PUB

BTW, the UK novice licence has a 3 watt CW allocation from 10.130 MHz
to 10.140 MHz. Please take the time to scan this 10kHz section for 2E0 2M0
2W0 2I0 2U0 2J0 & 2D0 callsigns.

ps. my first QSO using my G0 callsign was on 10MHz!

Joe
Throw away the KPC-3 and get a copy of WeatherMan from "oak.oakland.edu"
or write the author Paul Hitchcock at "paulhtc@netcom.com". He has a program
that decodes wefax with a SoundBlaster or other sound board with no other
external hardware. I had a $350.00 AEA PK232 which I sold when I started
using WeatherMan. Give it a try.

Here's the Wefax List:

==- Chart (UNID) indentification -==

1- Find out the technical parameters (LPM/IOC), only stations working
with Russian equipment using LPM 90, that are normally CIS stations
or Ankara Meteo.

2- If the station transmitting in LSB/288/352 (negativ) and LPM 60 it is
normally a Press photo station ie 60/352 or 60/288

3- Look in the corner of the chart for a indentification (4) number.
The first two numbers is the orginating center indicator (distributed
the chart).

01-09 WMCs: 01-03 Melbourne; 04-06 Moscow; 07-09 Washington.

10-25 AFRICA: 10+11 Cairo; 12+13 Dakar; 14+15 Nairobi; 16+17
Antanarivo 18+19 Tunis; 20 LasPalmas; 21 El Djazair;
22+23 Lagos

26-40 ASIA: 26+27 Khabarovsk; 28+29 Delhi; 30+31 Novosibirsk; 32+33
Tashkent; 34+35 Tokyo; 36 Bangkok; 37 Ulan Bator; 38+39
Beijing.

41-50 S.AMERICA: 41+42 Buenos Aires; 43+44 Brasilia; 45 Santiago.

51-63 N+C AMERICA: 51+52 Miami; 53+54 Montreal; 55 San Francisco; 56
Washington.

64-73 PACIFIC: 64 Honolulu; 65+66 Darwin; 67+68 Melbourne; 69+70
Wellington.

74-98 EUROPE: 74+75 Bracknell; 76+77 Moscow; 78+79 Offenbach;
80+81 Rome; 82+83 Norrkoeping; 84+85 Paris; 86 Helsinki;
87 Belgrade; 88 Oslo; 89 Prague; 90 Episkopi; 91 Ankara;
92 Frankfurt; 93 London; 94 Copenhagen; 95 Rota;
96 Athens

The last two numbers is the serial chart number by that center.

Example: 9220 92= WAFC Frankfurt (EDZW) serial number 20
6411 64= RAFC Honolulu serial number 11

Note: some stations using 5 numbers, than take the last four numbers.

4- Look for a four letter location indicator.

ADDN Darwin; AMMC Melbourne; BABJ Beijing; DEMS Delhi; EDZW Offenbach;
EGRR Bracknell; EKMI Danish Met; FAPR Pretoria; FMEE Saint Denis;
GOOY Dakar; HECA Cairo; HKNC Nairobi; KWBC Washington;KGWC Offut (USAF);
LEMM Madrid; LERT Rota; LFPW Toulouse; LIIB Roma; LTAA; Ankara; OKPR
Praque; RJTD Tokyo; RKSL Seoul; RUHB Khabarovsk; RUMS Moscow; RUNW Novo-
sibirsk; RUTK Tashkent; SABM Buenos Aires; UKBB Kiyev; VTBB Bangkok.

====- HF FAX LIST -====

All frequencies carrier, use for USB -1.9 KHz, for LSB +1.9 KHz

Marked (*) frequencies are changed or new in the list.

Note: USN Stations Rota, San Francisco, and Diego Garcia changed the map
format, and the schedules.
Between the maps now they turning the TX off !

SB NEWSLIN @ ALLBBS $NLIN.905
Amateur Radio Newsline #905 17 Dec 1994

Special Notes from Steve;
1. If you call the New York City number to hear the audio version of Newsline, it has been temporarily disconnected while the operator is out of town. It should be back on line in late January.
2. Some message munging and zapping is happening down the line on Fidonet. We're changing the message header format to compensate. We're sorry if your keyword scan didn't work right.
3. Happy Holidays to all!

- - -
Amateur Radio Newsline is produced as an audio service by Newsline, a service of the Westlink Radio Netowrk. The transcribed version is produced by Dale Cary, WD0AKO from materials provided by Newsline. and is jointly distributed to online services and bulletin board networks by Steve Coletti and Dale Cary.

Copyright owner is Newsline. Permission to reuse all or part of either this written or the audio form requires that the item be taken in it's entirety, not be subject to any further editing or commentary, and that full credit given to Newsline as the source.

Permission is granted to all amateurs who want to transmit the audio version in it's entirety over nets or repeaters. The text version may be used for packet distribution as long as it is sent in its entirety and the BIN header is kept intact.

NOTICE: When Newsline is transmitted in it's full form over voice or digital forms of Amateur Radio, it is recommended that the closed circut advisory be deleted. Audio, Computer, and Packet retransmissions must be made without the editing or deleting of any other part of the Newsline content. Unauthorized additional commentary to the original message is also prohibited. To do so is a violation of copyright and subjects the initiator to legal action by Newsline.

Newsline may also be excerpted for code practice transmissions, and may be used as a reference source in bulletin board discussions under acceptable Fair Use practices.

Any other use is not allowed without the expressed permission of Newsline.

Editorial comment, news items and all other business should be directed to
Bill Pasternak, WA6ITF, Newsline's Producer and Editor-In-Chief.
E-Mail - 3241437@mcimail.com or B.PASTERNAK@genie.geis.com

The following is a QST

Ham radio returns to Gaza. For the first time in almost five decades the prefix for Palestine is heard on the air. Also, a new UHF DX record is set in Texas, and the wall goes up, nationwide. What is the wall? Find out on Newsline report number 905 coming your way right now.

(*****
PALESTINE RADIO

A Palestinian amateur radio operator in Gaza has made his first communication in almost fifty years using the Palestine ZC6 call sign prefix. According to the news service reports, the QSO took place on Friday December 2nd with the Palestinian operator identified as Dr. Sami Tarazi. His full call sign did not appear in the story, but he is quoted as saying that the ZC6 prefix had not been used since 1948. That's when the state of Israel was created.
Tarazi, a scientist, said his communication with a fellow radio ham in Slovakia was followed by enthusiastic responses from all over Europe and Africa. He said that other hams he QSOed with welcomed Gaza and the Palestinian call sign back on the air.
Palestine Liberation Organization leader Yasser Arafat commissioned the setting up of the Palestine Wireless Society in January after the PLO took control of Gaza from Israel in May under their peace accord.
Dr. Tarazi says that he believes that the re-introduction of the Palestine ham radio call sign prefix will definitely enhance and foster the Middle East peace process.

(*****
AUSTRALIA JOTA MEETING

Australia will host the first Radio-Scouting Seminar in the Asia-Pacific Region. According to PA3BAR, the January 2nd to 4th meeting is intended for those responsible for the Jamboree on the Air organization at a national level. Its purpose is an information exchange, a discussion of several scouting and radio amateur related subjects and the development of mutual programs for future ham radio involvement in scouting. Visits to the 17th

Australian Jamboree are included.

(*****
RADIO FREE BOUGAINVILLE

Still in the South Pacific, word that the clandestine broadcast operation Radio Free Bougainville, thought off the air, is still operating. This, according to writer Gerry L. Dexter in his December column appearing in Popular Communications magazine. Dexter now believes that Radio Free Bougainville is on the air from a number of secret mountain locations and heard mainly on 3.870 MHz.
He says he has reports that the station is only running a power output in the area of 75 watts these days. Therefore is not usually heard in North America except possibly in the wee hours of the morning along the West coast.
For those of you not aware, Radio Free Bougainville has a ham radio connection. The station was established by the breakaway Bougainvillian government and was built with equipment donated by the Maine based International Amateur Radio Network. This is the group headed up by Glenn Baxter, K1MAN.

(*****
MCI BEGINS DIRECT DIAL SERVICE TO CUBA

MCI Communications has announced that it began providing direct dial telephone service to Cuba starting on November 25th. The new service gives consumers immediate and unrestricted access to family and business contacts on the island for the first time in more than 30 years.
MCI says that its customers are now able to pick up the phone and dial direct, avoiding previous difficulties of pre-arranging calls and waiting long periods before making contact.
The new service, which is provided in conjunction with Intertel, the international operator of Emtel Cuba, also allows callers in Cuba to place direct dial calls to the United States.
Last March, MCI reached an agreement with the telecommunications authorities in Cuba to provide service between the two countries. Following the approval of the FCC and U.S. State Department, received in October, MCI worked with the U.S. government and the Cuban authorities to provide the equipment necessary to start service.

(*****
NEW 5760 MHz DX RECORD SET

The ARRL says that a new over-land distance record has been reported on the 5760 MHz amateur band. On November 12th, Al Ward, WB5LUA in Allen, Texas, and Ron Stefanskie, W9ZIH in Malta, Illinois, worked over a 738 mile path. The previous over land record was 614 miles set by N6CA and N6XQ/XE2.
Writing in the North Texas Microwave Society newsletter, Ward

reports working W9ZIH on the evening of November 11th on 432 MHz with S9 signals. They then tried unsuccessfully to work on 5760 MHz.
In cooperation with Greg McIntire, AA5C, and W9ZIH, the first record breaking contact took place the following day between WB5LUA and Roger Schneider, WB9OJR, of Green Valley, Illinois who had joined the effort. The distance was 633 miles. AA5C and WB9OJR also connected at 630 miles.
Continuing the effort, about three hours later, at 16:52 UTC, WB5LUA and W9ZIH finally made the 738 mile contact, and AA5C worked W9ZIH at 733 miles. All contacts were on 2 way CW.

(*****
GENIE CALL SIGN SERVER

GEnie, the online service from General Electric, has launched an online call sign database. This, according to Glen Johnson, WB2MPK.
Johnson is the manager of GEnie's Radio & Electronics Roundtable. He tells Newsline that subscribers can now look up QSL information for over 600,000 United States hams online.
Johnson also says that GEnie will soon have full access to the Internet by the end of the year. This says Johnson will give hams access to thousands of programs, files and the most interesting aspect of the Internet. The famous newsgroups. Look for the Internet to come to the Radio Roundtable in a few weeks.

(*****
SPECTRUM

Spectrum is a new comprehensive communications newsletter, not to be confused with the radio program of the same name, that claims to uncover previously restricted and privileged information on a wide variety of communications services including Amateur Radio. Published by Matrix Communications of West Palm Beach, Florida. Spectrum says that it is a "full disclosure - no secrets" publication for the avid communications enthusiast. In addition to ham radio related topics, Spectrum also claims to offer in-depth coverage of cellular, government, aircraft, marine, military, satellite and all other communications services. Information is available from Matrix Communications, P.O. Box 16893, West Palm Beach, FL 33416.

(*****
MARCONI FIELD FOLLOW-UP

It appears that Guglielmo Marconi, the father of radio telegraphy, gets to keep his name on an Alabama baseball field. You may recall an earlier Newsline report about a proposal to rename Marconi Park in Birmingham, Alabama. The idea led to heated controversy, but not because of Marconi.
The proposal started with the Birmingham Barons Baseball team.

After having sports superstar Michael Jordan spend the summer playing with the Barons, team members suggested renaming Marconi Park in honor of Jordan's deceased father.
The Barons sent a $1,000 check to the city of Birmingham to help renovate the field. That lead to controversy at first. Some neighborhood leaders opposed renaming the park. The baseball team backed away from the proposal, but told the city it could keep the money. That is when a political fire storm erupted. Black city council members charged that the amount donated was an insult to area blacks. One councilman calls it a token gesture. A white council member defends the baseball team saying the Barons didn't intend to hurt anyone.
The idea to rename the field has been scuttled. Now the $1,000 many change hands again. A Black majority on the council has voted to send the money back to the Barons.
The park was named in honor of Marconi because he once visited the City of Birmingham.

(*****
DX

In DX, word that JE1DXC's Pacific Trip has been postponed due transportation problems. The trip included stops at 3D2, T2 and T30. No rescheduling date has yet been announced.

(*****
SHIPBOARD DX

This next operation is taking place as we go to air. Word that a club calling itself the Armadillo Gang is operating the first ever special event station from the retired aircraft carrier Lexington in commemoration of the World War Two Battle of Luzon. Operation is from Saturday, December 17th at 15:00 UTC through Sunday the 18th at 24:00 UTC. The call sign of the operation is WD5HOR with stations on 160 through 10 meters 25 KHz up from the band edge. QSL as directed.

(*****
THE WALL

Ever hear of the wall? Well unless you operate packet radio, the wall probably means very little. But to those hams under 19 years of age or younger, the wall is a place for them to leave their messages for other teens.
The wall was the creation of seventeen year old Christine Fuller, N9RVU. She got the idea that teens needed a place where they could communicate with one another and not bother those outside of their peer group. So last August, Christime posted an ALL United States packet radio message that suggested that teens nationwide begin communicating by posting notes on packet in the same way that they might get posted at school on a designated wall. She asked teenage hams to send in their stories, pen pal

messages, graphics, topics of teenage interest or anything they might like. All she requested is that the messages use a common and easily recognizable topic header that she titled the wall. It has been about five months since the wall got started. It was pretty slow until early November. Then something amazing happened. Teen hams from around the nation began to react to the outcome of this falls elections which swept the Democrats out of office and the Republicans in. Immediately, several major topics of mutual interest emerged on the wall. Two of the most popular have been ongoing discussions of newly elected House Speaker Newt Gingrich and the possibility of prayer again being permitted in public schools. And if you think that teenagers are not interested in the future of our country or that they are too young to have valuable opinions, just drop by the wall and look for yourself. It's a veritable goldmine of insight into todays youth and probably into the future of ham radio.
And we will add to those over the age of 19, "to read but please do not post your opinions." We oldsters who have been following the construction of the wall know that it is built on the spirit of the young. Old line ideas have no place and are really not wanted there. They can do nothing but bring this very important wall of the future, tumbling down.
So let us end our story about the wall by offering up our congratulations to Christine Fuller, N9RVU for having the imagination and creativity to begin the wall. She, and others like her are the future of ham radio, of our nation and of our world.

(*****
MORE NEWSLINE CHANGES

After only three months as Newsline Support Fund administrator word that Randy Hammock, KC6HUR is resigning. No, he is not tired of the job. Rather, its good news because Randy has accepted a new position at the Goddard Spaceflight Center in Greenbelt, Maryland. He will be operating portable 4 over the next several years and also getting to work with some of the leaders in the ham radio space effort including people like SAREX Astronaut Ron Parise, WA4SIR and AMSAT Vice President Tom Clark, W3IWI. Our thanks to Randy for his help the past few months and we wish him all the best on the East coast.
Replacing KC6HUR as our Support Fund administrator is a name and a call sign you all will recognize. That of Newsline anchorman Andy Jarema, N6TCQ. Most of you know Andy from his voice work in radio and television commercials. You are probably not aware that he is also a Certified Public Accountant and a computer systems engineer. His knowledge of accounting makes him the ideal person to take over the Newsline Support Fund duties. And with Andy also comes a new address where to contact Newsline. You heard it already at the top of the show. Its physical location is only down the road a bit in the city of

Arcadia, California. That new address is Newsline in care of Andy Jarema, N6TCQ, Post Office Box 660937, Arcadia, California 91006.

(*****

And for this week, that's all from the Amateur Radio Newsline. You can write to us at Newsline, P.O. Box 660937, Arcadia, California 91006.

I wanted to wish everyone happy holidays and mention that we now have the QRZ Ftp server and QRZ HTTP server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look: ftp.qrz.com

As well as http://www.qrz.com where we have a mosaic-like interface to the ftp area as well as an on-line callsign database server.

73,

-fred

You need a window seat, and there have to be at least 3 sats visible from that window. With all 24 active now, that's pretty likely.

# 4473. Re: 2m ham vs cellular

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-19 13:45:26 UTC
From: garyb@psych.ualberta.ca
Message-ID: <garyb.22.000DC245@psych.ualberta.ca>
Source record: 254704

I did a little study of this for north central Alberta. I got coverage
maps from the cell providers and found that only the more important highways
were covered, with limited (maybe 10-20 miles) coverage off to the sides.
The ham repeaters, on the other hand, covered a larger area on the
routes of interest to me, and had the advantage of range far into the bush.
An RShack handheld with a twinlead j-pole was great for the backpack. A 5/8
antenna on the car had no trouble with range. Lots of the repeaters have
patches, or links to major centers. If you had a genuine mayday, half the
province would be ready to help.
Price? ... the cost of the handheld vs ongoing monthly charges.
With licences being so much easier to get (vs 20 years ago when I had to
sweat thru code and a ton of theory) even my wife is enthusiastic about it.

>Looking for mod on radio shacks 404 ht. You'll make alot of peaple happy.
>especially me.

What mod do you want, Dom? Neither of the Radio Shack units can be
tuned out of band. The firmware doesn't permit it, and the narrow
helical filters in the front end wouldn't allow it anyway. That's
why they are so great in high RF areas. The only out of band mod
I've seen is to attach a PRO-43 to it with duct tape.

The equation you have stated is a fair one. I see your point.

Baxter / world = BAXTER

However we don't plan to give up the frequency to some mad man in maine. Not tomorrow or the day after that. It's not just one or two people. It's thousands. This is our home. I know some rocket scientist is going to come in here now and tell me that the frequency cannot belong to anyone. That person lives in a shell. The truth is when you have hundreds of people all friends and enemies for decades that have been monitoring a frequency to keep up with each other, that's HOME.

Now if Baxter or anyone else thinks that he is going to move in here and fire up on it and everyone will just run and scatter like a bunch of lost sheep he is living in a dream world.

"Just QSY Don, I'm sorry to say that there is no sense in fighting" The H_____ you say. Just where do you propose the hundreds of people that have been on that frequency for decades move to?

The really sad thing is that there are plenty enough people that could get involved in this thing and stop that lunatic in Maine if only they would get off their lazy a__s and do something. Don't you realize that if he succeeds in what he is doing that there will not be anything that can stop the next one and the next one. Is this some kind of self destruct mechanism that everyone has toward a hobby that is probably the greatest of all hobbies?

Take your grim predictions else where hoss! Thank you very much.

Deletia

One of the ideas that has been suggested to me, and I have bought into but not yet tried out, is a 2m J-pole made from the old flat TV antenna lead. The neat thing about this is, with a slingshot, a small fishing weight, and some fishing line, you can easily hoist this antenna to an incredible height in a nearby tree for exceptionally improved TXRX. The whole package (slignshot, HT, coax etc) shouldn't weigh more than 5 lbs. That's a lot for my backpack, but for canoeing it shouldnt be much of a problem.

Also, Campmor has a nice solar powered AA battery charger which may be worth investigating. Place a couple of these babies on the bow and stern of the canoe, and you would always have fresh batteries. Unless you enjoy ragchewing in the wilderness, which I don't...

Another idea - take several ziploc bags for all your radio stuff to keep it dry in case of an accident. My Kenwood TH78A has been through the same class III-IV rapid three times, and I have yet to come out downstream still in the canoe. I'm not much good, but I have a lot of fun trying. The Kenwood survived the most recent trip in much better operating condition than me.

I wish I were going along on your trip. Good luck!

: I currently have a tech Ham license.
: I will be visitin Sweden for a few months.
: Can I operate a 2m radio in Sweden?
: Somebody told me that US radios will not work with
: the repeaters over there.

All repeaters in Sweden are activated by a 1750Hz tone and I think most US 2m rigs doesn't have it as standard. So that might be a problem, but you could always jump in when another station has activated the repeater, or if you have a good musical ear you might try a whissle. Many repeaters are not too fuzzy about the tone.

We use 25/12.5 kHz channel spacing but most modern rigs can be set up to use this step size. Output frequencies are between 145.600 and 145.775 with input 600kHz lower. I think most rigs have programmable repeater offset so that should also be ok.

: Anybody know about the reciprocal agreements regarding licensing
: between the FCC and coutries in Europe?

Sorry, I have no info on this. Somebody at ARRL should know.

>jerry
>N3RKD

Jerry,

Couple of things, mate.

Number one: good for you to make all your to date HF contacts in CW! Keep going!

Number two: don't worry about not getting QSL cards immediately in return. I myself am pretty lazy when it comes to that, but I eventually do get the responses out.

And lastly, number three: it's up to you whether or not you want to include an SASE with your outgoing cards. I usually don't with the exception of those rare DX catches. Although others may differ, if I'm going to put out the money for a stamp, the other station should as well. That's what I'd expect from other hams who send QSL's to me (and I haven't had a problem buying stamps), and that's kind of what I expect when (and if I ever do) initiate QSL's.

Once again, keep going on the CW! I can't preach that enough. And congrats on getting on the HF bands!

Later.....Rich/WH6NU

: Carling) writes:

: Many things depend on the phone in use. I'm sure you've checked out the
: QST article on telephone interference and the FCC ratings of phones. FCC
: found that phones CAN be RFI free if manufacturers WANT. Our SONY
: cordless is more resisitant to interference than anything else in the
: house, for instance. It's probably cheaper to buy the right phone than to
: spen all the money on filters and chokes that may or may not work.

I would *LOVE* to have the model numbers of consumer electronic equipment that is relatively immune to RFI problems. Unfortunately, hams don't usually contact me here to say that they are *not* having a problem with RFI. If anyone has any specific information on what devices work well near amateur installations, please let me know; I will add them to our rather meager files on immune devices.

I will point out one thing, though. The "bullet-proof" phones that are being sold by Pro Distributors and TCE are "plain old telephones." They lack the bells and whistles usually wanted by consumers. It is relatively easy to design a simple telephone to be RFI-proof; it is a lot harder to design EMC into more complex devices. Not to say it can't be done, but it can't be done for $9.95, or for a phone you get for free with a fillup. :-)

: Let's wake-up the author of this article and the newspapers
: that published it, shall we?? Can you all help me with this??

As a matter of fact, ARRL HQ staff has had a number of opportunities to work with newspapers and other news types on this issue. I recently had a chance to spend about an hour with an AP reporter, who ended up writing a balanced article on the subject. Many times, it is best if HQ doesn't get involved with the letters to the editor on these issues, especially if local hams are already involved in a response. However, I *believe* that this is the article I talked over with Steve Mansfield (our PR Manager) just last week. If so, he is working on a reply as a letter to the editor.

Nonetheless, it is still important that local hams get involved in this, too. Although a few hams are less than diplomatic when faced with an RFI problem, most are willing to help a neighbor resolve an EMI problem regardless of fault.

ARRL HQ has prepared a pamphlet about EMI designed for the neighbor of a ham. It explains EMI in relatively non-technical terms and presents a fair and balanced view of responsibilities. A copy is available for an SASE from the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111.

|> the purpose of the transmission is to disseminate code practice or
|> amateur radio bulletins, not to cause interference.

Let me see if I folow your logic here. I want to call CQ in hopes of raising some rare DX. So I just turn on my radio, plop on a frequency (even one that is currently being uised by W1AW) and start calling CQ. After all, my purpose is to attract some DX station, not to cause interference.

|>
|> As a practical matter, it simply isn't possible for W1AW to listen
|> before transmiting. They use something like 10 different frequency
|> bands simultaneously. Even if they had 10 operators tuning each band
|> looking for a clear frequency, there is no guarantee they would find

|> the many W1AW listeners could then never be sure where to find the
|> broadcasts. That would be especially troublesome on the digital modes,
|> where many listeners use unattended fixed-tuned receivers.
|>

Here's another logic charm. Since when does the inconvenience or troublesome nature of a law make OK to just ignore it?? I personally find the 55 MPH speed limit to be very inconvenient. "But officer, do you know how troublesome it is to keep my Alfa-Romeo under 55??"

It may be that the service that W1AW performs has some value, but to argue that under the letter of the law the way they do it is not illegal is patently absurd. If you apply the same standard to them that is applied to indiviual hams, citations would definitely be issued. If their procedures can not be be made to conform to the law, then either get the law changed or move the "broadcasts" to frequencies and services where they are legal. But don't stand there and say "we`re W1AW, we're better than the rest of you shmucks."

# 4491. New Neat Stuff!! (micro GPS Rcvr)

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-19 17:42:45 UTC
From: helliott@losat.redstone.army.mil
Message-ID: <3d4kba$966@ra.nrl.navy.mil>
Source record: 254687

From Aviation Week and Space Technology, December 5, 94, page 57:

..."A team of researchers from the Mayo Foundation and Motorola showed Institute of Navigation GPS-94 attendees here a GPS receiver designed for embedded applications that they believe is the tiniest receiver to date. It occupies less than 0.8 cubic inch.
...
The receiver measures only 1.42X1.43X0.39 inch.
...
Designing a micro GPS receiver posed some challenging problems. Electrical isolation to protect the analog from digital signals was a major concern in such a small package.
...
Initially, commercial automatic computer aided design (CAD) tools were used to evaluate the placement of components and routing options for the circuit. CAD tools failed because they did not consider all necessary circuit sensitivities.
...
The old skills were needed again when a critical microstrip tuning element had to be trimmed so the analog circuits would operate. After using an exacto knife to manually tune the first few receivers, technicians were able to program a laser to replicate the trimming."

Imagine this, Grady Ward - A dual band HT with built in GPS! Or better yet, an emergency personal locator, with a built in GPS. Exact location reported to authorities digitally. Its not far away (pun intended). We better make ourselves useful.

## 4493. More info available on Icom P2AT?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-19 18:23:47 UTC
From: Paul_M._Butterfield.wbst129@xerox.COM
Message-ID: <"19-Dec-94.13:23:44".*.Paul_M._Butterfield.WBST129@Xerox.com>
Source record: 254699

I'm a newcomer to amateur radio. I have recently purchased a very sexy little Icom 2m HT, the P2AT. As I haven't yet tested, I cannot push that little button labeled "Push to Transmit." Hence, I have to content myself with learning as much as possible about the others features of the radio.

I am fascinated by Icom's interesting approach to controlling the software of this little rig. Through interactions with ham friends, I have learned that I can enable extended receive (was ~130-178 MHz, now 110-180 MHz), and six-digit frequency entry by holding in a group of buttons while turning on the power. I am curious what other functions a thoughtful Icom has enabled via software. Does anyone point me to the complete list of functions that are programmed into this tiny, but complicated little box?

Please copy me in on any response as I get only a sporadic retransmission of this list.

## 4494. 2-meter HAM vs. Cellular

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-19 18:30:39 UTC
From: walshs@gate.net
Message-ID: <3d4jgf$3b2j@tequesta.gate.net>

I read somebody's message discussing this subject a couple of months ago, and I'd kind of like to get some opinions from people familiar with both. Which do you think would be better for emergency communications while on the road - a cellular phone or a 2-meter mobile radio? For starters, let's get the obvious out of the way: Yes, I know I would need to get at least a no-code technician license to use the 2-meter, and no, I am not interested in the day-to-day use of a cellular phone. What I would really want it for is emergency type communcations when I'm out camping 30 or 50 or 1200 miles from home. Specifically, I am interested in things like comparative ranges, usability in mountain/desert areas, and last but not least, cost. Anyone out there with an opinion on this subject?

>

And again. What error are you pointing out Brian? A couple of facts for you. Jeff Herman, nh6il is very much pro-code. And he a very much against homosexuals. These are facts. Period. Nothing debatable about it.

Unfortunately, Jeff Herman tends to go on and on about both subjects if given the chance. I merely stated that given the way Jeff goes on about no-code being the end of amateur radio, and given the way he goes on about homosexuals, the next leap of faith would be that the two must be related

somehow. Sure it's ludicrous. That's my point.

What's the matter with you people anyways? Unless I advocate hunting down homosexuals and publicly executing them, I must either be advocating their lifestyle, or (gasp) I'm a heterophobe.

What you insist on believing in your own world is fine. How you look at the world by yourself is fine. I'm certainly not going to tell you what to believe in. But as soon as you come out into the open and start spreading your homophobic hate here in a public forum, I'm going to jump on you like a ton of shit. Got it? I certainly don't have to be "one way or the other" to not tolerate this bigotry. I certainly wouldn't want to be the one I caught beating the shit out of my son because they "thought he was queer".

[ Written by Martin Niemoeller, the German Lutheran pastor arrested by the Gestapo and sent to Dachau concentration camp in 1938; the Allied forces freed him in 1945: ]

In Germany, the Nazis first came for the Communists, and I didn't speak up because I wasn't a Communist. Then they came for the Jews, and I didn't speak up because I wasn't a Jew. Then they came for the trade unionists, and I didn't speak up because I wasn't a trade unionist. Then they came for the Catholics, but I didn't speak up because I was a Protestant. Then they came for me, and by that time there was no one left to speak up for me.

Last week I had occasion to make a business trip from San Francisco
to Baltimore, Washington National, Cleveland, Cincinnati, and
back to SFO. I took my new Eagle AccuNav Sport GPS receiver with
me.

Both Delta and United allow the use of handheld GPS during the
cruise segment of the flight.

First of all, the Eagle performed flawlessly. For most of the trip, I had no
trouble picking up four satellites through the aircraft window and
often had five. On the trip out I had arranged for South facing
windows, but the unit seemed to work equally well facing North or
South.

Leaving SFO, the Eagle acquired a lock within just a few minutes of
turning it on. It was very interesting watching the speed of the aircraft
increase as we climbed the last few thousand ft. to our cruising altitude.
The Distance to Go indication clicked off the miles with satisfying
regularity. On the trip back, the unit had to enter cold start mode
both after I initially turned it on and after I re-started it after dinner.
It took about 15 minutes each time to re-acquire the satellites, but then
maintained a steady lock for the duration. I wish I could have had it
on for the approach and departure phases of the flight, but I was a good
citizen and turned it off :-)

Before departure, I entered waypoints for major cities scattered across
the country. On the unit's graphical display I could observe our
position with respect to each of these locations - often with several
on the display at once. The display can be scaled from one tenth of
a mile on a side to one thousand miles on a side. The direct path
to our destination and the actual path taken are continuously
displayed and updated at one second intervals.

I've always been frustrated on commercial flights with not knowing exactly where over the country I was... no more. I took with me a Global Navigation Chart (#2) which fits the entire country on one (rather large) sheet of paper. I could track our course on a continuous basis throughout the flight - even when over a cloud deck.

The one problem that I saw with the unit is that it displayed an "Arrival Alarm" several times when we were nowhere near our destination. This always happened after I had been playing with the cross hair function. I suspect a software problem but will have to do more testing to be sure. I also suspect that it does not calculate great circle distances to the destination, I've yet to plug in a destination on the opposite side of the globe to check on this.

All in all, I'm extremely satisfied with the unit. It consumed two sets of batteries on the trip. Since it is not known as a frugal user of power, I expected this. In Cincinnati the folks at the X-ray machine wanted to see what the spare batteries were - no one else seemed concerned :-) or :-(.

Regards,

Rick

Interesting question. You mention that you would like to use it when camping or in remote locations. In remote locations of Texas, I have no idea what the cell coverage is, but I know there's a repeater in Big Bend National Park and one in Guadalupe National Park. I WILL say that in general, from a remote location, you probably have a better chance of hitting a repeater with your handi-talkie than you do accessing a cell sight. Now, that will change over the next few years as more and more cell sights get added to the system. However, the cell coverage is still concentrate along interstate highways and larger towns.

The risk you run with ham radio is being able to key a repeater, but not getting any response - no one may be listening.

On the other hand, with cellular, you have the continuous monthly charge, usually a minimum of $30/month, and that will buy alot of 2 meter radio!

So, it's kind of a wash. When I go camping, I try to take both with me - my pocket phone and my dual band talkie. And I've been in places where NEITHER one works, so go figure.

In the city, if you don't want to fork out the money for a cellphone, then 2-meters is great for emergency communications, and you'll have the added benefit of usually having alot of volunteers to come and help you if you're in a bind (out of gas, accident, etc), whereas with cellphone you are limited to commercial services.

This depends completely on how the repeater is wired. The machine I operate will NOT pass tones. It is capable of regenerating a tone if I configure it that way, but it has specific filtering to make sure that CTCSS tones don't pass thru!

Again, this is specific to the reapeater hardware. Your mileage WILL vary!

Go for the Ham ticket. The 2M HT will operate direct or through a repeater. The Cell phone must have a Cell Basestation to operate. Cell phones are expensive. from $20 to $100 / month plus air time. and roaming fees! generaly a $20 admin fee + $1 per day which really adds up. There are areas of the country that cell phones jsut don't work buth they are getting smaller.

A couple of 2m HT's on direct can give you several miles range and it only takes no-code tech licenses to operate them. with no Time charges.

I have to disagree with several of your points. They do
not have absolute authority to take things away from you. There
is a short specific list of items that cannot be brought on board
a commercial aircraft. Two way radios are not on that list. Look
at all the cellular phones that come on board, two way radios folks.
They can ask you to demonstrate function as they do with computers
in some airports but they cannot take them away from you. DON"T
PUT ANY ELECTRONICS IN BAGGAGE it will be stolen and you will not
be covered. Read the fine print on you ticket jewelry, electroincs,
furs, money are not covered for loss. As to operating the FARs do not
allow the use of non-Type Accepted radio equipment during IFR flight.
All commercial flight is IFR thus no Ham equipment can be used.
The receiver IF leakage is an old husbands' tale. (like a wives' tale
but more technical) but it is in the rules. Some airlines like Delta
have taken a more reasonable stance with respect to scanners but
transmitters are verboten. I travel many many airline miles each year
taking all sorts of transceivers with me in my hand baggage never had
any trouble in the USA; overseas your mileage may vary.

one thing you have to remember is that with a ham radio your group will
be in constant contact with each other. you can join repeaters and get
autopatch for about $20.00 a year or less.

so, in effect, a ham radio is both a two-way radio and a cell type phone.
later in time if you can get the code,(or in a disaster situation)you can
operate on ten meters to reach out farther. with a no-code license you
get six meters that you can use legally.

most ht's will open up and let you scan other freqs.

IN AN EMERGENCY. YOU ARE ALLOWED TO USE POLICE FREQS. AMBULANCE FREQS.
TO SUMMON HELP. THIS IS TOTALLY LEGAL. I HAVE VERIFIED THIS FROM ALL SOURCES.
there is a sub section that allows ham operators to use any freqs to
obtain help in disaster or emergency situations. i know severa;l
people that had to summon the police to the scene when no other type of
communications were available.

so don't worry about no cell site or ham repeater. you can just use
the police freqs to obtain help if stranded. the nation wide police freq is:
155.475mc.

so go and get your ticket. there are ham fests that you can buy
good but used equipment for under 200 dollars and no more fees after that
are required. unless you want to join a repeater for autopatch and other
functions that run $20.00 or less. other functions might be:temp,time,
voice-mail,repeater links, etc...

good luck

kevin

Cellular phones have come way down in price recently, and I heard that some companies are offering special deals for people who only want one for emergencies (i.e. no fees, but a heinous per-minute rate, which you wouldn't mind paying if you have a broken leg in the middle of nowhere). 2-meter ham equipment is pretty cheap, and there is absolutely no charge for the use.

For range and coverage in the backcountry, I prefer ham radio every time. There are repeaters in some pretty remote areas, where it will never be profitable to put a phone cell, and you don't even need a repeater to reach someone - many hams listen on simplex frequencies. The signal from a ham handheld is also more likely to travel further, though not by a lot. Finally, nobody can pick up a phone in their home and accidentally dial my number on ham radio. Or even do it intentionally. I can keep a schedule with someone if I think other people might really need to reach me, but I think part of the whole experience is being able to hit the "off" switch and tune out the world.

Finally, the biggest advantage of ham radio is one cellular phones will never be able to touch. On any repeater, you can plug into a network of local knowledge immediately and easily. And if the local hams know you're out there, that's another group of people who know to miss you if you vanish. Try to get that kind of connection with a phone.

>usability in mountain/desert areas, and last but not least, cost. Anyone
>out there with an opinion on this subject?

I've been looking into this myself and in the process of getting my
no-code tech liscense, and then my general.

I don't think cellular will cover most places in the boony's. 2-meter
is line of site, but covers a lot more than cellular. Mainly because
2-meter is used by boony folks quit a bit. The no-code book I'm reading
states that there is almost no place in the USA where a 2-meter
repeater can't be hit with a handheld ... if your within line-of-site
(AKA no hills).

The best way to go is to get your general liscense and bounce your
signal off the atmosphere so you have access anywhere for sure, and
*much* further (I've heard 100w 1500miles away and have heard of hams
picking up US->ASIA on 10w). There is a ton of traffic on SW and your
are guarenteed there will be dozens of people to talk to if you get
in trouble. Seems 80meter and 20meter get the most traffic.
A HF transmitter costs about $500 minimum.

The kenwood TS-520 was recommended to me.

PS: if you just want to listen in get a Sony 7600G for $150.

A friend was given about 100 feet (out of a 300+ foot tower that fell) of tower that he says is either Rohn 45 or Rohn 55. He's not sure which; he's been given assurances from different people that indicate that it is both.:) Here's YOUR chance to weigh in on this issue:

It has the welded-on section matings, not the reduced-diameter ends that fit into the normal-size end of the section above it. It is big, triangular-sectioned stuff. So, does that make it commercial 45 or 55? Is this enough information to tell?

Your considered opinions/expertise are appreciated.

>a cell phone and not pay the monthly bill, but 911 is always active.
>
>Also, there are different plans. Cheapest in this area is 11.75/month, with
>no on-air time (you pay by the minute).

A similar discussion has been going on in comp.dcom.telecom.tech.
Several people mentioned that many small (rural?) cellular providers
will offer "roam-only" service to attract out-of-area customers.

Here's part of an article on the subject. Service is $36/year,
but calls are $3.50/minute. In an emergency, though, that's not too
bad.

Message-ID: <9412141842.AA12895@hazeltine.com>

Scott Crumpton <scc@nervm.nerdc.ufl.edu> asked about low cost
cellular service suggestions.

Last month, as my current annual contract came to a close,
I surveyed providers for their low cost, offpeak, plans for
calls made in the Long Island NY (516) area. After calling
about 20 providers across the country, I found 4 contenders:

Lindsay Communications of Boston MA 800-370-4445
Helptel Plan - $35/year $3.50/min nationwide ($2.50 in 617).
plus $45 activation.

... [three "normal" plans ($20-30/month) deleted]

Thanks,
Lenny Rosenblum N2KRW (Huntington NY) - rosenblum@hazeltine.com

# 4522. Yaesu FT530 tech question...

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-19 23:04:52 UTC
From: mbegley@crl.com
Message-ID: <3d53ik$frr@crl7.crl.com>
Source record: 254714

I'm really hoping that someone can help me with this...

I just bought the "Technical Supplement" for the ft530 and it comes with the schematics for the mh-29a2b (that really nice remote microphone for the ft530 and ft51r). This is why I bought the supplement in the first place to find out more about how the mic communicates with the 530. The specs say that the microphone has a data protocol of asynchronus, 9600 baud.

Ok, so that answered my question. But I still don't know the format of the parity and the data bits, etc. And I know not the commands that the microphone sends to the radio to make it change memory channels or scan or anything else.

My idea was to build an interface for the ft530 to connect to my computer via rs-232. And I'm sure that I'm gonna have to use a max232 chip to get the voltages right as far as the 5 volts on the radio with the 12 volts on the computer's rs-232.

Does anyone know where I might get more info on this...I have called yaesu tech line and the guy I talked to told me that the mh-29 doesn't even connect to the 530. (Although I know better). Anyway, thank-you.

President's Report

This is Michael Corbin VK2PFQ.

It is not my intention to spoil anyones' Christmas, however, since the following information is already on "Packet", in a brief form, then it's only fair that those who do not have access to this medium, should be as informed as everyone else. You might get yourself a pencil and a large piece of paper....Although the need for them is not immediate. I'll give you ample warning when to start writing things down.

An appropriate title to what I am about to tell you might be..... "Merry Christmas to all Hams from the SMA". or "Nothing escapes Federal Government New Year Tax Hikes...Not even Ham Radio". I must emphasise that the amounts quoted are not necessarily those which will be eventually adopted, they could even be....MORE!!! The following is an abridged account issued by The Federal Office of the Wireless Institute of Australia. It's headed....

AMATEUR RADIO LICENSES - NEW SMA PRICING POLICY

Preliminary figures for new Licence fees, to be introduced next year, have been released to the W.I.A. by the Spectrum Management Agency (SMA).

There are to be significant rises in the cost of Amateur Licenses. It should be noted, however, that these are preliminary figures and that the final charges, may vary by as much as $10.... up or down!

The licensing costs were released to the WIA at an SMA Liaison meeting in Canberra on 5th December.

The previous hundred-plus licence categories covering all services are to be reduced to just 18. Amateur Radio will be a single category, with seven sub-categories under the new Amateur Regulations to be announced early in 1995. Note the inclusion of the foreshadowed Intermediate and Novice Limited licences, and that beacons and repeaters will be classed in sub-categories of their own.

COSTS
The issue/re-issue cost depends on the type of licence. To first issue a licence costs the SMA about $140, it was revealed, but as Amateurs generally keep it for ten years, this is

amortized over that period, yielding a cost of $14 a year. The cost to Renew a Licence is about $11, so the Issue/Re-issue cost will total $25.

THE SPECTRUM MAINTENANCE CHARGE is the proportion of costs of the on-going work of the SMA. (Personally I thought that "the Spectrum" maintained itself..... with a little help from the Almighty!!)

THE SPECTRUM ACCESS TAX is based on the principle of... "spectrum denial." Primary spectrum users, Amateur Radio, deny use of the spectrum to other users. It is on this basis that the government charges the Access Tax. The SMA's "pricing formula" takes into account five factors: Spectrum Location (i.e. frequency), Geographic Location (VHF-SHF spectrum can be "re-used" at sufficiently distant locations), Bandwith and Area Coverage. The formula "values" the spectrum according to usage and demand. i.e. In Sydney, UHF attracts a high "VALUE". On the other hand, the "VALUE" of HF is low, as it is shared by Amateurs ....globally. In calculating Spectrum Access Tax, the SMA excluded Amateur bands on which Amateurs are the secondary service.... i.e. because it is "shared" use.

The figure arrived at, taking into account all the primary amateur bands and applied nation-wide, was divided by the total number of Amateurs. So, if we had.... MORE AMATEURS... licence fees should decrease!!! The Minimum Access Tax fee is proposed to be $20. The Spectrum Maintenance charge is about 25% of the Access Tax. Initial work on Amateur Licence fees yielded figure in the $300-$400 range. The SMA believe therefore that Amateurs have been given "a pretty good deal". All fees are to be finalised by 1st March,1995.

Beacon licences will cost less because the WIA Divisions provide the initial spectrum planning function through the Technical Advisory Committees. The proposed Repeater licence fee was calculated on an Australia-wide basis. UHF CB repeaters will attract a licence fee. As you are no doubt now aware CBers don't pay fees. Citizen Band Radio is a Class Licence.

FIVE-YEAR LICENCES will be introduced, for which the Re-issue cost will be discounted, if payment is made in advance. So a five-year unrestricted licence will cost around $301, rather than $345.

In future, if an Amateur gives up a licence (e.g. becomes a Silent Key), a refund of the "unused" proportion of the licence may be provided.

The WIA is continuing discussions with the SMA.

Now if everyone has a piece of paper and a pencil.....Divide the page into five columns. I'll do this slowly so everyone can get it

down. Now head the columns up as follows:

Issue/ Spectrum Spectrum
Licence Class Re-issue Maintenance Access Tax Total

Now I will read the information to you across the page...

UNRESTRICTED $25 $9 $35 $69

I'll read that line again so that you can get it down correctly. The balance will then be straightforward. The next licence class is...

LIMITED $25 $8 $34 $67

INTERMEDIATE $25 $8 $34 $67

NOVICE $25 $5 $20 $50

NOVICE LIMITED $25 $5 $20 $50

BEACON $11 $5 $20 $36

REPEATER $25 $9 $35 $69

Further information will appear in the January issue of Amateur Radio Magazine.

Now what should we do about all that you might ask, well, I for one intend to write a letter to my Local Member expressing my complete dissatisfaction. I encourage all listeners to do the same. The more who write the greater hope we will have of squashing the whole thing.

The latest thing in politics is to bounce ideas off people early. A good example of this was a couple of weeks ago when the Federal Government "leaked" information to the Press about increased Taxation in the New Year....Little did we realise that Amateur Radio....A HOBBY....Our Hobby would be included. The idea is to gauge peoples reaction to a proposal. If the people don't complain then they, the government, go ahead with it. If we do complain and complain loud enough, then even though increases might still be introduced, they might not be as large an increase as has been suggested or even.....no increase at all.

If time permits this Division will place an insert in AR magazine. It will be some type of "form letter"... you fill in the blanks and post it off yourself to your local member. Personally I am amazed that the Federal Office has kept this information to themselves for this long. It is as if they accept the increases. Lambs to the slaughter so to speak. Well this Lamb is not going quietly. It's a Consumption tax if ever I saw one.....But, such statements could be regarded as political so forget that I anything about a Consumption Tax!!!!! What a wonderful way to end 1994. Hmmmmmmmm!!!

Finally may I take this opportunity to personally wish all Listeners a Happy and a Holy Christmas.....May the New Year bring each and everyone of you all that you wish for yourselves.

See you all next year

DIVISIONAL NEWS

The 1995 broadcast roster

The first roster for 1995 will be drawn up during the Christmas break. It will start on the 8th January and will run till the end of March. Would all broadcast team members please contact Steve VK2QZ with their unavailability dates before the end of December, so the roster can be finalised as soon as possible.

If anyone listening would like to join the broadcast team you're invited to contact the Parramatta office on 689-2417 or directly to Steve VK2QZ -- Steve's telephone number and address is known to most people, his address of course is in the call book. No special skills are required nor is an amateur licence, although we are in need of a few more full call amateurs and people with good news-reading voices.

Submitted by Steve Pullan, Broadcast Roster Coordinator

**********

The N.S.W. Division of the W.I.A. runs Amateur classes and examinations, a free QSL bureau for members, slow morse practice on the 80m band, a technical library and bookshop, and Trash and Treasure sales on the last Sunday of every odd-numbered month.

You're invited to contact the Divisional Office for more details of the activities of the N.S.W. Division of the W.I.A.

FEDERAL NEWS

Voice Repeater for MIR Space Station

An upgrade planned for the Russian MIR space station, a popular platform for amateur radio in space activities, should see a 2 m to 70 cm FM voice repeater operational within the next two years, according to a report from 12th Annual Meeting and Space Symposium of the Radio Amateur Satellite Corporation (AMSAT-NA). Held in Florida, USA, in early October, the symposium marked the 25th anniversary of AMSAT.

Other developments outlined at the Florida meeting covered progress on planning for the "Phase 3D" satellite. Due for launch in mid-1996, Phase 3D will be the largest, and most complex amateur satellite ever assembled. Among the array of ground-to-satellite (uplink) channels planned is one in the 21 MHz (15 m) HF band. Others will be in the various VHF, UHF and microwave bands. Assembly of the Phase 3D satellite is proceeding on schedule, it was reported. It will be

about 2.1 metres in diameter. Meanwhile, it seems the popular OSCAR 13, on which many amateurs "cut their teeth" in amateur space communications, is fated for a fiery death in early December when it is scheduled to re-enter the atmosphere. Thanks to the ARRL Newsletter for details.

WICEN News

This will be the last WICEN news bulletin for the year, and they will start again next year, on Sunday 8th January, when the Broadcast recommences. The Sydney WICEN net will also go into recess during that time, possibly in common with other nets, but the WICEN repeaters will continue to be monitored. In the mean-time, why not write a letter to the media, informing them how WICEN provided the only communications during the Cyclone Tracy and the Newcastle Earthquake disasters, the anniversaries of which are this month? Members are warned to keep their communi-cations equipment in working order, in preparation for an unpre-dictable call-out. Finally, the Dural Engineer, who is an active WICEN member, will personally ensure that these facilities will remain operational during the bush-fire season; members will re-call that the Council of the day, for reasons of their own, closed down the Dural station during the height of last year's fires, despite the fact that Dural is an official WICEN command post.

The Hunter region has a meeting tomorrow, at the Emergency Opera-tions Centre, corner of Elizabeth and Hannel Sts, Carrington, commencing at 7pm; please contact Pauline VK2GTB for further de-tails.

Those who are planning for next year should note the RTA NSW Bike Ride over the 4-11th March, the Bungonia Cave Rescue exercise on the weekend of 18-19th March, the Oberon Car Rally on 29th April, the Goulburn Training Seminar on the weekend of 13-14th May, the Hawkesbury Classic Paddle on the weekend of 14-15th October, and JOTA on the weekend of 21st-22nd October.

On behalf of the WICEN (NSW) Management Committee, we would like to wish all personnel a safe and happy holiday period.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

NEWS BRIEFS

The usual function of this section of the broadcast is to bring news from the mainstream memdia to Radio Amateurs; at this time of year, however, it might be worth bringing Amateur Radio back to the mainstream media. As mentioned in the WICEN News segment, Christmas week sees the anniversary of two major natural disasters where Amateur Radio played a vital role in serving the community, namly Cyclone Tracy and the Newcastle earthquake. This would be a good time to write to your local and regional newspapers, to remind them

of the role Amateur Radio played during those difficult times.

So, why not put pen to paper and gain some valuable publicity for Amateur Radio? It need take only a few minutes of your time and the cost of a stamp ... isn't continued support for your hobby worth it?

******

2NCR makes the Internet simple. Listners in the Lismore area might be interested in a new radio programme that explains the Internet in terms an ordinary human can understand. 2NCR-FM, broadcasting from the Southern Cross University on 92.9 MHz has begun a radio programme on Sunday afternoons from 3pm to 6pm local time, called "The Internet Cruise". The programme aims to demystify this "Information Superhighway" we've been hearing so much about.

*****

Santa Claus gets spammed. It was bound to happen ... Santa Claus put in an appearance on the Internet, and for his trouble he got "spammed". "Spamming" is the Internet term for flooding the network with the electronic equivalent of junk mail.

A company called "Schloss Christmas Cheer" broadcast a message to Internet subscribers last week, romising to donate 10 cents each time someone sent them electronic mail to inquire about one of the charities the company was supporting.

Alas, many people misunderstood the message, and thought that the company would make the donation for each electronic message sent to their address. As a result, users around the world put the company on the "Cc:" list for every message to anyone, flooding "Santa's" electronic mailbox, at a rate of hundreds of messages every hour. "Santa" woke up one morning to find no less than 42,000 messages waiting.

For those interested, "Santa's" Internet address is santa@north.pole.org, but we think his mailbag is plenty full, and listeners who wish to remain on his "nice" list are advised not to send him any more email.

"News briefs" looks at communications news items that appear in the mainstream media. Thanks this week go to "The Australian" and "The Sydney Morning Herald". If your local or regional paper runs an item of interest to Radio Amateurs, why not send a clipping to the Divisional office?

--Ruchard Murnane VK2SKY

Carbon supercapacitors

Capacitors currently used as electronic components in computers. televisions, etc., have relatively low capacitance but recent advances, resulting in greater capacitance (1-10 Farads), allow them

to be used in energy storage for low energy demand situations. Further capacitance increases to 100-1000 Farads give them the potential for storing energy in a form superior in many ways to conventional batteries.

Capacitors have a number of advantages over conventional batteries:
* they can be charged and discharged almost indefinitely and have superior charging characteristics, a much longer life amd more rapid recharge rates,
* they can provide hogh discharge currents not easily achieved by batteries,
* They require no maintenance and are therefore more suitable for use in remote locations, and
* they can be fabricated from non-toxic and relatively inexpensive materials - one such material is carbon.

Electric double layer capacitors (EDLCs) utilise the separation of charge that occurs when an elctrolyte contacts a conductor. In carbon EDLCs, carbon acts as the electrodes and the electrolyte is typically an aqueous acid or salt solution, or an organic electrolyte. When a voltage is impressed across a pair of carbon electrodes, charge migration occurs in both the carbon electrodes and the electrolyte. Carbon is the material of choice in EDLCs because of the extremely high surface area that is obtainable after treatment - up to 2000 square metres per gram.

The scientific challenge is to produce a quality carbon that combines high surface area with low resistivity. Dr. Tony Vassilic who heads the CSIRO team explains that although surface area is important, it is not the overriding criterion for high capacitance; pore size distribution, electrical conductivity and particle size need to be optimised. In addition the elctrloyte must have a high conductivity and breakdown voltage.

"Initially we will be basing our products on current carbon EDLC technology and our own knowledge of this area but, built into the program will be research to identify and prepare better construction methods", he says.

The importance of this approach is confirmed by Plessey Components, the industrial partner in this research, and Australia's largest manufacturer of capacitors. Plessey's managing director, Mr. Anthony Kohgats, says, "There is a limited time-frame available and we must run research and engineering development projects concurrently to get marketable components up and running as soon as possible. Our aim is to market, over three years, a number of capacitors of increasing perormance, each manufactured for a specific application area."

These application areas could include capacitors as back-up for computers, as energy storage devices for photovoltaic cells and as secondary energy storage for electric vehicles.

"We see this as a major growth technology and one which could provide Australia with an opportunity for significant high value exports".

Item fom Dr. J.K. Wright VK3EXV. Chief, Coal and Energy Technology Division of CSIRO.

IPS WEEKLY REPORT
---
09 NOVEMBER - 15 DECEMBER

DATE OF ISSUE: 16 DECEMBER 1994

INDICES:
DATE 09 10 11 12 13 14 15
10CM 87 86 95 99 97 95 93
A 11 8 10 10 13 7 (17 ESTIMATED)
T 18 30 27 41 52 6 8

SOLAR ACTIVITY WAS VERY LOW 9TH-12TH, AND 15TH DECEMBER, LOW ON 13TH, AND MODERATE ON 14TH. THERE WAS AN M2 FLARE ON 14TH, AND A SHORT WAVE FADEOUT WAS NOTED IN ASSOCIATION WITH THIS FLARE FROM 0540-0550 UT.

THE GEOMAGNETIC FIELD AT LEARMONTH WAS QUIET ON 10TH DECEMBER, AND QUIET TO UNSETTLED FOR THE REMAINDER OF THE PERIOD UNTIL 12 UT ON 15TH WHEN THE FIELD BECAME UNSETTLED TO ACTIVE FOLLOWING THE START OF ACTIVITY FORECAST FOR 16TH-17TH DECEMBER.

IONOSPHERIC F2 CRITICAL FREQUENCIES AT SYDNEY WERE NEAR PRE-DICTED TO SLIGHTLY ENHANCED 9TH-11TH, ENHANCED BY UP TO 15 PER CENT 12TH-13TH, RETURNING TO NEAR PREDICTED MONTHLY VALUES TO THE END OF THE PERIOD. OCCASIONAL SPORADIC E WAS REPORTED FROM CAMDEN, TOWNSVILLE AND HOBART ON 9TH, AGAIN FROM CAMDEN AND HOBART ON 10TH-11TH DECEMBER. SYDNEY EXPERIENCED SPORADIC E LAYER BLANKETING AT INTERVALS ON 14TH.

FORECAST (16 DECEMBER - 22 DECEMBER)

SOLAR: LOW TO VERY LOW

GEOMAGNETIC: UNSETTLED TO ACTIVE 16 DEC, MOSTLY ACTIVE WITH BRIEF PERIODS OF MINOR STORM LEVELS 17 DEC AND QUIET TO UNSETTLED THEREAFTER.

IONOSPHERIC: OCCASIONAL DEPRESSIONS OF 10-20 PER CENT 16-17 DEC AND NEAR PREDICTED MONTHLY VALUES FOR THE REST OF THE WEEK.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

CLUB NEWS: AATC

The next of the A.A.T.C. Inc. will be a combined committee meeting and minor general meeting next year 1995 - January 29th on a Sunday 1.00 pm at RCS Radio Bexley.

The purpose of this unusual procedure is so the Technical committee can assess from the members attending as to what the AATC will have on display at the Wyong Field Day. - a practice run you might say.

So please be here with your intended items for display to be logged on Sunday the 29th of January at 1.00pm - locstat - RCS Bexley.

The end of the year is nigh and thanks go to the WIA for the Sunday news broadcasts and for all to have a quite sobering Christmas break.

For more information about the A.A.T.C. listen to the net on Tuesday nights from the Liverpool area on 146.625 MHz - approx 19.30 hrs - or watch us on 1250 MHz from our Oakdale repeater anytime.

Also you can ring the Publicity Officer on (02) 587-3491 any time.

Remember the Wyong Field Day is only 10 weeks away - see us there!

AATC Inc. Publicity Officer Bob Barnes

CLUB NEWS: WAVERLEY

Waverley Amateur Radio Society

The Society's next meeting will be held on Wednesday 21st December at 7:30 p.m. in the Society's new premises located in the Rose Bay Scout Hall in Vickery Avenue, Rose Bay, next door to the Rose Bay R.S.L. Club. Doors open at 7:00 p.m.

The main topic for the evening will be an introduction to Amateur TV by Dave Pack of the Australian Amateur TV Club. Visitors are most welcome.

Refurbishing of the new premises has come on apace thanks to the efforts of a number of members, so come ans see the results. Now having permanent premises, the Society is planning to expand its program of activities next year into the operating, equipment construction and morse training fields.

In February the Society celebrates the 76th anniversary of its foundation in 1919, and is planning a special event to mark the occasion. In the menatime the Society will try to contact past members and trace historical records relating to its early activities. If you can help, drop a line to

VK2BV, P.O. Box 130, Watson's Bay, NSW 2030

Simon Buxton - VK2EII - Publicity Officer

ANARTS

HOLIDAY DATES FOR ANARTS BROADCASTS

THE ANARTS RTTY BROADCAST WILL GO INTO RECESS AFTER 18TH
DECEMBER AND RESUME ON 15TH JANUARY 1995.

THANKS TO ALL OUR LISTENERS OVER THE PAST YEAR AND WE WISH YOU
ALL THE COMPLIMENTS OF THE SEASON, AND MAY THE CHRISTMAS GIFTS
BE JUST WHAT YOU DESIRE.

MERRY CHRISTMAS, FROM PAT VK2JPA ANARTS BROADCAST OFFICER

Coming events

Now, a summary of upcoming events of interest to members and
other Radio Amateurs ...

Last VK2WI broadcast for 1994 . . . . . .TODAY
Last ANARTS RTTY broadcast for 1994. . . . . .TODAY
Fishers Ghost Amateur Radio Club meeting & BBQ . . . . Wednesday
Waverley Amateur Radio Club meeting. . . . . .Friday (?)
Divisional office closes for Christmas . . . . . next Sunday
Christmas Day (no broadcast) . . . . . next Sunday
20th Anniversary of Cyclone Tracy. . . . . next Sunday
5th Anniversary of Newcastle Earthquake. . . . . 28 December

1995
New Years Day (no broadcast) . . . . . 1 January
First VK2WI broadcast for 1995 . . . . . 8 January

(Divisional office closed during January, phone will be redi-
ected to duty Councillor)

ANARTS broadcasts resume . . . . . .15 January
First live ATV transmission of 1995 from Gladesville .18 January
Divisional Council meeting . . . . . .20 January

Do you have an event you'd like publicised on the weekly broad-
cast? If so, then please send details to the Divisional Broadcast
Officer, Michael Corbin VK2PFQ, by phone on (02) 626-9288, or by
fax on (02) 626-6066.Items can also be forwarded to the Divisional
Office.

STOLEN
------
```

THE OTHER DAY WHILE LOOKING IN MY MIRROR I NOTICED SOMEONE HAD STOLEN MY REFLECTION AND REPLACED IT WITH THAT OF AN AGEING HIPPY.

ADMITTEDLY HE BEARS SOME RESEMBLANCE TO ME , BUT WHEREAS MY HAIR IS BROWN AND CURLY, HIS IS THINNING TO BALD , GREY AND FRIZZY. I'M SLIM AND LIVELY. HE HAS A BULGING BELLY AND LOOKS OLD AND TIRED. MY CLOTHES ARE THE LATEST THING, UP TO DATE AND MODERN, THE MAN I GLIMPSE IN SHOP WINDOWS WEARS OLD FASHIONED CLOTHES THAT ARE RUMPLED.

IT DOESNT REALLY WORRY ME BUT IT WOULD BE NICE TO SEE MY REAL SELF NOW AND THEN, SO IF ANY ONE TRIES TO SELL YOU A REFLECTION GOING CHEAP PLEASE LET ME KNOW, ITS THE WELL KNOWN XYZ BRAND AND THE SERIAL NR IS UR-KIDIN-123.

MERRY CHRISTMAS TO ALL FROM COL VK2CTD...

---

ARRL RTTY Roundup Contest 7-8 January 1995 (part 2)
---
QSO points- Count one point for each completed QSO (anyone can work anyone). A station may be worked once per band for QSO credit, but not for additional multipliers.

Multipliers- Count only once (not once per band), each U.S. state (except KH6 and KL7), each VE province (plus VE8 and VY1) and each DXCC country. KH6 and KL7 count only as separate DXCC countries. The U.S. and Canada do not count as DXCC countries.

Canadian multipliers
Prefix ... Province Prefix ... Province
VO1/VO2 NFLD/LAB VE4 MB
VE1 NB VE5 SK
VE1 NS VE6 AB
VE1/VY2 PEI VE7 BC
VE2 PQ VE8 NWT
VE3 ON VY1 YUKON

Final score- Total number of QSOs times total multipliers.

Awards- Certificates will be awarded to- Top scoring low power and high power single operators and multi-op scorers in each ARRL/Canadian section; Top low power and high power single operators and multi-op scorers in each DXCC country (other than W/VE).

Logs and summary- Logs should contain the suggested standard format- BAND, MODE, DATE/TIME, on/off times, callsign, exchange sent/received, multipliers (marked the first time worked). Entries with more than 200 QSOs must submit duplicate check sheets (an alphabetical listing of stations worked). A Summary Sheet must show- claimed score tally, class of operation, your

call, name and address. Multi-ops stations please include names and callsigns of all operators.

Deadline- Entries must be postmarked no later than 30 days after the end of the contest (February 8, 1995). Mail entry to-
ARRL RTTY ROUNDUP
225 Main Street
Newington, CT 06111
Recommended operating frequencies (MHz)-

3.580 to 3.620 14.070 to 14.095
7.040 -- RTTY DX 21.070 to 21.090
7.080 to 7.100 28.070 to 28.150
Happy hunting.

THE OHIO/PENN DX PACKETCLUSTER
DECEMBER 5, 1994

EDITOR TEDD MIRGLIOTTA, KB8NW
PROVIDED BY BARF-80 BBS CLEVELAND, OHIO

THANKS TO THE NORTHERN OHIO AMATEUR RADIO SOCIETY, NORTHERN OHIO DX ASSOCIATION, OHIO/PENN PACKETCLUSTER NETWORK, AD1C, KC1QF, W4/YV5DTA, WA4WTG, K8PXG, K8YSE, WD8NSD, DL7VEE 7DXNL, DL7VTM, G3NYY AND JH2PDS/1 FOR THE FOLLOWING DX INFORMATION.

3V, TUNISIA. REPORTS FROM JAPAN STATE THAT KARL, DK2WV, WOULD BE VISITING 3V-LAND THIS MONTH. IT ALSO MENTIONED THAT HE IS NOT SURE IF HE WILL BE ABLE TO OPERATE ON THE AIR, BUT HE HOPES TO BE ACTIVE. KARL HAS OPERATED BEFORE FROM 3V IN THE SUMMER OF 1993 AS 3V8W. MEANWHILE, 3V8BB CONTINUES TO BE ACTIVE. ACTIVITY WAS REPORTED ON/OR AROUND 7005 KHZ BETWEEN 2300 AND 0230Z, 14022 KHZ AT 1530Z WORKING EUROPE AND 21290 KHZ BETWEEN

1400 AND 1500Z.

9G, GHANA. THE DX NEWS LETTER REPORTS THAT PA3ERA AND PA3FUE PLAN TO OPERATE FROM DORMAA HOSPITAL AS 9G1AA BETWEEN JANUARY 17 AND 31, 1995. MEANWHILE, 9G5SX HAS BEEN HEARD ON 1829 KHZ BETWEEN 0030 AND 0200Z.

A6, U.A.E. DON, WB2DND, REPORTS THAT A61AH, A61AI AND A61AN ARE THREE LICENSED OPERATORS FROM A6-LAND. NASR FEKRI, A61AN, HAS BEEN HEARD LAST WEEKEND ON 14262 KHZ AROUND 1415Z. QSL TO P.O. BOX 53656 DUBAI, UAE. SO FAR THERE HAVE NOT BEEN ANY REPORTS ON A61AI AS OF YET. ALMUR ALMOHIRI, A61AH, HAS BEEN HEARD AROUND 3792 KHZ AT 0020Z. QSL TO P.O. BOX 4800, DUBAI. DON, WB2DND, HAS ALSO REPORTED THAT HE HAS COPIES OF THE A61AH A61AN LICENSES AND WILL FORWARD THEM TO THE DXCC DESK FOR THEIR FILES.

CHANGE OF PLANS. IT WAS REPORTED LAST WEEK, TOM, DL7UTM, WAS GOING TO BE ACTIVE FROM THE MALDIVE ISLANDS DURING THE HOLIDAYS. THIS HAS CHANGED. TOM HAS PUSHED BACK HIS 8Q7XO OPERATION UNTIL POSSIBLY MARCH/APRIL OF 1995.

FK, NEW CALEDONIA. A JA GROUP WILL BE ON THE AIR UNTIL DECEMBER 19TH. LOOK FOR JM1WBB, JN1BSH, JO1SIT, JP1IHT AND 7K1WLE SIGNING FK/CALLSIGN (THEY ARE TRYING TO RECEIVE FK CALLS) ON ALL BANDS. QSL VIA 7K1WLE, HISATO KOBAYASHI, 2-7-19 MEJIRODAI HACHIOJI-CITY TOKYO, JAPAN.

FR, REUNION. FR5DX WAS HEARD OVER THE WEEKEND WORKING 40 METERS SSB. CHECK BETWEEN 7050 AND 7055 KHZ LISTENING 7170-7180 KHZ AT 0300Z. FR5DD WAS HEARD ON 14026 KHZ AROUND 1330Z.

FR/G, GLORIOSO ISLANDS. HENRI, FR5ZQ, IS NOW SIGNING FR5ZQ/G AND IS EXPECTED TO BE THERE THROUGH THE END OF THE YEAR. HE HAS BEEN HEARD ON 21260 KHZ (LIST OPERATION) AROUND 1630Z. QSL VIA CBA.

PIRATE REPORTED. JAMES, 9V1YC, IN SINGAPORE REPORTS THAT A STATION OPERATING AS 9V/SV2BBJ, GIVING HIS NAME AS NICK, AND STATING TO QSL TO HIS HOME CALL, IS AN UNLICENSED AND AN UNAUTHORISED OPERATOR.

SY, MOUNT ATHOS. PETER, KC1QF, STATES HE PLANS TO BE IN MT. ATHOS NEXT SUMMER. HE PLANS TO OPERATE ON HF BANDS ALONG WITH RTTY/PACKET. HE WILL BE GOING TO GREECE THIS CHRISTMAS TO ARRANGE THINGS.

T31, CENTRAL KIRIBATI. IT WAS REPORTED THAT NORBERT, DF6FK, WOULD BE ACTIVE AS T31BB, FROM DECEMBER 14-21TH.

T32, EASTERN KIRIBATI. SEVERAL JA OPERATORS WILL BE HEADING UP A BIG OPERATION FROM HERE BETWEEN DECEMBER 27TH AND JANUARY 2, 1995. LOOK FOR T32J (JR5JAQ), T32A (JA5EXW), T32Q (JR4QZH),

T32X (JA4GXS) AND T32O (YL JF4LNO) TO BE ACTIVE ON 160-6
METERS, CW/SSB/RTTY AND POSSIBLY ON THE SATELLITES. QSL VIA
HOMECALL.

# 4525. Re: Canada: Automatic-reciprocity ???

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-19 23:52:46 UTC
From: mark@ve6mgs.ampr.org
Message-ID: <1994Dec19.235246.6802@ve6mgs.ampr.org>
Source record: 254719
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

jcumming@dgim.doc.ca (Jim Cummings) writes:

>"portable" followed by the Canadian callsign area that your are located
>in, i.e., if you are in Ontario you would say "AA9IF portable VE3".

`portable' implies a station that is set up for a temporary purpose. This is close, but `mobile' at times will be more descriptive of the typical vacationer setup. A portable station usually implies a temporary antenna strung up in a tree, and a battery powered HF rig. A station set up in a tent in the middle of a park, or some similar arrangement.

No, `portable' is *not* a handheld, despite how natural one might think the term to be in the purpose ... There is a clear delineation of what is a `base', a `portable' and a `mobile' in the regulations.

Ciao -- Mark

# 4526. BOATANCHORS elist has moved to a new host

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-19 23:54:53 UTC
From: ab4el@cybernetics.net
Message-ID: <3d56gd$kh1@jabba.cybernetics.net>
Source record: 254717
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna,rec.radio.amateur.homebrew,rec.radio.amateur.digital.misc,rec.antiques.radio+phono,sci.electronics

NOTE: The BOATANCHORS elist moved to a new host. Below is the greetings
sent this weekend to current subscribers. If joining the BOATANCHORS
list is of interest to you, you ought to read the greetings.

In a subsequent message, I will broadcast the procedure for subscribing--
now that it can be handled entirely by email to the list management
program running on ThePorch.com.

--de Steve AB4EL ab4el@Cybernetics.NET in Raleigh, NC
----------------Cut Here----------------

BOATANCHORS CHANGEOVER RELAY GOES "KER-CHUNK"!!!
-----------------------------------------
Greetings and welcome to the new and improved (but still vintage)
"boatanchors" mailing list. An automated list manager should help things
run more smoothly for everyone while still providing the same
outstanding signal-to-noise ratio we have enjoyed since the list's
beginning.

Jack Hill W4PPT has agreed to provide a new home for the list, with the
blessings of Paul Prescott N1AAC who took over from Our Esteemed Founder
Jim Lockwood KM6NK.

NOTE - You need not re-subscribe or take any special action other than
noting the new addresses listed below. The subscription list was moved
intact from the old mit.edu site and you are already on it if you got
this message.

Subscribers of the satellite list on boatanchors@beacons.cts.com will
also be moved to this new address.

The new mailing list address is now

boatanchors@ThePorch.com.

Use this now for messages of general interest to the entire group
Please don't use it to subscribe, change address, etc.

The new automated list manager address is

ListProc@ThePorch.com

Use this for subscribing, unsubscribing, getting archived info,
getting the FAQ message, changing your address, etc.
Now send a message to ListProc@ThePorch.com with just
HELP in the body to get info on how to do this.

The new list owner address is

ListOwn@jackatak.ThePorch.com

Use this address only when there is a problem which really
truly can't be resolved otherwise.

Now, yes right now, save this message so you'll have these addresses
handy. Whew, thanks - doesn't that feel better?

You will also soon receive a copy of the "Welcome" message that will be sent
to all new subscribers. It includes more useful info on things like the
purpose of the list, how to subscribe/unsubscribe, etc. It would be a
good idea if you save it along with this message for future reference
or to pass on to interested parties. Thanks.

The transition team has included long-time boatanchorites and folks who
have been helping keep "boatanchors" alive over the last couple of years.

We have tested this program on a variety of mail programs, but we know that
it is possible some behavior may be different (particularly in how you reply
to just an individual or to the entire list). There seems to be no way to
satisfy all possible e-mail software! Just relax, keep your eyes open, and
adjust your habits accordingly.

We hope that we'll all now have a stable, reliable, and useful list with
a minimum of disruption. Enjoy.

Happy Holidays and 73 from the transition team.

Speaking from experience (I'm a HAM and a pilot) you are not allowed to have receiving (or especially transmitting) devices in the passenger compartment of any airliner, that is to say any equipment that is switched on. This includes palm size TV's, AM and FM radios and in some cases lap-top computers!

I caution you, you may even have some trouble getting the hand-held radio through the security gate, I have had to almost completely dismantle my radio for the security people in order for them to let me on-board with it. My suggestion to you, leave it in your suit case and save the hassle, those security people can even take your radio away from you if you insist on getting on the plane when they decide you can't board with the radio! They have that authority, and as a flyer myself, I'm glad they do!

The reason they cite for not allowing these kinds of devices on board is that even though they are not transmitting, in the on position they emit tiny amounts of RF which could alter very sensitive navigational equipment on the aircraft. I assume that there is a tiny amount of truth to that but honestly believe that the "smuggling of an explosive device" plays a bigger role in that decision, you be the judge..

Good luck and happy landings!
>

FYI:

Most airliners allow you to use laptop computers after takeoff. I use mine all the time when traveling.

I would not recommend placing a radio in a 'checked' bag. Alot of things seem to disappear and the
airline will only pay up to $1250. They do not cover electronics, cameras, or jewelery.

Recently, I passed my tech exam. I took it with a friend<sorta> that did not pass. Anyway, he plans to go on the air anyway. He said he'd just make up a call sign. I suggested he not. He says nobody monitors for such things or would know anyway. Is he right? Could he run illegal without reprecutions? Does this happen often? Can I turn him in, or am I makeing to much a deal out of it?

Gee, all the flights I've been on in about the past two years prohibit any
radio receivers OR transmitters during the flight. Only things like
computers, tape players and CD players are allowed, and then not during
takeoff and landing. The pre-flight safety presentation (that nobody
listens to anymore?? ;-) has been quite clear about this.

>out there with an opinion on this subject?

Where cellphones work, they're great, but expensive. And, they don't
work in the darndest places - I was on top of an 8,000 ft mountain, looking
at the antenna for a cell site that was less than 5 miles away, and I was
out of range (probably outside the aperture of the antenna, I was above it).

2 mtr ham radios are fun and generally usefull. But, they also depend on
repeater sites. Many locations are covered by repeaters, many more are not.
2 mtr works so-so in the woods, or in canyons, at distances of 50 miles
or so.

For 1200 mile range, welcome to the exciting world of HF/SSB communication
with a big radio, a big power supply, and a big antenna.

Cost is about $400 for a pretty decent 2 meter handheld, more if you want
dual band (for real techs or better, the way to go), and a bit more for
extras (spare hi-cap quick charge battery, speaker-mic, case, disposable
batter (aa size) batery case, external vehicle antenna). Figure a kilobuck
plus for a HF rig of any stature.

To quote the rec.guns moderator out of context, "buy them all".

Clark is absolutely correct, airlines will not allow you to operate (this means receiving or transmitting) ham radio gear. But strangely enough, they will allow the use of walkman radios (tape AND radio components) on the plane.

I know it sounds goofey, but those are the rules.

Subject: ### Looking for Mods/service manual for Standard HT

I'm looking for mods for Standard HTs, the C1xx models. I've seen mods
around for C5xx and above, but don't seem to find any for the 'simplier'
models.

Preferably, for the C150. It's very similar to the C158A, but this unit has
no out of band rec (I believe it's only 144-148 or something like that).
Or a service manual for this model.

Would appericiate pointers, ftp sites, etc. Please reply via email.

Thanks.

A similar discussion has been going on in comp.dcom.telecom.tech.
Several people mentioned that many small (rural?) cellular providers
will offer "roam-only" service to attract out-of-area customers.

Here's part of an article on the subject. Service is $36/year,
but calls are $3.50/minute. In an emergency, though, that's not too
bad.

From: rdcole@crl.com (Ron Cole)
Subject: 2-meter HAM vs. Cellular

Go for the Ham ticket. The 2M HT will operate direct or through a
repeater. The Cell phone must have a Cell Basestation to operate. Cell
phones are expensive. from $20 to $100 / month plus air time. and
roaming fees! generaly a $20 admin fee + $1 per day which really adds
up. There are areas of the country that cell phones jsut don't work buth
they are getting smaller.

A couple of 2m HT's on direct can give you several miles range and it
only takes no-code tech licenses to operate them. with no Time charges.

: Let's wake-up the author of this article and the newspapers
: that published it, shall we?? Can you all help me with this??

As a matter of fact, ARRL HQ staff has had a number of opportunities to work with newspapers and other news types on this issue. I recently had a chance to spend about an hour with an AP reporter, who ended up writing a balanced article on the subject. Many times, it is best if HQ doesn't get involved with the letters to the editor on these issues, especially if local hams are already involved in a response. However, I *believe* that this is the article I talked over with Steve Mansfield (our PR Manager) just last week. If so, he is working on a reply as a letter to the editor.

Nonetheless, it is still important that local hams get involved in this, too. Although a few hams are less than diplomatic when faced with an RFI problem, most are willing to help a neighbor resolve an EMI problem regardless of fault.

ARRL HQ has prepared a pamphlet about EMI designed for the neighbor of a ham. It explains EMI in relatively non-technical terms and presents a fair and balanced view of responsibilities. A copy is available for an SASE from the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111.

>jerry
>N3RKD

Jerry,

Couple of things, mate.

Number one: good for you to make all your to date HF contacts in CW! Keep
going!

Number two: don't worry about not getting QSL cards immediately in
return. I myself am pretty lazy when it comes to that, but I eventually do
get the responses out.

And lastly, number three: it's up to you whether or not you want to include
an SASE with your outgoing cards. I usually don't with the exception of those
rare DX catches. Although others may differ, if I'm going to put out the
money for a stamp, the other station should as well. That's what I'd expect
from other hams who send QSL's to me (and I haven't had a problem buying
stamps), and that's kind of what I expect when (and if I ever do) initiate
QSL's.

Once again, keep going on the CW! I can't preach that enough. And congrats
on getting on the HF bands!

Later.....Rich/WH6NU

From: Paul_M._Butterfield.wbst129@xerox.COM
Subject: More info available on Icom P2AT?

I'm a newcomer to amateur radio. I have recently purchased a very sexy little
Icom 2m HT, the P2AT. As I haven't yet tested, I cannot push that little

button labeled "Push to Transmit." Hence, I have to content myself with learning as much as possible about the others features of the radio.

I am fascinated by Icom's interesting approach to controlling the software of this little rig. Through interactions with ham friends, I have learned that I can enable extended receive (was ~130-178 MHz, now 110-180 MHz), and six-digit frequency entry by holding in a group of buttons while turning on the power. I am curious what other functions a thoughtful Icom has enabled via software. Does anyone point me to the complete list of functions that are programmed into this tiny, but complicated little box?

Please copy me in on any response as I get only a sporadic retransmission of this list.

Regards,
Paul Butterfield

>practiced for sending GIFs and binaries, so I was wondering if PGP

>is okay also.

When you say 'use PGP on messages', you're (IMHO) encompassing -everything-
that PGP is capable of. And one of the very fundemental purporse of PGP is
to provide a secure means of encryption.

Encryption is _not_ allowed on amateur bands, be it you use it on packet, or
voicePGP (Not available yet, but there are other s/w that can encrypt voice
phonecalls and stuff)

Next: What you _CAN_ use PGP for on packet are:

a) Radix-64
A method of encoding, very similar, but slightly more efficent
than UU/XXEncode, and a few other forms of 8bit->7bit encoding
routines.

No key or anything is required, one just needs PGP, and type
PGP <filename> and out pops your file (it's supposed to work
that way, your milage may vary)

Commandline : -a

b) Digital Signatures.
As it says. It's a digital signature. It's aim is to provide
authenticity of the sender, and it's purporse is twofold

a) Someone can't forge anothers post.
b) The poster cannot (really) deny not having posted it.

However, (also IMHO), I would advise you, and anyone else
who plans to use PGP to make use of the 'clearsig' function,
which allows the message text to be read with no processing,
And a digital signature is appended to the rear, which
can be processed if desired.

Commandline: -sat +clearsig=on

The clearsig can be set to default in CONFIG.TXT

IMPORTANT: Under packet, I should say that under no point of time, should
"e" or "c" be on the command line. These are the encryption
functions of the s/w, and encryption is not allowed.

Your milage _WILL_ vary regarding my post. But I do recall a discussion on
this once, where someone (I presume is important) said digital signatures on
packet is ok, as it's purporse is to authenticate the sender, and not to
obscure the message.

Rgds!

: only. Has this changed?

Dave

Are you sure it was Staeside?

US hams are still only allowed to use CW on this band as far as I know.
There are foreign hams whose government allows them to use SSB in this band.

I'm not totaly sure but New Zealand and possibly UK hams have access on
SSB. There are also a lot of (illegal?) use by fishing boats etc.

Ic> --
Ic> 73, Cecil, KG7BK, OOTC (All my own personal fuzzy logic, not Intel's)

Hi Cecil...yes, I should have put some real thought into that one...
100 mH would be more along the lines of an audio component than RF.
I've gone ahead and purchased the 100 uH choke and installed it.

It turns out that this wasn't the only misprint in the drawing of the
Techno-Whizzy article... they've got 2 uf caps for interstage coupling
... I don't thing much RF would be passing thru at several Mhz. and
more.

73 and thanks for the reply... Hugh VE3OYH

PGP is capable of just plain encoding as well. The algroithm used is known
as Radix-64, and is slightly more efficent than UU/XXEncode. You could try
to do some tests or something, the commandline is to just use -a
(Ascii-Armour)

As for PGP Sigs, use the 'clearsig' method, as otherwise, I'm sure others
would take to that as encryption.

Deletia

One of the ideas that has been suggested to me, and I have bought into but not yet tried
out, is a 2m J-pole made from the old flat TV antenna lead. The neat thing about this is,
with a slingshot, a small fishing weight, and some fishing line, you can easily hoist this
antenna to an incredible height in a nearby tree for exceptionally improved TXRX. The
whole package (slignshot, HT, coax etc) shouldn't weigh more than 5 lbs. That's a lot for
my backpack, but for canoeing it shouldnt be much of a problem.

Also, Campmor has a nice solar powered AA battery charger which may be worth
investigating. Place a couple of these babies on the bow and stern of the canoe, and you
would always have fresh batteries. Unless you enjoy ragchewing in the wilderness, which I
don't...

Another idea - take several ziploc bags for all your radio stuff to keep it dry in case of
an accident. My Kenwood TH78A has been through the same class III-IV rapid three times,
and I have yet to come out downstream still in the canoe. I'm not much good, but I have a
lot of fun trying. The Kenwood survived the most recent trip in much better operating
condition than me.

I wish I were going along on your trip. Good luck!

>What is the differnce between packet and a tnc? Are they the same
>different?
>What do I need to get on the DX cluster?

Scott,
Packet is a mode of communication, a tnc is a terminal node controller which is what you need. There are packet only tnc's which may be all you need. A multi-mode controller will get you packet, rtty, ascci, amtor, pactor, and cw. For not a whole lot more money. Some people are going without a "tnc in a box" by useing software in their computer (still need a minimum of hardware about $30.00 worth}. And now some are using the sound blaster compatable sound cards in their PC to decode wfax and other modes. Lots of choises, lots of decisions. Best bet is to visit a local packet club and ask a lot of questions. Hams are friendly and helpful.
Have fun. 73

But Gary...you just confirmed that GPS receivers, *RECEIVERS* being the
key word here...are legal to operate aboard an aircraft. That goes to
contradict your previous statement of "So, you can't legally use a radio
on an airliner." Either that, or else your definition of using a radio
is on the Xmit side.

Help! I need some info about a '50s era transistor radio.
The name is "PERDIO" and it says, "made in England."
The casing is "boxy," metallic in a wood box with pseudo-
leatherette exterior. It is dual band, (MW and LW only) with the
dial indicating coverage only in Metres, not KHz or MHz.
The serial number reads TK 16248. I have not been able
to find any information/manufacturer or listing about the
above.

Would greatly appreciate any info you can find on this
receiver. Thank you.

This is what I'm basing my argument on also, Jerry. Last time I flew on Delta, I went over their PED rules many-a-times, and ruled out what and what not they were talking about. They did make it quite detailed on what was permitted and what was not, however.

It really depends, and there's no quick/cheap/dirty/easy or elegant way
to tell. I was on the mountain ridge north of Big Bear Lake, looking down
on the Lucerne Valley and Eastern Antelope Valley, the cell sites were
below me, and probably had little traffic.

OTOH, I was west of Mammoth one winter, at about 10K, and the cellphone
worked while the commercial VHF-FM (King's) didn't. Of course, the
phone was small enough to carry in my shirt pocket and stayed warm,
but the HT's were hanging in the cold <G>. Made a lot of friends
on that trip.

>: To quote the rec.guns moderator out of context, "buy them all".

>I agree with this. Get both cellphone and 2m HT! In spite of my sour
>treament of cellphones in this post, I really do like the cellular phone,
>and generally carry it when I hike in the sierras.

If you're careful, of course, you won't need either. But, if you're careful
enough to find the repeater freqs AND TONES you can program the local
forest/park/sherriff/etc, and call for help if you need it. It does take
prior planning, not everyone is on a common "mutual aid" freq -
although in California, CLEMARS or my personal fav, Fire-White work
well.

Boy, Are you missing the point!
For the average Amateur CW gives the most bang per watt than any other!
I've made many a QSO on 144 Mhz CW that NEVER would have happened on SSB
or FM. CW is a skill that should be nurtured and coddled till you can
copy 20+ WPM in your head. Once you've improved your skills to this
level you will understand how wrong your comments about "The EVIL CW"
truly are.
Use it, Enjoy it, revel in the fact less than 1% of the population has
the ability. CW exists and will continue to exist because of its
excellent "Weak Signal" characteristics.
CW FOREVER! de Tim - NC7K...

Somehow, it seems unlikely that an HF (as in 10 M) transceiver would be compact and light enough to be practical for backpacking. The 20 M and longer wave transceivers are clearly out of the question. Also, packing a transceiver (and the associated battery supply) that can put out even 10 watts is probably pushing the weight limits. Most of the handheld units that I've seen put out between 3 and 5 watts max. Compare that with 3.25 watts from a mobile type cell phone, or 0.625 watts from one of the subminiature "flip-top" type cell phones.

If you're really concerned about emergency communications and travel to areas out of cell phone coverage, a portable (EPIRB?) satellite based rescue beacon might be the best compromise.

> Ron
> N5HYH

one thing you have to remember is that with a ham radio your group will
be in constant contact with each other. you can join repeaters and get
autopatch for about $20.00 a year or less.

so, in effect, a ham radio is both a two-way radio and a cell type phone.
later in time if you can get the code,(or in a disaster situation)you can
operate on ten meters to reach out farther. with a no-code license you
get six meters that you can use legally.

most ht's will open up and let you scan other freqs.

IN AN EMERGENCY. YOU ARE ALLOWED TO USE POLICE FREQS. AMBULANCE FREQS.
TO SUMMON HELP. THIS IS TOTALLY LEGAL. I HAVE VERIFIED THIS FROM ALL SOURCES.
there is a sub section that allows ham operators to use any freqs to
obtain help in disaster or emergency situations. i know severa;l
people that had to summon the police to the scene when no other type of
communications were available.

so don't worry about no cell site or ham repeater. you can just use
the police freqs to obtain help if stranded. the nation wide police freq is:
155.475mc.

so go and get your ticket. there are ham fests that you can buy
good but used equipment for under 200 dollars and no more fees after that
are required. unless you want to join a repeater for autopatch and other
functions that run $20.00 or less. other functions might be:temp,time,
voice-mail,repeater links, etc...

good luck

kevin

>out there with an opinion on this subject?

I've been looking into this myself and in the process of getting my
no-code tech liscense, and then my general.

I don't think cellular will cover most places in the boony's. 2-meter
is line of site, but covers a lot more than cellular. Mainly because
2-meter is used by boony folks quit a bit. The no-code book I'm reading
states that there is almost no place in the USA where a 2-meter
repeater can't be hit with a handheld ... if your within line-of-site
(AKA no hills).

The best way to go is to get your general liscense and bounce your
signal off the atmosphere so you have access anywhere for sure, and
*much* further (I've heard 100w 1500miles away and have heard of hams
picking up US->ASIA on 10w). There is a ton of traffic on SW and your
are guarenteed there will be dozens of people to talk to if you get
in trouble. Seems 80meter and 20meter get the most traffic.
A HF transmitter costs about $500 minimum.

The kenwood TS-520 was recommended to me.

PS: if you just want to listen in get a Sony 7600G for $150.

: University of Alberta Edmonton, Alberta, Canada T6G 2G7

Hello Jim:

The only qualification for holding an amateur licence (for which a
Canadian call sign is issued) is that the applicant is the holder of an
appropriate certificate. See section 5.1 of the General Radio
Regulations, Part I. All other licences require the individual (or
corporation) to be a Canadian citizen (section 5, the preceding section).
Furthermore, the Radio Operators' Certificate Regulations are silent WRT
citizenship of candiates for sitting an examination for a certificate.

Therfore, with the greatest respect, the information that you have
received from the Edmonton district office is incorrect. There are no
citizenship requirements to hold a Canadian radio licence in the amateur
service. Therefore, local discretion WRT citizenship for this type of
licence is moot.

Yours respectfully
Jim, VE3XJ

This ad for the QRZ! CDROM should probably go in rec.radio.swap.

But to forewarn you about this ripoff...

I replied and got a pleasant offer to buy the Summer 94 issue
of QRZ! for $29.95.

I also sell QRZ! but for $14.95.
So, I will take your order for the January 1995 issue for
$14.95. Buy 2 new ones for less than 1 old one from Information
Plus. Expect delivery late January.

I do have some Summer 94 versions left for $11.95.

Subject: HAM radio on airplane/ answer

I have to disagree with several of your points. They do
not have absolute authority to take things away from you. There

is a short specific list of items that cannot be brought on board
a commercial aircraft. Two way radios are not on that list. Look
at all the cellular phones that come on board, two way radios folks.
They can ask you to demonstrate function as they do with computers
in some airports but they cannot take them away from you. DON"T
PUT ANY ELECTRONICS IN BAGGAGE it will be stolen and you will not
be covered. Read the fine print on you ticket jewelry, electroincs,
furs, money are not covered for loss. As to operating the FARs do not
allow the use of non-Type Accepted radio equipment during IFR flight.
All commercial flight is IFR thus no Ham equipment can be used.
The receiver IF leakage is an old husbands' tale. (like a wives' tale
but more technical) but it is in the rules. Some airlines like Delta
have taken a more reasonable stance with respect to scanners but
transmitters are verboten. I travel many many airline miles each year
taking all sorts of transceivers with me in my hand baggage never had
any trouble in the USA; overseas your mileage may vary.

Speaking from experience (I'm a HAM and a pilot) you are not allowed to
have receiving (or especially transmitting) devices in the passenger
compartment of any airliner, that is to say any equipment that is
switched on. This includes palm size TV's, AM and FM radios and in some
cases lap-top computers!

I caution you, you may even have some trouble getting the hand-held radio
through the security gate, I have had to almost completely dismantle my
radio for the security people in order for them to let me on-board with
it. My suggestion to you, leave it in your suit case and save the
hassle, those security people can even take your radio away from you if
you insist on getting on the plane when they decide you can't board with
the radio! They have that authority, and as a flyer myself, I'm glad
they do!

The reason they cite for not allowing these kinds of devices on board is
that even though they are not transmitting, in the on position they emit
tiny amounts of RF which could alter very sensitive navigational
equipment on the aircraft. I assume that there is a tiny amount of truth
to that but honestly believe that the "smuggling of an explosive device"
plays a bigger role in that decision, you be the judge..

Good luck and happy landings!
>
> --

> arbee@teleport.COM
>
>

FYI:

Most airliners allow you to use laptop computers after takeoff. I use mine all the time when traveling.

I would not recommend placing a radio in a 'checked' bag. Alot of things seem to disappear and the
airline will only pay up to $1250. They do not cover electronics, cameras, or jewelery.

Except during take off and landing (they make a general announcement
these days about electronic gadgets) you can "listen" all you want to
what ever you want. Transmitting at any time on a comercial airliner is
strictly forbidden. As a matter of common courtesy use an ear pice to
listen with so as not to disturb others around you.

Have a nice flight.

Gee, all the flights I've been on in about the past two years prohibit any
radio receivers OR transmitters during the flight. Only things like
computers, tape players and CD players are allowed, and then not during
takeoff and landing. The pre-flight safety presentation (that nobody
listens to anymore?? ;-) has been quite clear about this.

Date: Sun, 18 Dec 1994 00:31:02 GMT
From: keating@nosc.mil (Roger Keating)
Subject: Jan95 VHF Contest Rover Schedule for KD6EFQ/R (+N7TTO)

For unlimited distribution and publication within southwestern USA:

News/Info Bulletin

A.R.S. KD6EFQ Date: Sat. 17 Dec
1994
PO Box 83221
San Diego CA 92138-3221

January ARRL VHF Contest, SW Division Rover Station Operation Plans
KD6EFQ/R (+N7TTO)

Jim Kauffman - N7TTO, & Roger Keating - KD6EFQ, are planning on taking
their VHF rover station across most of Southern Arizona and back into
Southern California for the January 95 ARRL VHF QSO Party. They intend
to rove from east to west along the I-10 corridor to Blythe and then
south along the Colorado River, and then west to San Diego DM12. The
exact route may vary, but they'll attempt to put all the Southern AZ
grids on for at least a short time on Saturday, January 21st.

If you've operated a rover station over many grids, you realize that a
precise schedule isn't practical, yet without some sort of plan, many
QSOs are accidents. We are publishing this tentative projected

schedule with the following caveats: we can't control the wx, and we are doing this for fun, so if the wx is severe someplace along the way, we won't stay long. Operating activity will help determine how long we stay at a location, and how long we work any particular band. Usually, we'll make contact on 2m and then coordinate with stations to meet us on the other bands. If we can't make contact at a particular location, we'll move on quickly. We almost never get ahead of schedule. :)

We'll be trying a prototype model of a new antenna by Gene Swiech, WB9COY: a 3 elem. aluminum beam designed for portable 6m use. If 6m opens, we'll abandon our schedule and have fun with the DX! For prompt QSL response, please include SASE.

For more information, please contact Roger, KD6EFQ
via email at <keating@nosc.mil> or Jim, N7TTO, at <jkauffmn@netcom.com>.

US Mail: KD6EFQ, PO Box 83221, San Diego CA 92138-3221
telefax: (619) 553-3650 phone: (619) 553-3662

We hope to work your station several times that weekend.
As a rover, we get and give new QSO points every time we enter a different grid. Drop us email, packet, or mail a card with your station's set-up and location. We'd love to give you a new grid on a band you need.

73
Roger Keating - KD6EFQ & Jim Kauffman - N7TTO

- - - -
Here is a tentative schedule:

MST Saturday, Jan. 21st, all times are MST estimations.
10:00 DM51 NW corner somewhere. We want to put this grid on; no promises!
11:30 DM52 SW corner along I-10 near Wilcox, if we have time.
DM41 mobile along Westbound I-10 into Tucson from Benson/Wilcox area.
12:30 DM42 mobile along I-10 in Tucson. Quick lunch.
14:00 DM41 NW corner somewhere near Sells.
15:00 DM31 NE corner mobile, (Portable antennas up if we can get the permit.)
16:00 DM32 SE corner somewhere.
DM42 mobile headed north through Casa Grande.
19:00 DM43 mobile as we head into Phoenix along I-10.
20:30 DM33 mobile as we head west along I-10
(alternate route via Gila Bend along I-8)
We will likely stop for meal and rest somewhere in DM43/DM33.
23:00 DM23 Quartzsite/Blythe area. (possible alternative route is via Yuma.)

PST Sunday, Jan. 22nd. all times are PST estimations
08:00 DM23 Colorado River area, south of I-10.
10:00 DM22 Glamis area

11:00 DM23 South end of Salton Sea

: Carling) writes:

: Many things depend on the phone in use. I'm sure you've checked out the
: QST article on telephone interference and the FCC ratings of phones. FCC
: found that phones CAN be RFI free if manufacturers WANT. Our SONY
: cordless is more resisitant to interference than anything else in the
: house, for instance. It's probably cheaper to buy the right phone than to
: spen all the money on filters and chokes that may or may not work.

I would *LOVE* to have the model numbers of consumer electronic equipment that is relatively immune to RFI problems. Unfortunately, hams don't usually contact me here to say that they are *not* having a problem with RFI. If anyone has any specific information on what devices work well near amateur installations, please let me know; I will add them to our rather meager files on immune devices.

I will point out one thing, though. The "bullet-proof" phones that are being sold by Pro Distributors and TCE are "plain old telephones." They lack the bells and whistles usually wanted by consumers. It is relatively easy to design a simple telephone to be RFI-proof; it is a lot harder to design EMC into more complex devices. Not to say it can't be done, but it can't be done for $9.95, or for a phone you get for free with a fillup. :-)

It really depends on your situation. If you're a heavy traveler and want coverage anywhere, you're going to be packing a lot of gear. If, however, you follow the advice of the experts in survival, and you've staked out a section of backcountry as your main "turf," then by all means take the time to find out which works best for that terrain, and set yourself up with the lightest gear you can get away with.

In my area, any ridgetop can see at least one cell antenna, and I tested my Motorola flip phone from a mountaintop that was several hundred feet higher than the nearest antenna (2 miles away). It worked great, I was able to phone home and surprise my wife. I felt like ordering a Pizza!

|>
|>For 1200 mile range, welcome to the exciting world of HF/SSB communication
|>with a big radio, a big power supply, and a big antenna.

Not necessarily. Depending upon band and conditions, 1200 miles is either trivial, impossible, or somewhere in between.

|>Cost is about $400 for a pretty decent 2 meter handheld, more if you want
|>dual band (for real techs or better, the way to go), and a bit more for
|>extras (spare hi-cap quick charge battery, speaker-mic, case, disposable
|>batter (aa size) batery case, external vehicle antenna). Figure a kilobuck
|>plus for a HF rig of any stature.

Only if you like Cadillac HT's and brand new mid range HF gear. Used usable HT's start at around $125 and go up (like the guy really needs DTMF paging and 32253235 memories to call in an emergency.) As for HF, a servicable used rig that would get you on HF can be had for $200-500 easily including antenna. There was a post just today for a Kenwoods TS-820 with vertical antenna for $350. That would get you on all the pre-WARC bands with a nice transceiver. Does it have 99 memories, band stacking VFO's, and a computer interface? No, but not everyone needs all the bells and whistles.

Besides, build a QRP HF transceiver and carry it in your pocket! ;-)

|>To quote the rec.guns moderator out of context, "buy them all".

Only if you're rich, pun intended.

Todd
N9MWB

PS Go for the amateur license. It's a lot more phone than paying some large company for the privilege of using their airwaves.

# 4555. Help! Cut wrong jumper in TM-741A.

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-20 07:08:19 UTC
From: d827418@Oz.nthu.edu.tw
Message-ID: <3d5vt3$7q8@Emerald.Oz.nthu.edu.tw>
Source record: 254747

I cut the wrong jumper resistor on my TM-741A when doing
cross-band repeater mods. It is said that the mods requires
removal of a BLUE 0-ohm jumper on the bottom side of the
control board, but the ONLY blue jumper in my TM-741A was on
the 430 MHz unit, and I just cut it. (How foolish I am!)

```
[ ]
[ I <===== the BLUE jumper ]
[ that I cut. ] <=== 430 MHz unit.
[ ]
[ ]
[ ]
----------------------------------------
[ II <===== the correct one ]
[ to be cut. ] <=== control board
[ |--------| ]
[ | IC 2 | ]
[ |--------| ]
[================panel=================]
```

What is the effect when the blue chip resistor is cut?
If I want to recover it, how many ohms a resistor
should I put back? I have no manual in hand, so anyone
who knows the answer, please reply here or E-mail to
d827418@Oz.nthu.edu.tw
Thanks in advance. 73.

well, adam, you better contact that company and tell them that the FCC mandates that they give 911 and emergency calls at no charge. it's in the FCC rules and regs. but people are willing to pay, because they don't even know about the FCC rules and regs. that service provider should be shut down!

When I was up there it was hard even to hear a broadcast station. I think if you want reliable communication from that area you would have to carry a satellite telephone. In any case, if you are going to communicate for help then you had better be able to give your location. I would carry a GPS receiver. In fact, a gps in the boundry waters could sure save a lot of wrong turns! Kind of a high tech soulution that may not fit with that kind of a trip esthetically speaking I suppose!

Subject: 2-meter HAM vs. Cellular

Richard A. De Castro (decastro@netcom.com) wrote:
: walshs@gate.net (Sean Walsh) writes:
: Where cellphones work, they're great, but expensive. And, they don't
: work in the darndest places - I was on top of an 8,000 ft mountain, looking
: at the antenna for a cell site that was less than 5 miles away, and I was
: out of range (probably outside the aperture of the antenna, I was above it).

I have experienced this on mountain tops as well. I have guessed that
the phone hears so many cellsites, it can't resolve a channel for its
own. A cell tower could allocate a channel that's being used 10 cells
away, never a problem for someone on the ground, but up in the air different.

For instance at Half Dome, you can hear high level sites from 3 service
providers, Contel (Fresno), GTE (San Francisco) and AirTouch (Stockton).
How the hell is the phone supposed to figure that out!!!

: To quote the rec.guns moderator out of context, "buy them all".

I agree with this. Get both cellphone and 2m HT! In spite of my sour
treament of cellphones in this post, I really do like the cellular phone,
and generally carry it when I hike in the sierras.

: The best way to go is to get your general liscense and bounce your
: signal off the atmosphere so you have access anywhere for sure, and
: *much* further (I've heard 100w 1500miles away and have heard of hams

: picking up US->ASIA on 10w). There is a ton of traffic on SW and your
: are guarenteed there will be dozens of people to talk to if you get
: in trouble. Seems 80meter and 20meter get the most traffic.
: A HF transmitter costs about $500 minimum.

Somehow, it seems unlikely that an HF (as in 10 M) transceiver would be compact and light enough to be practical for backpacking. The 20 M and longer wave transceivers are clearly out of the question. Also, packing a transceiver (and the associated battery supply) that can put out even 10 watts is probably pushing the weight limits. Most of the handheld units that I've seen put out between 3 and 5 watts max. Compare that with 3.25 watts from a mobile type cell phone, or 0.625 watts from one of the subminiature "flip-top" type cell phones.

If you're really concerned about emergency communications and travel to areas out of cell phone coverage, a portable (EPIRB?) satellite based rescue beacon might be the best compromise.

From: djenkins@jetson.uh.edu (David Jenkins)
Subject: Connecting SWR analyzers and low-pass filters to ladder line fed anten
na

I use ladder line to feed a dipole. I notice that many low-pass filters and SWR analyzers typically are depicted with coax connectors. The transceiver I use has balanced output as well as coax. How would I connect a coax-connector-equipped filter to the transceiver? Would it suffice to create a little pigtail terminated with a coax connector, and just tie one end to the transceiver balanced connection and the other to the filter?. On the feed line side, is there a problem with terminating the feedline with a coax connector?

How would I use a coax connector equipped SWR analyzer in conjunction with the ladder line? Again, if I terminate the ladder line with a coax connector, will that suffice? Any caveats?

Do you know there is a version 6.1 of PaKet ? Still available in
shareware at ftp.une.edu.au in the next directory :

/pub/ham-radio/funet/ham/packet/terminal file is paket61.zip

Hope this information interresting more than one OM !

From: mbegley@crl.com (Mason Begley)
Subject: Yaesu FT530 tech question...

I'm really hoping that someone can help me with this...

I just bought the "Technical Supplement" for the ft530 and it comes with the schematics for the mh-29a2b (that really nice remote microphone for the ft530 and ft51r). This is why I bought the supplement in the first place to find out more about how the mic communicates with the 530. The specs say that the microphone has a data protocol of asynchronus, 9600 baud.

Ok, so that answered my question. But I still don't know the format of the parity and the data bits, etc. And I know not the commands that the microphone sends to the radio to make it change memory channels or scan or anything else.

My idea was to build an interface for the ft530 to connect to my computer via rs-232. And I'm sure that I'm gonna have to use a max232 chip to get the voltages right as far as the 5 volts on the radio with the 12 volts on the computer's rs-232.

Does anyone know where I might get more info on this...I have called yaesu tech line and the guy I talked to told me that the mh-29 doesn't even connect to the 530. (Although I know better). Anyway, thank-you.

It really depends on your situation. If you're a heavy traveler and want coverage anywhere, you're going to be packing a lot of gear. If, however,

you follow the advice of the experts in survival, and you've staked out a section of backcountry as your main "turf," then by all means take the time to find out which works best for that terrain, and set yourself up with the lightest gear you can get away with.

In my area, any ridgetop can see at least one cell antenna, and I tested my Motorola flip phone from a mountaintop that was several hundred feet higher than the nearest antenna (2 miles away). It worked great, I was able to phone home and surprise my wife. I felt like ordering a Pizza!

All the discussion about radios on commercial airplanes lead me to put
my two cents in. First, I fly a lot on commercial airlines (used to have
a private pilot license, but so what) and find that the rules are different
on different airlines. Some specifically list "scanners" as acceptable devices
that can be operated onboard. This suprised me because AM/FM recievers are
prohibited on virtually all flights, including those that allow scanners.
Would
a two meter tranciever listening only be considered a "scanner"?

I do know that I had absolutely no problem carrying my TH22 onboard last
week, going to El Paso. American out and Continental home. Security did
not challange in any way.

The list of acceptable devices is in the Inflight Magazines. Check to see
that scanners are accepted on the particular airline before using one onboard.

: a transceiver (and the associated battery supply) that can put out even
: 10 watts is probably pushing the weight limits. Most of the handheld

Actually, ARRL magazine had a small sidebar article a few months
ago about a Scout Troop who went camping with a Tokyo High Power
10M/40M HANDHELD radio.

In the photo shown it was only as large as a moderately sized handheld.
They used a long wire for an antenna. They charged the battery of
the handheld using a portable solar charging panel while hiking
during the day.

Unfortunately, that radio is not available in the US. You can order
the radio directly from the company in Tokyo.

If anyone is insterested in the details of phone numbers, model
number, or issue of the magazine let me know and I will dig it
up at home. (I think it is about 8" down on the stack on the
floor of my den. :^)

I picked up a copy of Hamcom30 and am going to build the circuit
for decoding. I have come up with a couple of questions:
1. The 100K Ohm resistors, what wattage should i use?
2. I could not find a TL701 op amp but found a TL702, can I use
it instead ( i think it is just a dual Tl701 in 1 chip,
please set me on the stright and narrow if i am out in
left field).

Thanx in advance
joe, n8xct, attempting 1st home built project :)

Well...
1). If your friend can not pass the Technician exam, I would be affraid to allow him to use a toaster, let alone a radio transmitting device. I'd suggest he study a little (especially the parts about Amateur Radio ethics and responsibilities) and take the test again. Keep your fingers crossed that he can change his attitude.
2). Amateur radio operators are generally "self-policing". If your friend makes up a call and talks to anyone (especially on 2 Meters), he _will_ get caught...and very quickly.
3). The fact that you are posting here about this shows (I hope) that you are concerned. But your questions remind me somewhat of the old joke about the guy who wants to buy a Rolls Royce and asks how much it costs..."If you have to ask, you can't afford it!". I hope your future experience in ham radio makes you realize that you should not even have to ask these questions.
4) If he really is your friend...talk to him and explain that he simply should not do this, especially considering how easy the Tech exam is. "Turning him in" is a decision you'll have to make yourself, but he'll get caught whether you do or not. If he really is a friend, you won't have to. Remember that it is illegal for you to knowingly communicate with non-amateur stations, so you too are in jeopardy.

"Boot-leggers" (unlicensed operators) are held in tremendous contempt by amateurs. They are not tolerated.

Greg WB0RTK

>the 430 MHz unit, and I just cut it. (How foolish I am!)

Er... 0 ohms? That's just a jumper... Solder a wire across it,
or it might even be easier to just carefully string a little solder
across the place where the 'resister' was. When doing this, make sure
and check how much room you have.. If it's a very tight space, as it
likely is, the solder glob method will not be a good idea.. If this
is the case, just take a small piece of wire, strip the ends so the
insulation is about the same size as that jumper (prolly 3mm or so?)
and then just enough wire left on the ends to solder to the pads. Then
you should be okay.. 0 ohms isn't really a resister, it's probably
there to fill in a gap, where you would have seen a big ugly jumper wire
years ago..

Try to be more careful, okay? Your radio is your baby.. :)

>out there with an opinion on this subject?

They both have their place, and HF amateur has another place that may
work when the other two fail. The FCC has licensed all the RSAs (Rural
Service Areas) in the US now, and the systems are being built out. That
means that eventually you'll be able to make a cell call from practically
anywhere in the US. It'll take a while for the most empty and remote places
to get coverage, in fact it may never happen with terrestrial cellular for
some places, but then there are the upcoming satellite cellular systems
which will offer global coverage. Of course near metropolitan areas, cell
coverage is near 100% now, and also along nearly all Interstate highways.
If you aren't going to stray too far from urban areas or Interstates,
then cellular is the way to go. Under the proper conditions, you can
access a cellular site from as far as 20 to 50 miles away.

VHF/UHF amateur handheld radios offer another alternative, but have
some drawbacks in the same places where cellular isn't available. That's
because hams are concentrated in or near urban areas and along Interstates
too. So it's unlikely to find a ham to contact on simplex VHF/UHF where
you wouldn't also be able to use cellular phone. Simplex range handheld
to handeld can range from under a mile to 100 miles or more depending on
terrain. The latter range would represent a mountaintop to mountaintop
contact. Repeaters can make things a bit better in some cases since
repeaters often have coverage beyond their immediate service areas,
especially out West where some repeater systems are on really tall
mountains. That may allow routine coverage out to 100 miles or beyond.
But, not all repeaters are monitored 24 hours a day, not all repeaters
have autopatch, and the ones that do may have a closed patch accessable
only by a special code given only to paying members of the repeater club.
Some repeaters are even *closed* which means they try to lock out non-
member access to the basic repeater itself. What this adds up to is that
even if you manage to hit a system, it may do you no good in certain cases,
or at certain times. If you can hit a cellular system, it will be up and

ready to take your call.

Note this doesn't mean handheld VHF/UHF radios are worthless, they're certainly good for keeping in contact with other members of your party who are similarly licensed and equipped, and they *may* allow you to call for emergency help in some situations.

If you are going to really remote places, neither cellular phone nor VHF/UHF handheld amateur radios are likely to do you any good. This is where a HF amateur radio may help. Depending on a number of factors too involved to go into here, you will typically be able to contact *some* amateur *somewhere* in the world at any given time on *some* HF band. Now if you have a medical emergency in Idaho, a contact with a station on Easter Island might not be ideal, but that station may be able to reach some stateside amateur who can call in your emergency situation. That's certainly better than staring at the "No Service" message on your cellular phone, or exhausting your batteries on your handheld VHF/UHF amateur radio calling and getting no response at all.

The important thing is *prior planning*. Find out in advance whether there is cellular service in areas where you intend to go, and find out if there are active monitored repeaters accessable by handheld from the areas you wish to go. If the answers to both those questions are no, then consider a portable HF rig.

I usually carry both a cellphone and a VHF/UHF handheld. Here in North Georgia, I can usually use one or both from most locations, though I may have to scramble around a bit to find a high enough point to make contact with a cell site or a repeater. If I were somewhere in LA (Lower Alabama), I might prefer to take a TenTec Argonaut and enough wire to make a makeshift HF antenna.

As with any other tool, you need a good understanding of how it works, and what its limitations are before trusting it with your health or safety. Whatever you decide to get, *use it* a lot so that you'll understand when and how it will work if an emergency crops up.

Another beauty of ham radio is that the more remote you are, it seems a larger percentage of people are hams. I was at Isle Royale last September. There are FOUR employees living on the island who are hams. They use 2m to talk to family in Copper Harbor, MI and Thunder Bay, Canada so they are on the air almost every night.

Even Big Bend NP, TX (the land where asphalt and phone lines end) has a repeater.

When going to Isle Royale we were told the boat had a cellular phone but that it didn't work once we were halfway across Superior. Cellular has a few years to go before I'd give it a place in my pack.

Well, not all of us despise the W1AW policy. The league provides a valuable
service here, much more so in my opinion than your typical "bitch and whine
slash rainin' here today" roundtable net on the low bands. The bulletins
are good for emergency info. The code practice is a great
resource. Listening here, making tapes, and listening while commuting is how
I got my speed to 20 and above to earn an Extra ticket in less than 6 mos from
having no license.

What amazes me is that some (ahem... operators?) actually willfully jam these
freqs. There is enough room in the HF bands, at least for a CW operator, to
find another spot to operate.

Thank you, W1AW, for continuing this fine practice!

Good question, and a pretty good analogy, Jeff. There may not be another place
to go in this case, but there is always a place to QSY to on HF.

## 4578. SEANET Dates/Place?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-20 16:37:05 UTC
From: dearnshaw@worldbank.org
Message-ID: <1994Dec20.135051.2294@worldbank.org>
Source record: 254760

Does anyone have the exact dates and location for the 1995 SEANET conference? (I know it's on Ko Sami, but I don't know the name of the hotel.) If you also know of the contact person who arranges registration, I'd be obliged.

Thanks, Darrell (NR3Y/G4MZF)

>out of range (probably outside the aperture of the antenna, I was above it).

Could be, or it could be that you didn't have roam enabled on both the wireline and non-wireline provider frequencies, and the site belonged to the other one. Cellphones are typically *free*, however, if you get in on one of the many cellular provider promotions. Of the three cellphones I've had, I've yet to have to buy any of them outright. Since I use my cellphone, I'm on a $20/$0.20 plan where the monthly service is $20 and the per minute charge is $0.20. Not bad. But if you want it just for emergencies, most providers have a "lifeline" rate that's lower per month, though higher per minute. And, many providers will accept a 911 call from *any* cellphone, whether it's activated with a provider or not. 911 calls are typically free on any cellular system.

>2 mtr ham radios are fun and generally usefull. But, they also depend on
>repeater sites. Many locations are covered by repeaters, many more are not.
>2 mtr works so-so in the woods, or in canyons, at distances of 50 miles
>or so.

Line of sight range is typically under 5 miles handheld to handheld unless one of you is on pretty high ground. Handheld to repeater range can vary from 10-15 miles out to over 100 miles depending on the height of the repeater (and you). This is all a function of how far the radio horizon is from your location, and from the location of the other station. If the horizon circles overlap, you'll likely be able to make contact. As a benchmark, the radio horizon for a station 1000 feet above average terrain is 30 miles.

>For 1200 mile range, welcome to the exciting world of HF/SSB communication
>with a big radio, a big power supply, and a big antenna.

Not necessarily. While a 100 watt class radio like an IC735 (not a *big* radio physically, but certainly big in performance) with a car battery and a wire antenna up in the trees is nice, a little TenTec Argonaut's 5 watts will usually do to make a contact, out to 12,000 miles on a good day, and it'll run off a lantern battery, or a gell cell, for a reasonable period.

>Cost is about $400 for a pretty decent 2 meter handheld, more if you want
>dual band (for real techs or better, the way to go), and a bit more for
>extras (spare hi-cap quick charge battery, speaker-mic, case, disposable
>batter (aa size) batery case, external vehicle antenna). Figure a kilobuck
>plus for a HF rig of any stature.

Cost for a good 2 meter rig, the Radio Shack HTX-202, is around $200
on sale, and even though it says RS on it, this *is* one of the better,
if not the best, 2 meter HTs on the market right now. Dual band HTs
run in the $400-$500 range. Used rigs are cheaper, of course. The
*accessories* are what's going to eat you alive. You *need* spare
battery packs and all the other goodies, and they'll nickel and dime
you to death.

A new HF rig in the IC735 class is going to tip the scales at a
bit over a kilobuck, but used ones can be found for half that.
And the little Argonaut 509 can be found for $200 or so. Wire,
rope, and a slingshot are cheap. A small antenna tuner would
be a good investment too.

>To quote the rec.guns moderator out of context, "buy them all".

But of course. :-)

Gary

ARLX036 BSA Net/JOTA news

Boy Scouts of America is establishing a new net called BSA Net, International. It will meet every Sunday at 2030 UTC on 14.290 MHz. KB8OCC will act as net control.

Thanks to David Michelson, KB8OCC, for the preceding information.

Dates have been set for the 1995 Jamboree On The Air operating event. JOTA is an annual event in which Boy Scouts and Girl Scouts and Guides from all over the world speak to each other by means of Amateur Radio. JOTA 1995 will take place Saturday October 22, at 0001 hours local time to Sunday October 23, at 2359 hours local time.

Thanks to Dan Dansby, W5URI, for the preceding information.

>911 in the LA area (where it would really be useful).

It's not a sure thing, but typically the wireline provider will offer
free 911 access. Did you try both providers? Here in Atlanta, the wireline
provider allows 911 from deactivated phones, just as it allows free 911
calls from pay phones, as part of it's total 911 service agreements with
local government.

>It's OK in VK land as well.

It's OK in Canada as well, but the condition is that the bandwidth of the signal be limited to 1KHz (rather than the 6KHz other HF bands are allowed).

*I* have done this with packet, as I am sure others have as well, since SSB driven with 300Baud AFSK *is* limited to 1KHz bandwidth.

Tricky, maybe ... not sure what 1KHz bandwidth limited SSB sounds like :-)

Well' what I'm doing is compiling all the advice I get and show it to
him all at once<g> I have recieved a lot of interesting points via
e-mail. Thanks to all!!! I'm sure it will do the trick, and I'm almost
positive that he will choose the legal way, but I too was interested in
finding out other opinions as welll as finding out if this was a practice
already in frequent use. Thus far, most seem to think that he will get
caught if he continued over a period of time. But thus far none said if
it was common. But thanks again for the reply! Yep, I much rather self
police then have more governmental control

# 4586. Digest of Articles - QST Nov 94 (Long - 51k)

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-20 18:20:03 UTC
From: wvanho@infinet.com
Message-ID: <3d778j$qpe@rigel.infinet.com>
Source record: 254588
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Following are digests of articles printed in the November, 1994 issue of QST. Such digests are prepared for each issue of QST, and posted periodically.

It is hoped that other hams will volunteer to post similar digests of the other ham technical publications such as QEX, CQ, 73, COMMUNICATIONS QUARTERLY, RTTY JOURNAL, et al. Especially desirable would be digests of publications in other countries, such as the RSGB RADIO COMMUNICATIONS and ham magazines in Europe, Japan, Australia, and other countries around the world. We English speakers would especially enjoy them if they were translated into our language, but they would also be valuable additions to the world's knowledge if they were posted in the language of origin. Who knows? Some bi-lingual ham somewhere might translate them into English and re-post them.

Worldwide communications are getting better and better. The time has come to make the world's ham press available to all hams throughout the world!

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TA1>An ATV Station for 915 MHz - Part 1: A Miniature 1.5-W ATV Transmitter
Author>Graf, Rudolph - KA2CWL and Sheets, William - K2MQJ
Source>QST Nov 94, pp. 23-29
Abstract>Construction details for an amateur TV transmitter using discrete components.

Digest>This article describes a simple and inexpensive way to get onto amateur TV (ATV). The selection of the "915-MHz." band (actually 902-928 MHz.) introduces a band that is "at the doorstep" of the microwave spectrum, which is usually considered to begin at 1000-MHz.

The transmitter uses amplitude modulation (AM). It produces a complete NTSC video signal and a 4.5-MHz. FM audio subcarrier, both modulated onto the r.f. carrier. The entire transmitter is built in a tiny cabinet, 2.5 x 4 x 1 inch in size (63 x 100 x 25 mm.) and its output is about 1.5 watts.

The circuit uses a crystal-controlled oscillator at approximately 57-MHz. into a chain of four doublers; the output of the last doubler is near 915-MHz. Following, is a driver that feeds the final amplifier. Audio input from a microphone, amplified by one transistor, controls a voltage-controlled oscillator (VCO) at 4.5-MHz., producing an FM signal.

Video input from a camera, VCR, or other source, is amplified by a video modulator. The FM modulated signal and the video signal are combined and used to modulate the driver transistor that impresses the combined video AM modulation and audio FM modulation on the output signal.

The construction is straightforward. The completed unit can be adjusted using only a VOM, a frequency counter capable of measuring 4.5-MHz. (up to 1000-MHz., if possible), and a dummy load for which construction instructions are included. In addition, an oscilloscope, a spectrum analyzer, and a dip meter, would be helpful though not strictly necessary.

A photograph with the article illustrates two home-built corner reflector antennas; one is used for the transmitter, the other with a down-converter for reception. At the end of the article, it is announced that a companion down-converter for use with this transmitter will be described in another article in a future issue of QST.

The authors report that, with corner-reflector antennas high and in the clear, excellent picture transmission was achieved over paths of up to

15-miles (25-kms.), with the receiving antenna only 6-feet (2-m.) above ground. They feel that the range could easily be trebled if a higher-gain Yagi antenna were used at heights of 30-feet, or more, at both ends.

---

Title>TA2:A Home-Brew Loop-Tuning Capacitor
Author>Jones, Bill - KD7S
Source>QST Nov 94, pp. 30-32
Abstract>A tuning capacitor having very low losses is made of telescoping copper pipe with Teflon dielectric. A motor drive allows remote control.

Digest>In the last few years, miniature loop transmitting antennas for use on HF bands have received a great deal of attention. It is a well-proven fact that they are capable of good performance when properly made and tuned.

The key to success with a miniature antenna is to achieve exceedingly low ohmic losses in the loop and its tuning capacitor. The reason is that the radiation resistance of a small antenna may be as low as a fraction of one ohm; unless the resistance of the antenna conductor, capacitor, and all solder joints is very low indeed, it may be higher than the radiation resistance. In that case, more than half of the input power would be lost as heat.

In many ways, the most crucial component of the antenna is the tuning capacitor. Conventional variable capacitors made of aluminum and held together with screws will not perform adequately. To minimize the resistance, every joint must be carefully soldered or welded. A sliding electrical contact of any kind is out of the question.

This article describes a capacitor, designed and built by Mr. Jones, that overcomes most of the limitations of conventional capacitor design, yet is easily constructed using home tools. To avoid sliding electrical contacts, it uses a split-stator design. The completed design mimics the slide of a trombone. The "rotor", in this case, is an elongated "U" shape, the arms of which are made of copper tubing that slide into larger diameter copper tubes. The bottom of the "U" is formed of a short piece of tubing and two right-angle elbow fittings. Sliding the "U" farther into the two half-stators increases the capacity, and vice versa.

The tubing used for the stators is 3/4-inch (19-mm.) ID copper water pipe; the sliding portion is 1/2-inch (13-mm.) ID pipe. The OD of the half-inch pipe is 0.625-inches which, when centered inside the 0.750-inch ID of the 3/4-inch pipe leaves .0625-inch (1.6-mm.) clearance for the dielectric of the capacitor. If the resulting capacitor were air-spaced, that small spacing would limit the breakdown voltage of the air gap and hence the power-handling capacity of the antenna. To obtain a much higher breakdown voltage, and also an insulating slide to keep the tubes concentric, the space is filled with Teflon. Several layers

of a thin sheet of that material is wrapped around the slide members until the diameter of the slide forms a smooth slip-fit into the stator. Since the voltage breakdown rating of Teflon film is of the order of 1000-2000 volts per mil (.001-inch, or .025-mm.), the breakdown voltage of this capacitor is at least 6000-volts.

Mr. Jones made his capacitor 10-inches (25-cms.) long, which produces a maximum capacitance, with the slide fully inserted, of 56-pf. This is 5.6-pf. per inch (2.2-pf. per cm.) of length, which figure can probably be used as a design parameter for similar capacitors of different value.

This capacitor was built as an integral part of a loop antenna for operation on bands from 10- through 20-meters. The loop was formed as an octagon of 3/4"-inch copper pipe, 3-feet (91-cm.) across. The tube forming the top side of the octagon was cut in the center and elbows soldered in place to hold the stator tubes vertical. The entire capacitor was enclosed inside a plastic box fabricated from 1/4-inch (6-mm.) thick plastic sheet. Also inside the box is mounted a reversible gearhead motor driving a threaded brass rod that acts as a lead screw meshing with a nut soldered to the base of the "U"-tube. The motor is controlled from the author's operating position so that he can retune the antenna every time he changes frequency.

---

Title>TA3:Just Enough Radio - The SP-750 Spider, Jr.
Author>Agsten, Mike - WA8TXT
Source>QST Nov 94, pp. 33-36
Abstract>Construction details of a single-frequency, crystal-controlled QRP transceiver with 1-watt output, for either 80- or 40-meters.

Digest>In this article, Mr. Agsten describes what is one of the simplest and lowest-cost transceivers capable of reasonable QSOs in the ham bands. It is a single-band crystal-controlled CW transceiver, and when supplied with 14-volt d.c. power, it will produce 1-watt output and provides QSK T/R switching. Its frequency can be varied only by changing crystals.

The receiver section uses direct conversion. It has RIT and an audio bandpass filter.

The unit can be built to operate on either 40- or 80-meters. A complete kit of parts, including a mini-telegraph key and earphone, but not including the crystal and plastic case, is available from Lectrokit, 401 W. Bogart Rd., Sandusky, OH 44870. The price is $38.50, including domestic shipping. The kit also includes a detailed assembly manual.

---

Title>TA3:A Single-Board Superhet QRP Transceiver for 40 or 30 Meters
Author>Benson, Dave - NN1G
Source>QST Nov 94, pp. 37-41
Abstract>Construction details of a simple, but effective, CW QRP transceiver that provides almost all the functions of a full-size rig.

Digest>Described is a transceiver design created by the New England QRP Club as a club project. The transceiver was named the 40-40 because it was designed for 40-meters at a target cost to the builder of $40.00. More than 200 of them have now been built successfully.

The receiver section is a bona fide superhet with a dual crystal i.f. filter. It contains a variable-frequency oscillator (VFO) with a tuning range of about 40-KHz. on 40-meters, which is adequate to cover the part of that band most useful for QRP CW activities. As designed, the unit does not provide an RIT function, but that can be added as an outboard option.

The receiver circuit is straightforward and takes advantage of the sophisticated ICs now available to put most of the functions of a high-performance receiver on chips.

The receiver and transmitter sections use the same VFO, which operates at about 3.0 MHz. The maximum transmitter output is about 1.5-watts. The entire transceiver is built on a single PC-board 2.8 x 4 inches (72-mm. x 101-mm.). There are only two controls on the front panel: tuning and gain.

The ARRL laboratory tested the author's transceiver and found that it meets FCC requirements for spectral purity. They also evaluated the receiver performance and found a 2-tone dynamic range of 90-db. and a blocking dynamic range of 115-db., remarkable for so simple a receiver.

A 30-meter version of this same transceiver is now being built. The circuits are the same except for the frequencies. The 30-meter version has a slightly narrower operating bandwidth, limited to about 25- or 30-MHz.

The author reports that feedback from a number of builders has been highly favorable. He, using it himself, has had ragchew QSOs all over the US and also with a half-dozen European nations, all on the 40-meter band.

A complete kit of parts is available for $50.00, including postage, from Small Wonder Labs, 80 E. Robins Ave., Newington, CT 06111. Included are all required crystals, all onboard parts, wire for the toroids, and a manual. Be sure to specify either the 40- or 30-meter version.

Title>PR1:AEA SWR-121 HF Antenna Analyst
Author>Ford, Steve - WB8IMY
Source>QST Nov 94, pp. 77-79
Abstract>Describes an antenna analyzer that sweeps a band of frequencies and displays a graph of the SWR of an antenna. It can also feed the data into a computer for display and/or storage.

Digest>The Advanced Electronic Applications (AEA) Model SWR-121 Antenna Analyst contains a microprocessor that synthesizes an r.f. signal, limited to less than 4-milliwatts, sufficient to energize an antenna with a measurable level of forward and reflected power. Its internal circuitry makes these measurements and displays the information in the form of a graph on a small (about 2-inches x 3-1/2-inches, or 51- x 89-mm.) LCD display. Two versions of the SWR-121 are offered: one for HF (1- to 32-MHz.) and the other for VHF/UHF (120-175, 200-225, and 400-475 MHz.)

The instrument is hand-held. On the top of the case is a coax connector which is the antenna input terminal. In addition to the LCD display, the front panel contains a keypad that controls the instrument.

Most commonly, the unit is used to scan across a frequency range and plot the SWR in the form of a curve. The user sets the desired center frequency and the sweep bandwidth, using the keypad. Width can be anything from zero (a single frequency) to as much as 22-MHz. on the HF version.

Included in the instrument is a serial port and connecting cable through which the instrument can be connected to an MSDOS or Windows computer. Such a connection allows the user to save repetitive scans and display as many as six at once, for easy comparison. Also, they can be saved permanently on disk. By comparing measurements made months apart, one can often detect gradual changes that may be occurring in an antenna.

The reviewer found some minor annoyances in operation. For one thing, if one is operating the instrument on internal AA batteries (8 are required), they find that the operating life is distressingly short. Another is that the graph that is plotted on the integral LCD display provides calibration marks along the vertical axis that are not set at integral numbers; the microprocessor automatically scales the coordinates to cover the width of data obtained but assigns irrational values to the scale divisions. Consequently, it is well-nigh impossible to read an exact value from any point on the graph.

The reviewer's summary calls the SWR-121 "probably the ultimate antenna-measurement tool for amateur radio applications", but the price rather stiff. The manufacturer's list price for the HF unit is $399; that for the VHF/UHF unit is $469. Computer software adds another $75.

---

Title>PR2:JPS SSTV-1 DSP Filter for Slow-Scan TV
Author>Taggart, Ralph E. - WB8DQT
Source>QST Nov 94, pp.79-81
Abstract>A single-purpose DSP filter for optimum rejection of interference to SSTV reception.

Digest>Slow-scan television (SSTV) operating mode utilizes analog single-sideband analog signals in the same frequency bands where SSB voice is used. Interference throughout those bands is a continuous problem, and it is especially so on SSTV in which interference of all

types is permanently recorded on the image being transmitted.

Digital signal processing (DSP) is a very powerful method for making precise filters capable of shaping the received audio spectrum, at will. JPS has taken advantage of DSP technology and designed a filter system specially optimized for SSTV reception.

The audio spectrum utilized by this mode uses the frequencies from 1100- to 1300-Hz. and from 1500- to 2300-Hz. only. The optimum receiver filter would be one that passes only those frequency bands, and rejects all others. The Model SSTV-1 approaches that ideal very closely.

It is built in a compact enclosure about 6-inches wide, 4-1/4-inches deep, and 1-3/4-inches high (152-mm. x 108-mm. x 44-mm.). Being a single purpose device, it has no complex assortment of adjustments or controls and is very easy to set up. The only controls are power ON-OFF and filter IN-OUT.

The reviewer made many tests under operating conditions and also in the laboratory. He found that the performance is as advertised, and the effectiveness for on-the-air conditions is quite striking. He cites cases in which, without the filter in use, the interference was sufficient to block any transmission, at all - the screen was black - but with the filter in use, a decent picture was received.

The manufacturers list price for the SSTV-1 is $160. Any dedicated SSTV enthusiast should seriously consider obtaining one.

---

Title>PR3:MFJ-1796 Half-Wave Vertical Antenna
Author>Cain, James D. - K1TN
Source>QST Nov 94, pp. 82-83
Abstract>A simple and relatively economical miniature antenna for bands from 2- to 40-meters, not including the WARC bands.

Digest>The MFJ-1796 is a miniature half-wave vertical antenna that covers the 2, 6, 10, 15, 20, and 40 meter bands. Being only 12-feet (3.66-m.) in height, it can be called an electrical half-wave because both ends are at high impedance and the feed line attaches at a low impedance point between them; but it is far from a half-wave in length on any except the 2- and 6-meter bands.

Any shortened antenna will suffer from two limitations: first, the radiation resistance is reduced in proportion to the reduction in length; second, the operating bandwidth is narrowed. The low radiation resistance means that much higher currents must flow to radiate a given amount of power. High currents mean higher resistance losses and heat dissipation, hence reduced signal strength. One should expect that the signal reports that such an antenna will produce will be of the order of 1 to 3 S-units lower than that from a full-size dipole at a comparable height.

As should be expected, on 40-meters the bandwidth over which SWR is no greater than 2:1 is only 55-KHz. wide. Although the limitations of shortened antennas are real, whether they are important factors in everyday amateur operation is up to the individual. For rabid DXers, nothing short of a 100-foot tower mounted multi-element beam will be acceptable. But for a great many hams whose interests are directed to shorter-range activities, such antennas are very satisfactory performers. For them, the fact that the MFJ-1796 does not require radials, does not occupy much space, and is not terribly expensive, will make it appealing.

The reviewer found that the antenna required no more than two hours to assemble and was relatively easy to erect. Tuning it, however, was a bigger job. It required lowering the antenna to the ground at least a dozen times before the tuning was complete; at that, he admitted that it was still not optimally tuned - he just ran out of patience.

The manufacturer's list price is $200.

Title>TC1:A Practical, Compact, Multiturn Transmitting Loop Antenna for 80-Meters
Author>Jones, Jon K., M.D. - NO0Y
Source>QST Nov 94, p. 87
Abstract>A miniature loop antenna for 80-meters that provides relatively good efficiency.

Digest>Many articles have been printed about miniature loop antennas over the past several years. Most of them have emphasized the need for reducing ohmic losses to the absolute minimum to avoid severe losses of transmitter power. Mr. Jones describes a loop that he has built for 80-meters and the precautions he has taken to maximize its efficiency.

The antenna is rectangular in shape, 9-feet wide and 7-feet tall (2.74-m. x 2.13-m.), and it contains 3-turns. He made it of No. 10 copper wire and inserted a capacitor in the center of the bottom side of each turn. Initially, he made each capacitor from a length of RG-8 coax cable; one side of the capacitor is the center conductor and the other side the shield. He tuned the loop to resonance at the frequency he desired by trimming each capacitor a bit at a time, keeping them all of equal length. RG-8 coax has a breakdown voltage rating of 5000-volts and it makes very good capacitors. Nevertheless, after he had finished tuning, the author replaced them with doorknob capacitors of equal value. No provision is made for retuning during operation.

The author calculated the theoretical efficiency of the antenna and found it to be 9.2-percent. Although this means that more than 90-percent of the transmitter output is lost as heat in the antenna, it

is substantially higher in efficiency than many such antennas that have been described in the literature. Using the antenna and his 100-watt transceiver, he has had excellent results. During the ARRL 1994 Phone DX Contest, he worked 9 DX contacts, including Portugal and Hawaii, on 75-meters from his home in Kansas.

---

Title>TC2:Eclipse-Enhanced HF Propagation
Author>Lewis, David K. - W2HMT
Source>QST Nov 94, pp. 87-88
Abstract>Results of a study of radio propagation on the 80- and 40-meter bands during a recent annular eclipse. Signals improve dramatically as the moon's shadow passes over the earth.

Digest>On May 10, 1994, an annular solar eclipse was visible over most of the United States. The author used the opportunity to make a study of radio propagation, before, during, and after the shadow of the moon passed across the country.

Before the eclipse occurred, he carefully observed band conditions both the day before, and also on the morning before the it began. On May 9, band conditions during the daylight hours on both 80- and 40-meters were normal. He did not detect any propagation paths longer than about 350-kms. on On 80-meters, nor 700-kms. on 40.

On eclipse day, May 10, the 80/75-meter band was totally dead until the moon's shadow came within radio range at about 1703 UTC. At that point, the author states: "...the band literally popped open." Strong signals from as far as 1350-kms. were heard, 10- or 20-dB. over S-9.

Conditions on 40-meters were similarly enhanced. Signals of up to 20-dB. over S-9 were heard from as far as 1400-kms. After the eclipse was over, and the moon's shadow totally left the earth, there were still numbers of strong signals, but the distances shrank to no more than 650-kms.

It is clear that radio propagation responds very quickly, indeed, to changes in solar radiation.

HINTS AND KINKS (HK)
Conductor: David Newkirk - WJ1Z
Sr. Asst. Technical Editor

---

Title>HK1:An Experimental 1/2-W CW Transmitter
Author>Smith, Lew - N7KSB
Source>QST Nov 94, p. 84
Abstract>Describes a transmitter made from a single CMOS chip.

Digest>Mr. Smith's letter, including a wiring diagram and parts list, describes a crystal-controlled oscillator made from a single CMOS chip, a 74HC240 high-speed octal buffer. One section acts as a crystal

oscillator, four sections in parallel form a power amplifier. Three sections are unused. Output power is about 0.5-watts.

The unit should be operated with a controlled power supply voltage between 7.8- and 8.0-volts. The output circuit is a bandpass filter to remove harmonics. Component specifications are included for 10-, 15-, and 20-meter operation. The ARRL Laboratory has tested the unit and verifies that its spectral purity meets FCC regulations.

---

Title>HK2:Repairing Heat-Cycling Failures in VHF/UHF Rig Output Modules
Author>Gruenwald, John - K0BF and Stockton, David - GM4ZNX
Source>QST Nov 94, pp. 84-85
Abstract>Describes home repair of open-circuits caused by a broken substrate resulting from excessive heat.

Digest>Both authors report success in home repair of out-of-warranty rig failures caused by overheating of the output stages. Mr. Gruenwald's Kenwood TM-732 developed an intermittent failure to transmit. He removed the power amplifier module which is a gray block. The cover is easily removed if one pries open some small tabs. Nine transistors built on a thin ceramic base act in parallel as the amplifier. The ceramic had cracked, breaking a lead in a printed-circuit r.f. choke in the driver stage. He soldered over the break, reassembled the rig, and it has been operating properly ever since.

Mr. Stockton reports similar problems that occur because many VHF/UHF mobile rigs do not have sufficient heat-sink capacity to handle the load of long ragchewing. Usually breaks in the ceramic substrate can be repaired by soldering one or more fine wire bridges over the gap.

The editor notes that manufactured rigs can often be repaired at home, saving considerable time and money. But this should be done only to a rig for which the warranty has expired, for obvious reasons!

---

Title>HK3:Constant-Carrier AM for the Drake Twins
Author>Thomason, Steve - WB4IJN
Source>QST Nov 94, pp. 85-86
Abstract>Describes a conversion for the Drake T-4XB transmitter to improve the quality of the signal received by a remote listener.

Digest>The Drake 4B-line, as manufactured, used controlled-carrier AM. This means that, in between words, the carrier dropped to as low as 1- or 2-watts output. That makes it difficult to copy using vintage AM receivers. The author modified his T-4XB transmitter so that the carrier level never drops below about 10-watts output, making it far easier to receive.

He did it by converting the rig's 6AU6A pentode modulator to a triode by tying together the screen and suppressor grids to the plate. Then he coupled the output to the screen of the 12BY7A driver tube through a .01-uF. capacitor, screen modulating it.

He reports that the operating results are as he desired. He finds it very convenient to be able to switch instantly between SSB and good-quality AM.

---

Title>HK4:Wrist-Rest for Keyboard Operators
Author>Seaton, S. L. - K4OR
Source>QST Nov 94, p. 86
Abstract>Describes a simple wrist-rest for anyone operating a keyboard.

Digest>Mr. Seaton found it tiring to have to have to hold his fingers above the keys of his word processor. He found he could relieve the stress by arranging a soft pad for his wrists to rest on.

He made the rest from a piece of "Polytherm" insulation, a plastic-foam tube made to slip over a 7/8-inch (22-mm.) ID water pipe for thermal insulation. He cut the tube to a length appropriate for the width of the keyboard and slit it longways. He then slipped it over the edge of a piece of 3/8-inch (9.5-mm.) plywood, and slid the plywood under the keyboard. The resulting soft rest has made long periods at the keys much less tiring.

---

Title>HK5:Curing Intermittent Meter Operation in the Telex Tail-Twister T2X Rotator
Author>Doherty, Robert J. (Whitey) - K1VV
Source>QST Nov 94, p. 86
Abstract>Addition of ferrite beads prevents RFI from causing false readings of the antenna direction.

Digest>Mr. Doherty was plagued with intermittent meter indications in the position-sensing circuit of his rotator. He discovered the problem resulted from RFI; when he ran his amplifier at full power, r.f. pickup in the control leads caused arcs and burned spots on the position-sensing pot. He solved the problem by adding ferrite beads on the two wires at the pot.

The editor notes that Telex will incorporate the ferrite beads in all units built henceforth.

---

Title>HK6:A 1-Switch Compact Loop
Author>King, John H. - NH6ZF and Galindo, Antoine F. - AC6G
Source>QST Nov 94, p. 86
Abstract>Substitute a superior switching scheme for that described in the Capon article in QST May 94.

Digest>Author Galindo points out that, in the article by Capon: "You Can Build a Compact Loop Antenna for 30 Through 12 Meters", QST May 94, the control circuit shown in the diagram with the article contains independent switches for "Forward" and "Reverse". Actuating both simultaneously will place a dead short across the battery or power supply.

Both authors King and Galindo suggest an alternative switching arrangement using a single DPDT switch, with center neutral, to control the drive motor that tunes the antenna.

---

FEEDBACK (FB)

---

Title>FB1:"An SWR Detector Audio Adapter" QST Jul 94
Author>Lones, Dain - KC6WZK
Source>QST Nov 94, p. 88
Abstract>Correction for Figure 1 of the subject article.

Digest>Figure 1 of the article, p. 24, should show on chip U2A, pin 15 should be connected to +5.0-volts and pin 8 to ground.

---

Title>FB2:"A Smart Charger for Nickel-Cadmium Batteries" QST Sep 94
Author>Johnson, Bob - AA4L
Source>QST Nov 94, p. 88
Abstract>Correct an error in the diagram of Figure 2 of the subject article.

Digest>On Figure 2, a 150-ohm resistor is misplaced. The correct connection should be between the emitter and the base of Q1. Also, the solution of Equation 4 is incorrect. R(sense) should be 1-ohm, not 1000-ohms.

---

Title>FB3:"A Reevaluation of the Caron RF Impedance Bridge"
Author>Camillo, Charles - W6TGK
Source>QST Sep 94, p. 88
Abstract>Correct four equations in the subject article.

Digest>In the article, four equations contain mistakes:
In Equation 6, p. 29, the right side of the equation should read: I(2)X(R)
In Equation 10, p. 29, the denominator of the fraction should read: X(R) - X(1)
In Equation 19, p. 30, the denominator of the fraction should be: (C(1) - C(R)) + jwRC(1)C(X) ("w" stands for omega)
In Equation 20, p. 30, there should be a subscript "U" on the "R" in the denominator, like the one in the numerator

These errors are typographical only, they do not affect the end results described in the text.

---

NEW HAM COMPANION (NHC)

---

Title>NHC1:The Doctor is IN
Author>Various
Source>QST Nov 94, p. 66

Abstract>Questions and answers of primary interest to newcomers to ham radio.

Digest>Quest
ions discussed this month include: non-contaminating coaxial cable; antennas for use at low heights; switching transceiver input between a modem and a microphone; waterproofing coax connectors; problems of over-deviation in FM modulation; and problems of using DOS programs in a Windows environment.

---

Title>NHC2:A Fishing Tackle HF Station to Go!
Author>Capon, Robert S. - WA3ULH
Source>QST Nov 94, pp. 67-68
Abstract>Illustrates how the author packs his station in a tackle box.

Digest>In this article, Mr. Capon describes how he carries a complete QRP station in a fishing tackle box. The box contains a top compartment and four drawers. He carries a transceiver, battery, solar-cell charge controller, SWR analyzer, paddle, and headphones in the top compartment. A large number of tools and miscellaneous items fill all four of the drawers. A solar panel, an Outbacker antenna (disassembled), and aluminum foil for a counterpoise are carried external to the tackle box.

The author does not state the total weight he ends up carrying!

---

Title>NHC3:Hams 'R Us Kids Net
Author>Bernotas, Vince, III - N2WXE
Source>QST Nov 94, p. 69
Abstract>Describes a 2-meter net formed by kids, for kids.

Digest>The author is 11-years old. On December 12, 1993, he started the "Hams 'R Us Kids Net" in Plattsburgh, NY. It is a 2-meter repeater net that was designed to encourage kids to participate in ham radio. The local radio club gave him permission to use the club repeater for the net one hour on Sunday evenings, starting at 1900 local time.

The author acts as net control and initiates each session by reading a preamble, then accepting check-ins from kids under the age of 16. After a half-hour, check-ins are opened to adults. Then the adults are paired off with kids in partnerships, which many have found to be rewarding for both partners.

---

Title>NHC4:A NiCd Never Forgets. Or Does It?
Author>Gruber, Mike - WA1SVF
Source>QST Nov 94 - pp. 70-71
Abstract>Corrects misconceptions regarding NiCd "memory effect".

Digest>"Conventional wisdom" has it that NiCd batteries are very prone to a "memory effect". Supposedly, if one never discharges such a

battery very far through use before recharging, the battery will progressively recharge to a lower and lower voltage and will hold only a fraction of its original charge capacity. The purported way to overcome this problem is to be sure always to discharge the battery completely before recharging.

This article refutes that "wisdom". Although such an effect can happen under very unusual circumstances, it is rare. What is common, however, is the "voltage depression" effect that is caused by long, continuous overcharging. A battery suffering from that effect will charge to the normal voltage but, after delivering power to a load for some period of time, its voltage will rapidly drop between 0.1- and 0.2- volts and remain at that level until completely discharged.

Fortunately, even if a battery reaches this state, it is easy to correct the problem. All it requires is one or two complete charge/discharge cycles; that is, to discharge down to a voltage 1.0-volts, then fully recharge it.

One should not discharge NiCds below 1.0-volt if it can be avoided, as shortened life may result.

---

Title>NHC5:Building and Adjusting Trap Dipole Antennas
Author>Edwards, A. W. - K5CN
Source>QST Nov 94, pp. 72-73
Abstract>How to build and tune trap dipoles.

Digest>This article describes how to make, and tune, multi-band dipoles made with traps in the "classic" manner. This means a dipole, fed in the center, with a pair of traps resonant at the highest frequency band for which the antenna is to be used attached to the ends. Next, short pieces of wire are added to each end beyond the traps, and the wire trimmed until the full antenna resonates at the second highest band desired. Another pair of traps, resonant on that band, are attached to those wire ends. This procedure is repeated until the lowest desired band is reached, but no traps are added for that band. The end insulators are attached, instead.

To make it easy to adjust the wire length each time a new band is being resonated, the author recommends the use of copper "split-nut" connectors (available from industrial electrical supply houses). The wire being adjusted is cut in two pieces and the pieces are overlapped for a considerable length, each pair of wires held in place by two split-nuts. Then effective length can be adjusted easily by sliding the wires past each other. After the proper dimension is found, the joint can be soldered.

---

Title>NHC6:The Repeater Eater
Author>Murphy, George - VE3ERP
Source>QST Nov 94, pp. 74-76

Abstract>Describes a 2-meter beam antenna for indoor use.

Digest>This article describes a 2-meter 2-element quad antenna built for indoor use. It is made of lightweight wooden sticks, made from pieces of 3/4-inch (19-mm.) quarter-round molding, supporting the two quad elements, made of wire. The antenna is held together by glue and rubber bands and is suspended from the ceiling of an inside room.

The boom, like the spreaders, is a piece of quarter-round molding. The two spreaders for the driven element are 793.5-mm. (31-1/4-inches) long and those for the reflector are 812-mm. (32-inches) long. The boom is 560-mm. (22-inches) long. Each of the four sides of the square driven element is 524-mm. (20-3/8-inches) long; those of the reflector are 550-mm (21-3/8-inches). The feed point is located in one of the vertical sides of the driven element.

Each pair of spreaders is glued together as an "X". At the points where the spreaders cross, a cradle is formed for the boom to fit into. It is made of a 75-mm. (3-inch) long piece of right-angle wood molding, glued perpendicular to the spreaders and fitted into the crotch of the "X". The right-angle edge of the boom fits into the right-angle grooves in the cradles of both elements, and is held in place with rubber bands. The spacing between the driven element and the reflector is adjusted for minimum SWR.

The author soldered an SO-239 coax fitting into the wires at the feedpoint, and enclosed it in a plastic 35-mm. film cannister. The ends of the spreaders that bear against the ceiling are fitted with rubber or felt furniture bumpers. To aim the antenna in azimuth, one pulls the whole antenna down a bit from the ceiling, turns it in the desired direction, and releases it. The rubber band pulls it against the ceiling where it is held in place by friction.

RADIO TIPS (RT)

---

Title>RT1:Selective Calling
Author>Ford, Steve - WB8IMY
Source>QST Nov 94, p. 73
Abstract>"Selective Calling" makes a transceiver respond only to calls.

Digest>Selective calling is a feature that is provided with most FM transceivers. This feature allows the rig to perform like a telephone; that is it can be left "ON", monitoring a particular repeater, or simplex frequency, but nothing will be heard unless someone specifically calls. In order to set it up this way, if the transceiver utilizes DTMF, the operator must select a certain tone sequence. If a calling station starts by sending those tones (the same tones used by touch-tone telephones), the receiver will be activated.

A different selective-calling scheme is called CTCSS, or PL (Private Line). It uses low-frequency sub-audible signals that are mixed with

the normal voice audio. In most cases, the tones cannot be heard over the air. With CTCSS, only one tone is involved, and the calling station emits that tone continuously for the duration of the conversation. When the tone ceases to be received by the called party's receiver, it goes dead.

Title>GI1:The World's Greatest DXer
Author>Cain, James D. - K1TN
Source>QST Nov 94, pp. 42-45, 83
Abstract>Describes the amateur radio activities of Bob Eshleman - W4DR.

Digest>This is a sketch of the ham career of Bob Eshleman - W4DR. He was first licensed in 1950, at age 14. He is a dentist, a professor and department chairman at the Virginia Medical College.

Mr. Eshleman has, apparently, won more awards for DX achievements on all bands from 160- to 2-meters than any other person on record. The article contains details of his many accomplishments.

---

Title>GI2:Hams of Ability
Author>Myers, Karen D. - KB7ZXE and Bridgman, Gurnee - W9NT
Source>QST Nov 94, pp. 46-48
Abstract>Describes amateur activities by, and for, handicapped people.

Digest>This article is made up of two short sketches. The first, by Ms. Myers, describes the ham activities of Cleve LeClair - N7IXG, who is a quadriplegic. Although he is confined to a wheelchair and must use a ballpoint pen held in his mouth to write, he has become an expert radio operator, avid DXer and contester, and was a valuable contributor to the most recent Field Day activities as a member of the Radio Amateur Volunteer Emergency Services (RAVES).

The second sketch is about the Courage Center's HANDI-HAM system. It is an activity that combines camping with learning and is open to disabled people of all ages who want to become radio amateurs. Included are people with all types of physical disabilities: blind, deaf, unable to write, etc. Each fall, the organization puts on a one-week session with the goal of helping each participant become a ham.

The camp is located on Lake George in Northern Minnesota, about 15-miles south of Bemidji. The Educational Director of Courage Center Headquarters, located in the Twin Cities, is Sister Alverna O'Laughlin - WA0SGJ. Many other hams volunteer their services and find the experience of helping handicapped people reach their goals is very rewarding.

---

Title>GI3:The NCDXF/IARU International Beacon Network - Part 2
Author>Troster, John G. - W6ISQ and Fabry, Robert S. - N6EK
Source>QST Nov 94, pp. 49-51
Abstract>Describing new features to be added to the International Beacon Network in Phase III.

Digest>The first installment of this series, in QST Oct 94, described the current 14.1 MHz. worldwide beacon network, called Phase II. That network, which has been in operation for 15-years, is soon to be expanded, technically upgraded, and will be called Phase III. This installment describes certain technical changes to be made.

The first is to overcome an operational problem that has plagued the Phase II transmitters. Namely, the problem of clock synchronization. Each transmitter must know, to an accuracy of better than plus or minus 3-seconds, when to transmit. The Phase III system will greatly speed up the cycling and will force an even tighter tolerance on timing. Consequently, the new transmitter installation will utilize a GPS receiver that will provide time synchronization to an accuracy within 1-microsecond!

A second improvement is the addition of a microprocessor to control the ALC bias voltage on each transmitter so that the power output will be accurately controlled at the four different output levels: 100-, 10-, 1-, and 0.1-watts, transmitted in sequence.

When complete, the Phase III network will allow one to check for band openings on all of the 5 bands from 20- to 10-meters within 3-minutes.

---------

Title>GI4:Exploring the Internet - Part 3
Author>Ehrlich, Scott - WY1Z
Source>QST Nov 94, pp. 52-54
Abstract>Use of Telnet, Anonymous FTP, and Archie on Internet

Digest>This installment describes several specific ways that information can be obtained through Internet. The first is through the process known as Telnet. When a person uses the Telnet process, they get control of a remote computer and can command it to respond with specific information just as if they were sitting in front that computer and activating keys on its keyboard. This is true in spite of the fact that the computer may be half a world away!

As an example, a ham can access the call sign database at the University of Buffalo and get the same data that they would get by consulting a Callbook. To do that, one must have a connection that provides Telnet software along with the link to Internet. Then type: "telnet callsign.cs.buffalo.edu 2000". The server in Buffalo will respond: "Connected to electra.cs.buffalo.edu". At that point, one can type: "help" and the list of available commands will be printed on the screen. This shows how to look up a ham station by call sign, by city, by last name, or by zip code. The user then types the appropriate command, and the information will appear on the screen.

The next function described is "anonymous FTP". FTP stands for file transfer protocol and, using it, one can download a specific file from any remote computer that allows access in this manner. It is called "anonymous" because anyone can log into the computer without restrictions; that is, one does not need to have an account on the computer they are logging into.

The author of this article works with the Boston Amateur Radio Club and maintains a list of files useful to radio hams on a server at Oakland University in Michigan. Its anonymous ftp address is: oak.oakland.edu. Another site with many useful files is University of California, San Diego. Their address is: ftp.ucsd.edu. To log into an anonymous ftp server, when asked: "name:", the user responds: "anonymous". To "password:", they give their E-Mail address.

For people whose access to Internet is limited to E-Mail only, N8EMR maintains a callsign directory, for U.S. calls only. To utilize it, one sends a message to: "callbook@n8emr.cmhnet.org". The first line of the message must be: REPLY (user's E-mail address). The second line: "CALL (list one or more callsigns, leaving a space between them)". Note: the commands must be in all capital letters.

The third function described is the Archie utility. This lets one search for files and directories throughout the entire Internet system. To utilize it, one types: "archie (subject)".

An example included in the article shows what happened when the author entered: "archie hamradio". The computer responded with a list of many sites that contain directories named "hamradio". Using that information, one can then access each site listed using anonymous ftp.

Title>GI5:The Wire Antenna
Author>Schmidt, Steven R. - KR4DL
Source>QST Nov 94, pp. 55-56
Abstract>Humor.

Digest>This is a humorous article describing the attempts made by an unnamed ham to raise a wire antenna into the top branches of two trees, using a slingshot, fishing line, and sinker. After many frustrating tries, he was unsuccessful.

The story may, or may not, have been an account of the author's personal experience.

---

Title>GI6:3Y0PI - The Peter I Island 1994 DXpedition
Author>Schmieder, Robert W. - KK6EK
Source>QST Nov 94, pp. 57-61
Abstract>Describes the DXpedition to Peter I Island near Antarctica.

Digest>This is an account of the DXpedition to Peter I Island, which is, perhaps, the most isolated place on the face of the earth. It is located 280-miles (460-kms.) off the continent of Antarctica.

Nine amateurs risked their lives and spent a very large sum of money to operate ham radio stations on that island for the first time in history. They succeeded in logging 60,000 contacts at a cost near $4.00 per contact! This is the detailed story of their accomplishment.

---------

Title>GI7:In the Line of Fire
Author>Wall, Cynthia - KA7ITT
Source>QST Nov 94, pp. 62-63
Abstract>Sketch of Terry L. Johnson - KB5PRF, a forest-fire fighting pilot.

Digest>This is a sketch of Terry L. Johnson - KB5PRF, who pilots aircraft dropping fire-extinguishing chemicals onto forest and brush fires. He was one of the pilots who tried to save the lives of firefighters in Colorado in summer, 1994. The fire ultimately claimed 14 lives, but Mr. Johnson was able to help save 9 others by dropping a load of chemicals on and around them, allowing them to escape.

Mr. Johnson is also an active radio amateur.

I only wish that this was the case! I was asked to put my HT away
on two american airlines flights a few weeks ago. I said that i was
only listening, but was asked to put it away. This really sucked
because i was hearing some cool repeaters while over delaware.

oh well....

Well, that certainly explains the big smoking crater out by Mt. Wilson.
I wondered why all the flights out of LAX hit the mountain.

Even listening, your local oscillator is radiating a hell of a lot of
garbage. It's not as bad as the FM broadcast band radios where the
receiver local oscillator falls right into the aircraft navigation band,
but it's still nasty stuff.
--scott

(When I fly, I stick my head out the window and ask the pilot if she's
using the VOR, and if she says it's okay, I unplug the BNC connector
under the back seat and plug the HT into the nav antenna.)

The "yes-you-can/no-you-can't/receive-is-ok/they-can't-confiscate etc., etc., debate has overlooked one key fact: The Federal Aviation Regulations (FARs) *specifically* state that no electronic device may be taken aboard a licensed commercial carrier *without* the permission of the carrier. It matters not what FCC license you may or may not have, it is the *carrier's* call. There is a good reason for this: In the event of an accident, the *carrier* may be held responsible, perhaps even culpable, if it can be shown that interference by a passenger-operated electronic device contributed to the cause of the accident.

Some carriers have tested themselves, or seen sufficient test data from others, to feel confident that some or all devices pose no threat. Some carriers feel the data is insufficient and prefer to err on the side of safety, and some just don't want to be bothered at all so they establish a blanket prohibition.

As a licensed carrier, held *legally* responsible for the safe operation of the aircraft6, every airline has the right to prohibit operation of any electronic device on that aircraft. It is worth noting that another section of the FARs states that the pilot-in-command has the *ultimate* authority and responsibility for the safety of his/her aircraft, and so even if an airline said it was OK a particular PIC could state "Not on *MY* airplane!" and he has a legal right to do that under the FARs. Obviouly, this could result in bad publicity for the airline if taken to extremes, or even to loss of the pilot's job, but there are some airlines whose policy is predicated on the fact that they have no intention of accomodating a small minority of passengers (such as hams) just so they can play with their electronic "toys" in flight.

And, BTW, whenever FCC regulations *permitting* something conflict with FAA regulations *restricting or prohibiting* the same thing in an aircraft, the FAA rules take precedence inasmuch as the FAA is responsible for air safety, *not* the FCC.

From: walshs@gate.net (Sean Walsh)
Subject: 2-meter HAM vs. Cellular

I read somebody's message discussing this subject a couple of months ago, and
I'd kind of like to get some opinions from people familiar with both. Which
do you think would be better for emergency communications while on the road -
a cellular phone or a 2-meter mobile radio? For starters, let's get the
obvious out of the way: Yes, I know I would need to get at least a no-code
technician license to use the 2-meter, and no, I am not interested
in the day-to-day use of a cellular phone. What I would really want it for
is emergency type communcations when I'm out camping 30 or 50 or 1200 miles

from home. Specifically, I am interested in things like comparative ranges, usability in mountain/desert areas, and last but not least, cost. Anyone out there with an opinion on this subject?

Interesting question. You mention that you would like to use it when camping or in remote locations. In remote locations of Texas, I have no idea what the cell coverage is, but I know there's a repeater in Big Bend National Park and one in Guadalupe National Park. I WILL say that in general, from a remote location, you probably have a better chance of hitting a repeater with your handi-talkie than you do accessing a cell sight. Now, that will change over the next few years as more and more cell sights get added to the system. However, the cell coverage is still concentrate along interstate highways and larger towns.

The risk you run with ham radio is being able to key a repeater, but not getting any response - no one may be listening.

On the other hand, with cellular, you have the continuous monthly charge, usually a minimum of $30/month, and that will buy alot of 2 meter radio!

So, it's kind of a wash. When I go camping, I try to take both with me - my pocket phone and my dual band talkie. And I've been in places where NEITHER one works, so go figure.

In the city, if you don't want to fork out the money for a cellphone, then 2-meters is great for emergency communications, and you'll have the added benefit of usually having alot of volunteers to come and help you if you're in a bind (out of gas, accident, etc), whereas with cellphone you are limited to commercial services.

Boy, Are you missing the point!
For the average Amateur CW gives the most bang per watt than any other!
I've made many a QSO on 144 Mhz CW that NEVER would have happened on SSB
or FM. CW is a skill that should be nurtured and coddled till you can
copy 20+ WPM in your head. Once you've improved your skills to this
level you will understand how wrong your comments about "The EVIL CW"
truly are.
Use it, Enjoy it, revel in the fact less than 1% of the population has
the ability. CW exists and will continue to exist because of its
excellent "Weak Signal" characteristics.
CW FOREVER! de Tim - NC7K...

When I was up there it was hard even to hear a broadcast station. I think if
you want reliable communication from that area you would have to carry a
satellite telephone. In any case, if you are going to communicate for help
then you had better be able to give your location. I would carry a GPS
receiver. In fact, a gps in the boundry waters could sure save a lot of
wrong turns! Kind of a high tech soulution that may not fit with that kind
of a trip esthetically speaking I suppose!

Last week I had occasion to make a business trip from San Francisco
to Baltimore, Washington National, Cleveland, Cincinnati, and
back to SFO. I took my new Eagle AccuNav Sport GPS receiver with
me.

Both Delta and United allow the use of handheld GPS during the
cruise segment of the flight.

First of all, the Eagle performed flawlessly. For most of the trip, I had no
trouble picking up four satellites through the aircraft window and
often had five. On the trip out I had arranged for South facing
windows, but the unit seemed to work equally well facing North or
South.

Leaving SFO, the Eagle acquired a lock within just a few minutes of
turning it on. It was very interesting watching the speed of the aircraft
increase as we climbed the last few thousand ft. to our cruising altitude.
The Distance to Go indication clicked off the miles with satisfying
regularity. On the trip back, the unit had to enter cold start mode
both after I initially turned it on and after I re-started it after dinner.
It took about 15 minutes each time to re-acquire the satellites, but then
maintained a steady lock for the duration. I wish I could have had it
on for the approach and departure phases of the flight, but I was a good
citizen and turned it off :-)

Before departure, I entered waypoints for major cities scattered across
the country. On the unit's graphical display I could observe our
position with respect to each of these locations - often with several
on the display at once. The display can be scaled from one tenth of
a mile on a side to one thousand miles on a side. The direct path
to our destination and the actual path taken are continuously
displayed and updated at one second intervals.

I've always been frustrated on commercial flights with not knowing
exactly where over the country I was... no more. I took with me a
Global Navigation Chart (#2) which fits the entire country on one
(rather large) sheet of paper. I could track our course on a continuous
basis throughout the flight - even when over a cloud deck.

The one problem that I saw with the unit is that it displayed an
"Arrival Alarm" several times when we were nowhere near our
destination. This always happened after I had been playing with
the cross hair function. I suspect a software problem but will have

to do more testing to be sure. I also suspect that it does not
calculate great circle distances to the destination, I've yet to plug
in a destination on the opposite side of the globe to check on this.

All in all, I'm extremely satisfied with the unit. It consumed two
sets of batteries on the trip. Since it is not known as a frugal user
of power, I expected this. In Cincinnati the folks at the X-ray machine
wanted to see what the spare batteries were - no one else seemed
concerned :-) or :-(.

Regards,

Rick

From: milway@tecnet1.jcte.jcs.mil
Subject: HAM radio on airplane/ answer

All the discussion about radios on commercial airplanes lead me to put
my two cents in. First, I fly a lot on commercial airlines (used to have
a private pilot license, but so what) and find that the rules are different
on different airlines. Some specifically list "scanners" as acceptable devices
that can be operated onboard. This suprised me because AM/FM recievers are
prohibited on virtually all flights, including those that allow scanners.
Would
a two meter tranciever listening only be considered a "scanner"?

I do know that I had absolutely no problem carrying my TH22 onboard last
week, going to El Paso. American out and Continental home. Security did
not challange in any way.

The list of acceptable devices is in the Inflight Magazines. Check to see
that scanners are accepted on the particular airline before using one onboard.

This is what I'm basing my argument on also, Jerry. Last time I flew on
Delta, I went over their PED rules many-a-times, and ruled out what and
what not they were talking about. They did make it quite detailed on
what was permitted and what was not, however.

But Gary...you just confirmed that GPS receivers, *RECEIVERS* being the
key word here...are legal to operate aboard an aircraft. That goes to
contradict your previous statement of "So, you can't legally use a radio
on an airliner." Either that, or else your definition of using a radio
is on the Xmit side.

From: zlau@arrl.org (Zack Lau (KH6CP))
Subject: Is VOX a function of the mic or the transceiver?

KC5JRR David Jenkins (djenkins@jetson.uh.edu) wrote:
: Am considering phone operation, but have to invest in a mic. Is VOX a
: function of the mic or is the circuitry in the transceiver?

Either. There have been mics with VOX built in--I remember a Telex mic
that used a little battery. Icom even has a little box for adding VOX.

: Would it be possible for me to buy a mic that will work with the Argonaut
: but will be usable on a newer rig if I ever do purchase one? Are there
: adapters that will take a 4-wire (I guess) connectiog cable to 2, and vice
: versa?

There isn't a standard for mic connectors. Heil, who makes microphones,
first started selling 4 different versions of each mic--one for Yaesu,
Ten Tec, Kenwood, and Yaesu, each with the appropriately wired connector.
They still do, but have an intermediate connector, so you can buy a
different adapter cable in case you change rigs.

It's not just good advice, it's required by FCC Part 97, which I quote
here for all to see (pay close attention to sections a and c):

97.11 Stations aboard ships or aircraft

(a) The installation and operation of an amateur station on a
ship or aircraft must be approved by the master of the ship or pilot in

command of the aircraft.

(b) The station must be separate from and independent of all
other radio apparatus installed on the ship or aircraft, except a common
antenna may be shared with a voluntary ship radio installation. The
station's transmissions must not cause interference to any other
apparatus installed on the ship or aircraft.

(c) The station must not constitute a hazard to the safety of
life or property. For a station aboard an aircraft, the apparatus shall
not be operated while the aircraft is operating under Instrument Flight
Rules, as defined by the FAA, unless the station has been found to comply
with all applicable FAA rules.

# 4592. Modifications to HT legal? What does FCC say?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-20 20:27:06 UTC
From: mudaw@uxa.ecn.bgu.edu
Message-ID: <3d7emq$car@ecom3.ecn.bgu.edu>
Source record: 254593

HELP!!!
A while back, university police searched my dorm room while investigating a theft on my floor.

During the search, one of the officers discovered my YEASU FT23R, and turned it on.

They discovered my radio had been modified to receive and transmit out of band.

The school charged me with possession of an illegally modified radio. I faught the charge and it was dropped.

Due to the trouble I got into for having other things in my room, (traffic signs, firecrackers, carbureter cleaner, etc) I am just now trying to get my property returned.

I went to court today to petition the return of my personal property, including the radio.

The university police, the local sherrif's office, and the states attorney all told the judge my radio is illegal to possess.

To the best of my knowledge, my radio is perfectly legal, so long as I never transmit on frequencies I am not licensed for.
(the sherrif's office had a fit when they realized it could be tuned to and transmit on their frequency)

I need to find someone who is familiar with the FCC rules and can tell me exactly which paragraph, section, subparagraph...etc. that will tell me wether my radio is illegal or not.

The judge is not allowing me to have my radio back, but I am going to try again if I can find proof that it is legal for me to possess in its modified condition.

I'm not arguing the morals of having a radio which is capable of transmitting on police frequencies, I am just arguing the LAW. I am a bit perterbed that the local police agencies don't need any proof to back their statements.

Any help is appreciated.

By the way, when I called the FCC, they indicated that there is no law indicating such a radio is illegal. They didn't have the time to muddle through the rules to try to determine if it IS legal.
I guess this is like saying that you can't find in print where it

is legal to drive 20mph in a 30mph zone, although if you read
more carefully, you can determine it is legal.

Thanks again.
Dave

Hello Geri:

Yes, you are quite correct. The treaty between the U.S. and Canada is specific with respect to citizenship - in order to take advantage of the reciprocity, the visiting amateur must be a citizen of the country from wich the license was issued.

Seeing that your hold a German licence, you just have to apply for a visitor permit. You can get it beforehand, or just visit a district office and they should be able to fix you up in a few minutes.

By the way, since you hold two calls, why don't you go for a Canadian certificite?

Kevin would you please post all the sources that allow an individual
amateur station to declare an emergency.

You might be surprised that the Government agency has to declare the
emergency through a formal process involving the state or county office of
emergency services. You can't decide just because your friend has a broken
leg with blood gushing. that a disaster or emergency exists. Most
government agencies treat the medical aide calls as routine and in no way
an emergency

You may wish to read Part 90 as well as Part 97 for more information.

Your friends who used public safety frequencies to report incidents.
probably have established a working relationship with those agencies and
have a letter of authority to use their radio systems.

In the future please don't YELL at us unless you can cite your references.

Bob

[stuff deleted]
> so don't worry about no cell site or ham repeater. you can just use
> the police freqs to obtain help if stranded. the nation wide police freq is:
> 155.475mc.

i dunno, i think this sounds really fishy to me. everything that i've seen says "never ever ever xmit on police frequencies" and i think that if the police heard a call from a ham who said "hey, i'm stranded, could you send a tow truck" would probably be pretty pissed. they might forgive you if the message was something like "help, i'm in a flaming bus filled with school children about to fall from a cliff into a tanker of gasoline right next to a crowded church" but i'd think they'd beat you for a while before they forgave you.

i dunno.

The Jan 95 AmSoft CD-ROM will be shipping December 23, 1994.
Cost is $39 plus shipping $3 USA, $5 Foreign. Over 20,000
files for amateur radio. Plus the CALLSIGN call book, and
AMCALL the new logbook from AmSoft that will auto log from
the CD for you. Over 1,350 Radio Mods. The latest HST images.
Over 700 Megabytes of Amateur Radio Software packed into 1 CD.

Version 4.0 Callsign will search for US & Foreign amateurs by
CALL or partial CALL
LAST NAME, FIRST NAME, or partial NAME
STATE, CITY or partial CITY
ZIP CODE or partial ZIP CODE
Create Avery label mailing lists
Create QSL address labels
When used with AmCall Logbook, will create your QSl contact information labels.

Help locate lost & missing children too. The complete list of
1,100 .gif images from the Heidi Search Center is constantly
maintained with up to the minute changes shown on the WWW at
halcyon.com. This CD is published every 4 months without delay
in JANUARY, MAY, & SEPTEMBER.

You don't have to listen to me, read what the authors say:

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 20/2330Z DECEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 20 DECEMBER AND FORECAST FOR 21 DECEMBER - 23 DECEMBER
---
1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 82/23

GOES satellite data for 19 Dec
Daily Proton Fluence >1 MeV: no data
Daily Proton Fluence >10 MeV: 1.2E+04
Daily Electron Fluence >2 MeV: 1.9E+07 (normal)
X-ray background: B1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
21 Dec 22 Dec 23 Dec
Activity Low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 21 Dec: 80/20

---
2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: mostly unsettled.

Estimated Indices : A K Observed A Index 19 Dec
Learmonth 13 3233 3332
Fredericksburg 8 7
Planetary 6 6

Observed Kp for 19 Dec: 0323 2111
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
21 Dec 5 Quiet
22 Dec 5 Quiet
23 Dec 30 Mostly active, with minor storm levels possible
during the local night.
COMMENT: An increase in geomagnetic activity is forecast for the
period 23-24 Dec, due to a coronal hole.
---
3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
20 Dec normal fair-normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
21 Dec normal fair-normal fair-normal
22 Dec normal fair-normal fair-normal
23 Dec fair-normal fair poor
Conditions are expected to become degraded in association with
forecast geomagentic activity.
---
4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
20 Dec -3 15-20% depressed 00-01UT, blanketed by Sporadic E
layer 02UT, and near predicted monthly values
03-06UT. Values at Canberra were near predicted
monthly values 05-16UT and 15-30% depressed
thereafter.

Predicted Monthly T-index for December: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
21 Dec 5 Mostly near predicted monthly values, with
occassional daylight depressions of 10-20%.
22 Dec 15 Near predicted monthly values
23 Dec 15 Near predicted monthly values
COMMENT: Propagation conditions are expected to be fair to normal
today. Geomagnetic activity forecast for 23-24 Dec is likely to
degrade local propagation conditions over that time.

Jonh Landis, AA3HN mentioned a New York club with the call like
N23 (oops) N2SEX. He's probably thinking of W2SEX, which
belongs to the Amateur Radio Association of the Tonawandsa
near Buffalo NY. You can't miss that call on Field Day. I've
operated with them years ago and you wouldn't believe the comments
the call gets. It's like having an extra 3db!

Speaking of bad calls... a local got N2ZIT. My advice was to
send it back, but so far, he's kept it. Must have a good
sense of humour!

How about short calls? Not many shorter than mine (AE2T) which
is great on CW, but some people just can't get it. They always
think they're missing something and only have half the call!!
Anyway, I think I'll keep it....

73 de Al AE2T (Always Eager 2 Talk... Always Eating 2 Tomatoes...
no end of phonetic possibilities!)

For some reason, whenever I toss my call on a repeater (mostly where people already know me), the call is returned as w1yz. Still can't figure it out. I strongly believe I say it clearly enough (and relatively slow, too).

What "better" technology is needed than a receiver?

|>> Why have so many generations of hams not given a second thought to
|>> standing by for a short period of time to allow our national amateur
|>> organization provide us with timely information and code practice on
|>> published frequencies, yet this generation `despises' this practice?
|>> The W1AW bulletins are for the good of *all* amateurs, ARRL members or
|>> not; in no way are they self-serving.

How do you know that "so many generations of hams not given a second thought"?

|>
|>Well, not all of us despise the W1AW policy. The league provides a valuable
|>service here, much more so in my opinion than your typical "bitch and whine
|>slash rainin' here today" roundtable net on the low bands. The bulletins
|>are good for emergency info. The code practice is a great
|>resource. Listening here, making tapes, and listening while commuting is how
|>I got my speed to 20 and above to earn an Extra ticket in less than 6 mos from
|>having no license.

Where do the regulations make "value" allowances other than for the preservation of life and property in emergency transmissions? Are you suggesting that because you judge something more valuable that it should be allowed, yet the identical practice when utilized for something you don't deem as valuable is disallowed? Seems a little parochial to me.

|>What amazes me is that some (ahem... operators?) actually willfully jam these
|>freqs. There is enough room in the HF bands, at least for a CW operator, to
|>find another spot to operate.
|>
|>Thank you, W1AW, for continuing this fine practice!

Practice of? I have nothing against W1AW's bulletins, in fact I enjoy them. Yet I don't see how their practice of transmitting whether a frequency is in use or not is a "fine practice".

|>> I have never seen reference to the ARRL stating `we own these freqs';
|>> those frequencies are open to anyone 23 hours per day.
|>>

|>> I wonder what these new hams do when a weekly net comes up on their
|>> favorite repeater - jam it?

Ahh... need to cast this into a new/old ham debate, eh Jeff? What does old/new have to do with it? And with respect to a weekly net coming up on a repeater, at least in this part of the country, the net control operator politely asks to use the repeater. I have yet to hear them just start playing the RAIN tape or something similar right on top of another QSO. Certainly W1AW could follow the same considerate rules of operation (which it promotes for everyone else).

The issue is what's good for the goose should be good for the gander.

73,
Todd
N9MWB

1/8W or 1/4W resistors should do. The circuit doesn't draw much
current (as it sits on the serial port, it *shouldn't*!)

> 2. I could not find a TL701 op amp but found a TL702, can I use

No, that should be a _TL071_. It's a single op-amp whose pinout will
match the 741. For that matter, if you've a 741 around, you can use it
to test the circuit until you get the better '071. After three years,
I've yet to change the 741 in mine for the other chip.

>

Well - my advice would be to try linking K1MAN somehow with drugs -
THEN you might suceed in bringing FBI in. I think the whole passage is
disgusting... Is this an amateur radio spirit? Or 1984 spirit?
On the other hand it's too bad that with or without 4th amendment brought in
there is no licence class that will allow ANYBODY to go with broadcasting,
with some resonable or nil fee for that. There is no LEGAL way for a person
to do any broadcasting. This is not fare - this is the way any government
likes to see the world - and I would be not surprised if in some near future
the new technology resort for broadcasting - such as Internet and like would
be considerably restricted...

Hello Don,

I would be more then happy to support you and the fellow hams that are on 3.975. I have been doing a lot of listening around looking for a "home". My wife and I are both hams here, but my wife only enjoys packet. We have 5 children and at least 2 of them have shown any interest in amateur radio. Please listen for us on 3.975, we will be listening in and introducing our selfs.

Hope to hear you then!

>have a letter of authority to use their radio systems.

Well, Bob, I have read parts 90, 97 (and a few others), and I never saw
any definition of what consitutes an emergency for this use. I have
on many occasions used amateur gear to contact various public service
agencies, in emergencies, and have never been called on it.

The key is what is an emergency? I tend to follow the dictionary
definition, of a state of increased concern. I don't concern easily,
so I don't abuse it.

However, in an emergency, under the FCC rules, you can do whatever you
need to do. Realistically, if I needed help and the only way to get it
was to use the wrong equipment on a frequncy I'm not licensed for, so what?
The very worst that would happen to me is that I might (and it would be
a long, long shot) forfit the equipment, more realistically I'd get a

letter from the field engineer asking what I did and why. Which, I would answer, and that would be it. Even if it was an offense on part with (insert felony of choice here), if I needed the help, I'd still do it. It's my (or someones I'm caring for) life.

KA3FFY's post shouldn't have been shouted, and he seems a bit overanxious to do it to me, but what the heck. He's (legally) right (unless you can quote chapter and verse showing that an emergency has to be declared for the emergency communications rules to take effect), and as far as I'm concerned, he's morally right too.

This isn't a flame at all, if there is a subtle nuance of the FCC regs that I'm missing, I'd like to know about it. But, I think you're reading more in there than there should be.

I'm in singapore, but am not a ham (yet).

Most of what orv@micom.com writes is true - I'm not sure about the 6 mths
residency, as I'm a citizen here, and it doesn't apply to me - but what I
_do_ know if that if you're not a citizen, they'll want to check your
passport on when you entered Singapore.

VHF activity has been picking up after a new class of licence (restricted -
No code) has been introduced. It allows the licencee on the 2m band.

Xtal controlled rigs are true - but I believe this applys for VHF bands and
the like - I think there should be synth rigs for HF.

We only have spot freqs on 2m & 70cm, as I am to understand that they're
assigned to the amateur service on a secondary basis. You might like to know
that on VHF/UHF, there is a 10w max o/p power (erp) restriction.

Spot freq for the VHF amateur band (144-146Mhz)

144.050 CW only 144.475 SSB & CW only
144.600, 144.900 SSTV, Data, RTTY, FAX.
145.500, 145.550, 145.575 FM Simplex Channels.
145.625(Tx), 145.025(Rx) SARTS' Repeater Station.

You'll normally find activity on the FM channels & the repeater - I'm not
aware of anyone using other modes on the other spots.
You'll find a DX cluster and one packet bbs on 145.500 & .550 (I forget

which is which)

Spot Freqs for UHF amateur band (430-440Mhz) - On a Sec Basis

432.000 CW Only 432.200 SSB & CW only
432.600 RTTY, FAX 433.625, 433.650 FM Simplex Channels.

Note: From my understanding, no amateur is allowed to use the UHF bands unless written permission was obtained from licencing.

Hope this info was of use to you.

Tried them both. But LA (the big orange, not Lower Alabama) is, thanks to
the California PUC, the most expensive (for users) cell market in the US.
More phones than everywhere else, too. And roaming? I could go roaming
in any other service area and it would be less than my basic charges. I
have one phone on the shelf rate not (for emergency workers), $15/mo, 20
min/month free, and about a buck/min over 20 (unless I can document a real
emergency, then it's usually a no-charge). Luckily, I was able to connect
to the I'net via my laptop and cellphone after the Northridge Eq, and
start some coordination activities. My power was out for about 3 hours, and
my phone for 1.

# 4616. QRP forum--mailer or newsgroup?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-21 01:46:47 UTC
From: Mike.Czuhajewski@hambbs.wb3ffv.ampr.org
Message-ID: <1994Dec20.204647.13457@wb3ffv.wb3ffv.ampr.org>
Source record: 254596

Attention former subscribers to the QRP-L mailing list only:

I recently took a private poll on the QRP mailing list, on a non-binding, unscientific basis, totally "for fun", whether they would prefer to have it as a newsgroup or stay as a mailing list. (This has been a recurring topic almost since the mailing list was started, and continues to simmer.)

The replies have slowed down pretty much, with it running about 3 to 2 in favor of staying as a mailing list. I later realized that the basic premise was flawed; I was only asking the QRPers on the mailing list if they preferred a mailer, when I should really be asking _everyone_ with an interest in a QRP forum what form it should take.

Asking the list alone does not reach everyone with an interest in a QRP forum, since there have been quite a few "defections", with a large number being attributable to the loss of the "digest" function when the mailer moved from think.com to netcom.com. Many people signed up for the mailing list and later unsubscribed, with the vast majority apparently being due to the amount of traffic, losing important e-mail scattered among QRP e-mails, having to pay by the e-mail byte received, having the boss cast an evil eye for reading personal mail while at work, and various combinations thereof. (One person recently stated that his boss told him to unsubscribe!) They enjoyed the QRP forum but couldn't handle the implementation of it as a mailing list.

To be honest and above-board and get a truer, less skewed feeling of the wishes of _everyone_ interested in a QRP forum, I must also ask those who have unsubscribed which they prefer, mailing list or newsgroup. (I would assume that the vast majority of those who have unsubscribed did so because of problems with handling the e-mails. Many made comments when unsubscribing, and those were all along those lines.))

I will make the assumption that a substantial number of unsubscribers still read rec.radio.amateur.homebrew and/or r.r.a.misc, so this is my only way to contact some of you. I hereby solicit your vote: do you prefer a QRP mailing list or newsgroup?

No comments required, but if you wish you can tell me why you unsubscribed--didn't like the topic, too much traffic, etc. You don't have to include any comments on the merit of a mailing list vs. newsgroup--there have been so many of those comments in the past that it's almost unheard of to find a truly new position or fact. All the pros and cons on both sides have been well aired; I'm not the judge

and jury, so you don't have to try and convince me either way. All I want is a vote for one or the other. (Any comments which trickle through will not be retained or recorded.)

To be accurate, this vote should only be among people who were once subscribers to QRP-L and later unsubscribed, and thus have experienced the problems first hand. Please do NOT cast a vote if you were never a subscriber to the mailing list, even if you are interested in having a QRP forum in some form.

Please address your vote directly to me, via private e-mail, and do NOT send a copy of it to the QRP mailing list or to the newsgroup where you find this posting. (This is in accordance with standard netiquette.) The results will be posted later, both on the mailing list as well as r.r.a.h and r.r.a.m. The results will include two tallies--the vote from just the mailing list subscribers as well as the vote from everyone involved.

(A final reminder, this is a private and personal poll, the vote is for informational purposes only, it is a straw poll, is completely nonbinding and unscientific, for my amusement only [do I have enough disclaimers? :-) ] and will NOT result in a newsgroup being created if the vote is favorable. If someone ever submits a formal request for a formation of a QRP newsgroup, a formal call for votes will be submitted by some official source.)

I have a cabinet rack in good condition for sale. Dimensions are
Width 23 inches
Height 20 inches
Septh 16 inmches

This will take several standard 19 inch panels. It is standard commercial equipment. The current price in the Allied catalogue is about 150 bucks. It's your for 25 dollars as I wnt to clean up stuff I'm not using in the shack This is for a local person as you will have to get it. I'm in Elmhurst, Queens and I can be reached byu Email at herbie@dorsai.org or on the phone 718-651-2798. This is a good deal for someone who wants to put some of his rack mounted stuff in one cabinet. Tracy W2oqk

Great! I already have the twin-lead J-pole... I've made several. An ounce or 3 of lead eliminates the need for the slingshot... plus, we'll have fishing poles.. I can CAST a weight over the treetops. I have to look a a scaled map to see how far Orr, MN is from the depths of Quetico (Canada), and get an idea of the topography... plus I will never know for sure about the repeater coverage viability until I actually TRY it. I guess I'll ask the park rangers about radio coverage (of any kind) within the park. BTW, isn't it legal to transmit on a service one is unlicensed for, in fact, ANY freq, in a true EMERGENCY? ( I have extra amateur, but I'm thinking Ranger repeater or such)...????

KANATA FIRE DEPARTMENT EMERGENCY COMMUNICATIONS PLANNING

The Kanata, Ontario, Fire Department has joined forces with local Amateur Radio operators to provide for emergency communications needs. The Kanata Fire Chief initiated the move that resulted in a fully operational Amateur station located in the fire hall. Kanata firemen and Amateur volunteers worked together to install the new station. In the event of an emergency, local Amateurs will provide communications for the Kanata police, fire department and relief organizations.

According to an item in the Ottawa Amateur Radio Club bulletin, the fire department radio station was installed so that if, and when, a disaster occurs, designated volunteer Amateur Radio operators could proceed directly to the fire station and begin providing immediate communications assistance. The station is equipped with a Kenwood 702A transceiver working from a Diamond

X300 antenna.

In addition to the many Amateur Radio repeaters in the Ottawa-Carleton region, the local Emergency Measures Unit recently commissioned a new Amateur Radio repeater (VA3EMU), for the exclusive use during an emergency. One of the many features of the new repeater is the ability to interconnect (autopatch) with the local telephone network. This feature will allow volunteer Amateurs to communicate with any of the services the City or fire department may require in the event of a disaster in Kanata.

CALGARY EMERGENCY HAM ATV BIG HELP TO THEIR FIRE DEPARTMENT
From Calgary ARA Key Klix

Key Klix reports that the Calgary fire department has been so impressed by what the Ham ATV operators have been able to do for them that they have decided to call them out for the next major fire. A 24-hour call out sheet has been organized by the club.

HIGH SPEED CODE ANYONE?

The World Wireless Beacon reports that Pacific Coast high speed practice skeds are currently running on 3523 and 7023 MHz, Mondays and Thursdays at 0330 UTC.

FROM THE INTERFERENCE DEPARTMENT
From the ARRL News Letter

Hams in the Omaha, Nebraska area helped the local office of the FCC in chasing down some pesky electromagnetic interference. Owners of Sears garage door openers were able to close their doors but not to open them. The FCC said that several local Amateurs who had heard about the problem assisted the Commission staff in locating the new air-to-ground communications system at Offut Air Force Base, operating on a frequency too close to the door openers' frequency. The Air Force contractor agreed to find another frequency.

STILL HOPE FOR PEACE BETWEEN JORDAN AND ISRAEL

The recent thawing of relations between Israel and Jordan was apparent by the appearance of Jordan's King Hussein, JY1, on an Amman, Jordan repeater, according to the Israeli newsletter HaGal. When Jonathan, 4Z9FHB, called CQ, JY1 answered and proceeded to work the young Amateur.

HaGal also reports that discussions have taken place between the two countries' Amateur Societies, on "technical cooperation" and "plans for a very special DXpedition, yet to be announced. A recent report indicated there were now 11 VHF and 4 UHF repeaters in Jordan.

HAM NEWS ABOUT CHINA
From Calgary ARA Key Klix

At the IARU Region 3 Conference in Singapore, the delegate of the Chinese Radio Sports Association, BZ1HAM, submitted a document which gives the prefix line-up in China as follows:

B VHF/UHF stations and contest stations on the mainland
BA Class 1 individual home stations
BD Class 2 individual home stations
BG Class 3 individual home stations
BO Jin Men (Quemoy) area of Taiwan
BR Repeaters
BSOH Huang Yan Dao (Scarborough Reef)
BT Special events stations
BV Taiwan BV9P Dong Sha Dao (Pratas)
BY Club stations
BZ Personal calls of club station operators, to be used at club stations only.

There are now 33 old-timers who have been issued permission to operate from their homes with the BA prefix. On July 17, China conducted an examination in 28 cities for the Class 3 individual home station license. About 1400 people took the examination and about 1000 are expected to pass. The main problem for most of these Amateurs will be obtaining equipment. Imported ham gear is too expensive for most of their pocketbooks and ham gear is not made in China.

As of June, 1994, there were 99 club stations (BY) in China. About 200 Amateurs currently hold the BZ prefix call sign enabling them to use personal calls when operating from club stations.

Key Klix credits DL6RDE for the above report.

EC UNABLE TO PROVIDE WEATHER WATCHER TRAINING

The Leamington, Ontario, ARC News Letter recently reported that 1994 had been a quiet year for the Canwarn Weather Spotters. One incident did involve severe weather damage to the antenna system located at the Weather Office.

Environment Canada, without the financial resources to pay travel and overtime staffing expenses, is reportedly unable to assist with local volunteer training. The club news letter says that discussions are underway to find volunteers from the Weather Watchers to conduct the course themselves.

Weather Watchers are trained to identify potentially dangerous locally developing weather conditions that could threaten life and property. They assist Environment Canada by reporting threatening conditions so that warning can be issued to the public if necessary.

NORTH SHORE HRC FIRST IN CANADA IN EMERGENCY EXERCISE

Members of the North Shore ARC placed first in Canada in the "Radio Club" category in a continent-wide exercise of emergency communications on the weekend of June 24, 1994. The North Shore club operated from the quarry site at the top of Cypress Provincial Park in West Vancouver.

George Merchant VE7CHU, Club President, comments, "Our Field Day site is ideal for radio contact with the rest of North America because of height and antenna direction, and probably has the most spectacular view of the thousands of other sites in the contest."

The annual exercise is designed to test the skills of Ham radio operators in setting up an emergency communications facility, without normal power, as quickly as possible, in the event of disaster. The competition is divided into several categories depending on the number of radio transmitters, power levels and source of power.

The North Shore Club says they have managed to improve their contest score consistently since the Club was formed 10 years ago. The American Radio Relay League recently confirmed the NSARC first place finish, narrowly beating the perennial winner, the Ottawa Valley Amateur Radio Club.

RAC MAILING ADDRESS CHANGE

Radio Amateurs of Canada, Administrative Offices is located in Kingston. The postal box has been closed and mail is now being delivered directly to the office. Please address your mail to: Radio Amateurs of Canada, 614 Norris Court, Unit 6, Kingston, Ontario K7P 2R9.

SIX HAMS ABOARD LOUIS ST. LAURENT ON TRIP TO NORTH POLE
Partly from the York Region Splatter

Last month in this Bulletin, we reported on the recent travels of the Canadian Coast Guard icebreaker, Louis St. Laurent, and the American Coast Guard icebreaker, Polar Sea, to the North Pole. Our headline read, "CW only reliable means of communications from the Pole." The source for our short item came from a Canadian Press item that appeared in the Thunder Bay Chronicle- Journal.

The ships reached the Pole on Monday, August 22, 1994 and were there for approximately 24 hours. According to the CP report, "For most of Monday, the only communications with the two ships was by Morse code because electromagnetic interference from the Pole made voice transmission impossible by either radio or satellite telephone."

Now, for the real story. Aboard the Louis St. Laurent were six Canadian Amateur radio operators. They included: Bill Falconer VE1VCB, Phil VE1CGT, Bob VE1BFX, Ken VA3KA, Ivan VE2YGB and Gord VE1VCS. The report in the York Region Splatter comes from information supplied by Bill Falconer. Incidentally, the ship's Amateur radio call was VE0MBJ.

"In the evenings", Bill reports, "we would go on the Amateur bands and work DX. One or two CQ's with the VE0 call and we had a pile up. I did mostly CW, and Phil would come up later and work SSB."

The station ran an ICOM 781 into a homemade dipole. The only band open while in the Arctic was 20 metres, and the window into North America was only a few hours a day. "As the window was around 1200 to 1400 hours our local time, we used it to run phone patches for the crew on CFARS", Bill said. "We had a lot of support from CFARS operators all across the country, but four operators were with us practically the whole way. They included, Ralph Campbell VE1QU, Ed McGillivray VE1EB, Al Oldfield VE3ANO and Vic Williams VE7UZ." Bill says, "there were daily skeds and they didn't miss many days."

"The morning we got to the Pole we started at 0530 our local time and ran 40 patches in a three hour period," Bill explained. "Anyone who wanted to call home could. We were really lucky, because the band had been very poor the previous two days without patch quality. This morning, the band was wide open."

"The time on the Pole seemed to go fairly fast", Bill said. "Phone patches for the crew were the extent of our hamming for the day. We didn't work one DX contact, which was a real shame. After three or four hours doing phone patches, we had a baseball game with the Polar Sea and won. Some people were skiing. A friend and I had mountain bikes so we went for a ride around the Pole. Others went for a polar swim. There was skating, kite flying, etc."

Bill continues, "The sun never set the whole time we were there, so if you couldn't sleep and woke up at 3 a.m., you could always go outside and join in whatever was going on."

The joint Canadian/American expedition involved 60 scientists with the aim of understanding the Arctic in the context of global change.

Thanks to David Adams VE3HBF, for his report in the Splatter for this item.

AN MP'S LETTER RE EMCAB-2

"Dear Mr. Harrington:

"I have been informed by my colleague, Mr. Ian McClelland, MP, the co-critic for the Department of Industry, that he has taken the opportunity to read the departmental bulletin and agrees with many of the concerns raised by amateur radio operators. The department of Industry must push to have a degree of responsibility levelled at the manufacturers of electrical/electronic products. Once the government has provided a specified level of immunity all manufacturers must meet, perhaps then it can begin to consider the role of the consumer in ensuring a desired level of emission is complied with.

"Mr. McClelland has advised me that he does not believe the EMCAB-2 bulletin deals realistically with the problem of emissions and has addressed this concern in a letter to the Minister responsible. Please be assured that as soon as a response from the Minister has been received, I will contact you with the details of that response.

"Once again, thank you for bringing this matter to my attention.

Sincerely,
Ken Epps, MP, Elk Island, Alberta"

IC ANTENNA TOWER POLICY CLARIFICATION

The long awaited Industry Canada policy concerning antennas and antenna structures is expected soon. The delay is over the possible impact of new legislation governing environmental health factors and the limits of exposure to radio frequency fields. Our November Bulletin reported that the new policy

was expected to spell out a requirement that prior to erecting an antenna tower, Amateurs would first have to consult with municipal authorities.

Contrary to our previous report, Industry Canada, not the municipality, has sole authority over towers. However, IC has made it perfectly clear to RAC officials that it is in the best interest of the parties concerned, i.e., the Amateur, his neighbours and the municipality, that a consultation process take place. While consultation is not mandatory, "Good Neighbour Relations" can help to diffuse possible future confrontation.

Note this! IC does not look with favour on Amateurs who fail to consult with their neighbours.

FCC TELLS ZONING BOARD BASIS FOR DECISION WRONG
From the ARRL Letter, November 12, 1994

The chief of the FCC's Private Radio Bureau, Ralph Haller, has told the Hempstead, New York Board of Zoning Appeals that the town is wrong in trying to regulate an Amateur's antenna system based on interference caused to nearby consumer electronic equipment.

Here is what Haller told the board of zoning appeals: "It has come to our attention that the Town of Hempstead's Board of Zoning Appeals (Board) has denied Mr. Handen M. Nadel's application for a variance permitting him to maintain his Amateur radio station's antenna at a height of fifty-five feet (versus the thirty feet permitted by the zoning ordinance). According (to) the text of the Board's decision ... it based its determination largely on its finding that the 'proposed and existing antenna height of fifty-five feet' was resulting in interference to the home electronic equipment of Mr. Nadel's neighbors."

Haller then cites PRB-1 and what local authorities may do under its provisions. But, "They may not," Haller told the Board, "base their regulation of Amateur service antenna structures on the causation of interference to home electronic equipment, an area regulated exclusively by the Commission."

Haller cited the FCC's exclusive jurisdiction over interference matters and told the Board "there is no reasonable connection between requiring Mr. Nadel to reduce the height of his antenna and reducing the amount of interference to his neighbors' home electronic equipment. On the contrary, antenna height is inversely related to the strength ... of the radio signal that serves as a catalyst for interference. ...

"It is a matter of technical fact," Haller said, "that the higher an Amateur antenna, the less likely it is that the radio frequency interference will appear in home electronic equipment."

HAMMOND MUSEUM OF RADIO

If you are planning a visit to the Toronto area, give serious consideration to contacting Fred Hammond VE3HC, in Guelph and arrange for a visit to the Hammond Museum of Radio. Attention teachers: this would make a

great field trip.

Among the collection can be found a representative history of the development of radio equipment during the tube era. Spark gap transmitters, Marconi, Hammond, and other early makes of receivers are on display. Just about every piece of equipment Collins manufactured is represented and much of the collection is in operating condition. Two RCA broadcast transmitters have been converted to Amateur use and there are two Collins KW-1 1000 transmitters in operation at the museum.

Fred's collection of tubes ranges from peanut tubes through the Eimac T-2000 and a 50,000 and a 100,000 watt broadcast transmitting tube. Most of the tubes have their filaments lit which offers an impressive display. Microphones, speakers and a few early television receivers are also displayed.

Thanks to the Montreal ARC bulletin for reminding us of this important resource.

220-225 MHZ REMAINS AMATEUR EXCLUSIVE IN CANADA

RAC announced recently that, as a result of negotiations with Industry Canada, the 220-225 MHz band remains exclusive to the Amateur service in Canada. The IC decision was communicated to RAC President, J. Farrell Hopwood VE7RD, in a letter dated November 23, 1994 from IC's Director, Spectrum Management Operations, Michael Connolly. Mr. Connolly congratulated RAC on its effective representation on the 220 MHz matter.

Mr. Hopwood says that, "This was one of the first issues addressed by the Canadian Amateur Radio Advisory Board (CARAB), and RAC extends its thanks to Industry Canada for its co-operation and assistance."

"Canadian radio Amateurs are encouraged to make maximum use of this valuable spectrum allocation", Mr. Hopwood says. "Amateurs are free to make full use of 220-225 MHz as before, and should use the band in accordance with our band plan. Amateurs should be aware that due to re-allocation of 220-222 MHz in the US to land mobile services, for this part of the frequency, sharing and co-ordination arrangements in the border corridor is currently being negotiated between IC and the FCC and should be finalized shortly. Any such plan must be incorporated in Canada-USA treaty obligations. Amateurs will be notified when implementation is required."

RAC ANNOUNCES ELECTION OF DIRECTORS

RAC Secretary, Ken Pulfer VE3PU, on behalf of the election committee, recently announced that J. Fergus Kyle VE3LVO, Dennis Livesey VE7DK and David Panting VE4EF had been elected to the Radio Amateurs of Canada Board of Directors.

RAC President, Farrell Hopwood VE7RD said he welcomed the new directors on behalf of all Amateurs across the country. He encouraged them to be active and in-touch with clubs and in attendance at conferences and hamfests within their regions. Mr. Hopwood says that RAC "as a fledgling national society" has taken on some important and demanding roles and projects. He said, "We

are faced with some serious matters concerning resources, both human and financial. There are solutions to our needs, however, they are problematic and complex." He further encouraged active recruitment of new membership in RAC.

ARE YOU INTERESTED IN CFARS?

The Canadian Forces has created an organization called the Canadian Forces Affiliate Radio Service (CFARS), manned by licensed volunteer Amateur operators that help link people far from home with loved ones back in Canada. Thrill seekers, missionaries, scientists, the Coast Guard and our Military all know the value of CFARS.

CFARS stations operate on frequencies just below the normal Amateur bands. They use a different set of call signs (only 100 are allowed by IC), so the number of operators is limited and strategically located around the country for optimum efficiency.

Volunteer CFARS operators recently handled 450 patches to families across Canada during the Haiti crisis. Canadian scientists and Coast Guard staff aboard the Louis St. Laurent on her recent trip to the North Pole depended on CFARS for communications with family and loved ones at home. Canadian Medical relief troops in Rwanda, peace keeping troops in the Golan Heights, Yugoslavia and Croatia have all made use of CFARS services. If you are interested in monitoring CFARS, try 14.452.5 and see for yourself how Amateurs help our Armed Forces around the world.

Len Brewster VA3LEN, has offered to share more information on CFARS with interested Amateurs. His address is; R.R. #2, Chesterville, Ontario K0C 1H0.

RAC SECTION MANAGER ELECTIONS

Saskatchewan Amateurs will be mailed ballots for Section Manager elections Friday, December 16. Bruce Donovan VE5ND, and Joan Lloyd VE5JML, are the candidates.

Atlantic Region Amateurs can expect ballots for Regional Director elections before the end of the year. Bill Gillis VE1WG, and Stuart Harvey VO1OO, are the candidates. Be sure to exercise your right as a RAC member and vote for the candidate of your choice.

RAC WINTER CONTEST

The Radio Amateurs of Canada Winter Contest is scheduled for December 31, 1994. Contest hours are 0000Z to 2359Z. Amateurs all over the world are invited to participate. For complete contest details, check page 38 of the December issue of The Canadian Amateur magazine.

I scanned the last 200 or so post and saw no mention of new license times.

My wife took her tech exam on Dec 10th. Her VEs told her that this was the first exam they had given where, after she passed, wait 10 days and call the ARRL for her callsign. (Well, they DID screw it up. Thet told her to call the ARRL VEC. She did and they sent her to the 800 FCC number.) With her call and CSCE she could go on the air.

She called today and got it! 10 days! (Now I'm officially an OF. "Back when I got MY license, WE had to wait 8 (10, 12) WEEKS to get OUR licenses. These kids these days don't know how good they have it. [snort]"

|>You might be surprised that the Government agency has to declare the
|>emergency through a formal process involving the state or county office of
|>emergency services. You can't decide just because your friend has a broken
|>leg with blood gushing. that a disaster or emergency exists. Most
|>government agencies treat the medical aide calls as routine and in no way
|>an emergency

He didn't say he was declaring a "communications emergency" or any form
of disaster. In fact, Part 97 section 403 reads:

97.403 Safety of life and protection of property. - No provision
of these rules prevents the use by an amateur station of any means of
radiocommunication at its disposal to provide essential communication
needs in connection with the immediate safety of human life and immediate
protection of property when normal communication systems are not
available.

Sounds to me like the FCC intends one to use any means possible to save
a life. I suspect that to take a different stance would violate the
equal protection and due process clauses of the constitution. But again,
I'm not a lawyer. And if it were my friend, you can bet I'd use whatever
means were available!

73,
Todd

Thats more a problem of the phonetics, some people just have pronlems
to pronounce zero and sierra such that they do nou sound the same.
Than, using city-phonetics only partially solves the problem.

The funny-sentence-calls are all very nice on FM or else, when
you don't really need phonetics, and a real help on mobile.

But it's an entirely different story, if you have to understand
someones call in weak signal and noysy SSB if he thinks that
his special phonetics are the very best.

That's true for a solid-state rig. But not true for a tube rig like my FT-101. I have to retune completely when I change bands and sometimes when I go from one end of a band to the other end. I find the dummy load invaluable for this situation.

Wednesday Morning
December 21, 1994

Mason:

I can't help, but wanted to let you know that you're not the only ham to have had that thought.

As one of my "I need to do that" 'projects', my thought is to tap into the data lines between the LCD microphone and the FT-530, and see if the data format is simple enough to figure it out by watching on an oscilloscope. To really 'do-it-right' we'd need to capture some data on a protocol analyzer, but unfortunately, I don't seem to have one of those at home.

A week-and-a-half ago 'Texas Towers' (ham store in Plano, Tx) had "Yaesu Days", and I mentioned this very idea to one of the Yaesu guys there.

I wasn't really sure if he committed to anything, but he mentioned that some guys in the UK (maybe a Yaesu group there?) were working on a fancy computer interface, and I think the inference was that this was the sort of thing that they were trying to support. The Yaesu guy may have been in 'sales mode' (where there's an implied "disregard everything I say"), but I think that he was trying to show that there was some 'movement' towards improved computer-control of radios (I'd mentioned that the existing computer-interfaces, on different products, all use different protocols, and that it made trying to write one's own control programs very difficult).

Well, if he makes up "KA1CV", I bet I hear about it eventually. :-) Sooner or later the local hams will figure out that he is unlicensed. He will either make up a real unlikely call (W1AAA) or use a new call that will have a different name in the Callbook. There will usually be enough locals who take this seriously enough to want to report him, so this is a real risky proposition in most areas.

The FCC usually gets involved with these things when they are reported, and the fines are usually in the several-thousand-dollar range. Wouldn't it be a lot more fun for him to spend more time studying and passing the test?

By the way, congratulations on passing your test and welcome to the Amateur Radio world!

# 4642. Help with first HF rig

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-21 14:50:55 UTC
From: swider@washpenn.UUCP
Message-ID: <120@washpenn.UUCP>
Source record: 254634

I'm working on my first HF rig and I've run into a problem, I think. The rig is a TenTec Century 21 that feeds through a tuner to an attic dipole. The attic mount was a necessity at this point so a local ham recommended running a 100-foot dipole along the rafters. This ended up being closer to 110 feet when all was done. I finished installing the antenna last night and tried listening to several of the bands. 80m was alive and well with plenty of strong, readable signals, but that was about it. I tuned around for a couple of hours on the Novice portion of 40m and heard all the QRM from the broadcast stations, but no amateur stations. I was starting to think my radio had a problem on 40 until I listened below 7.100 and heard a number of stations, but they weren't as strong as those on 80. I listened on 20, 15 and 10 for short periods and heard nothing except static, but I expected that and didn't think much of it. The one that really bothered me was 40.

I guess I should mention that I set the tuner for the recommended starting points for each band.

After thinking about it, I realized that the dipole was closer to the correct length for 80. If I trim the antenna to be resonant for 40m would this correct my problem? How will this affect 80? I'm mainly interested in working 40 and 80 right now.

Thanks,
Rob Swider - KB3BFM

## 4643. Dog radio fence and amateur radio, Compatible?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-21 14:54:02 UTC
From: David_Bourque@UB.com
Message-ID: <9412211454.AA6958@smtp.UB.com>
Source record: 254630

I am considering the purchase of a radio fence to help contain my new dog to my yard. If you don't know what this is then please don't read any further. My question is does anyone have any experience or knowledge about any interference these devices may cause or be susceptible to amateur transmissions? I would hate to install this thing and find out that everytime I transmit on one of the amateur bands that my poor dog gets zapped. Or that I can't use the amateur bands because the device is on and it blows away the HF bands. Anyone know what frequency these devices operate on? I operate all bands from 160 to 70cM. Any help or comments would be greatly appreciated. Thanks.

Your friend's idea is not new. "Boot-legging" has always been
a part of amateur radio. But it is rather difficult to get away
with for very long.

He is definitely wrong about the "nobody...would know" comment. Amateur
callsign assignments are public information and printed in callbooks.
These days they are even available on Internet from callsign servers.

If he understands the callsign issuing sequence he might be able to
make a callsign that he could claim is too new to be in the callbooks,
but the would only work till the next edition is out or until he
ran into the person who it was actually assigned to.

If he makes up a callsign that doesn't cause immediate suspicion
and if he uses good operating practices he might get away with it
for a few weeks, maybe even months. But someday someone is going
to look up the call and find that something doesn't match.

The most likely repercusion is that once everyone in his area finds
out he is a bootlegger no one will talk to him anymore. There
have been a few reports in QST in the last year or two of people
making illegal use of amateur bands getting multi-thousand dollar
fines from the FCC. So this can happen to him, too.

73,

Gary

>need to do. Realistically, if I needed help and the only way to get it
>was to use the wrong equipment on a frequncy I'm not licensed for, so what?

Part 97.403 Defines emergencies as those conditions where it is *essential* to provide *immediate* communications to prevent imminent loss of life or to obtain immediate protection of property, and no alternative solution is possible. The classic example is a ship sinking with inadequate lifeboats in a raging storm hundreds of miles from shore with all normal marine communications equipment out of service. It doesn't cover having a flat tire on the side of the freeway, or simply being lost in the woods. It would cover hanging from a frayed rope off a 500 foot cliff with a grizzly bear chewing on the rope. The threat to life has to be both *immediate* and *unavoidable* for violations of Part 97 to be waived.

All Part 97.403 does in those cases is *waive* any penalty that you might otherwise incur for operations that would normally violate Part 97 rules, IE you could run 10 kW if you had to, or operate voice in a CW band segment, as examples. It does not give you blanket authority to operate in other services, nor does it grant blanket immunity from prosecution under other statutes or regulations, IE you could still be prosecuted under local statutes for "interfering with an officer" or be sanctioned for violation of Part 90 licensing or Type Acceptance regulations under FCC jurisdiction, if you fired up on a police dispatch repeater with your modified ham rig.

>Well - my advice would be to try linking K1MAN somehow with drugs -
>THEN you might suceed in bringing FBI in.

No, that would bring in the DEA. They'd bust down the door to his neighbor's house, ramsack the place, and terrorize the inhabitants then leave without a word of apology. Better, just drop a hint to BATF that he might have a shotgun with a 17.9 inch barrel. That'll at least get his wife and kid ambushed and murdered. Or hint that he may have an unregistered autosear, that'll get his church burned and all his friends and family murdered.

Remember, those horse trailers pulling up in your yard aren't likely to be bringing you a pony.

a TR-2200 has an odd 3 conductor power connector on it - triangular in shape and i've not seen it anywhere else. more like the molded connector you'd see on the appliance end of a boom box or tape recorder but smaller and unique.

i'd think he'd have to change to a more commonly available connector these days.

Mines OK, but my partner was very annoyed with the FCC when she got licensed.
She took a Tech class, oriented towards no-code, for emergency services, but she decided that learning code was a proper part of getting a ham license, so she learned the code, and passed 1A.
Several other people we know passed the test at the same time, without code. My partner got KD6HXY. Our no code friends got KD6IAA, and similar calls.

Just a long shot, Stan, but YYZ is the airport code (baggage tags etc.)
for Toronto Pearson International Airport. Rush, being a Toronto-based
group and where lead singer Geddy Lee lives, perhaps just tossed it into a
song because they were seeing these tags on their bags so much.....

I think what you may have done is set the VFO range. Look in the manual
and see how to reset the VFO (not the whole processor or memory!!!). My
TH78A has done what you describe a coupla times for no apparent reason.
All of a sudden, the VFO wont let me go above or below some seemingly
random frequency. Resetting the VFO (ONLY!! dont blow the whole memory
if you can help it...) may solve your problem.

Hello Folks,

I was wondering where I would get some info about Homing Devices? Since most of you may be involved in some kind of pet-projects at home, I thought I will pose this question to you.

I am interested in a device which includes a set of transmitter and a receiver. I am looking for a 100-200 meters range and it should be preferably radio based technology. The receiver should be able to track down the transmitter from a distance. I checked all the local and Indy stores for this kind of device, but I am out-a-luck.

If any body has any pointers (I am also willing to build it on my own), I would be greatful to you. Any pointers to Electronics Projects Book will also be of great help.

Thanks once again in advance for any kind of help.

He is dead wrong. It is illegal, and a violation of Federal law at that. The FCC has been getting more and more aggressive lately in tracking down and prosecuting pirate operators. Tell your friend that he's just begging for trouble.

>so I don't abuse it.

I believe the FCC definition is immediate threat to life, limb or property. As I understand it, this means danger of significant, permanent harm to a person's body or property. In the absence of other factors a broken arm or leg probably wouldn't qualify, suspected spinal injury would. If your house is about to burn down that would qualify but I doubt they would see danger to one window as an emergency.

And remember, to get the exception you need an absence of other feasible means of making the same communication. If a landline or ham repeater with emergency autopatch is available to you don't go using police frequencies.

Well, in my area, southern Ontario (Canada). We live in a VERY dense network
of cellular phone towers. I could easily see how people might want them
in an emergency. There are so many towers, that you could probably lose half
of them whichout much problem. However, they are limited to 832 channels. In
busier times around here, ie: after work, or in a blizzard, ALL the channels
are in use and you may call several times before it goes through.
Were you to drive as little as an hour north of here, you won't see another
cellular tower from here to the Soviet Union going over the polar route.
anywhere up north, I'd take a ham radio any day!!

Scott.

This is ridiculous. I can't believe that people are actually discussing this topic.

Amateur Radio is a hobby. The LAST thing we need are MORE people who don't give a damn about amateur radio but just want cheap reliable communications. The 2m ham band is NOT a repository for people who are tired of the noise on the CB, it is for people who are interested in radio a medium of communication.

Finally, it is illegal to use amateur radio to circumnavigate a wireline carrier....i.e. you can't use an amateur phone patch to avoid long distance charges etc.

Whats the bottom line ? If you are interested in amateur radio.. get your ticket and join a worldwide fraternity and by all means use your HT in an emergency. If you just want an electronic security blanket... go cellular and leave the ham bands to the others.

Finally, save your flames; this is my PERSONAL opinion. I am entitled to one, besides...you asked.

73,

Mark

# 4661. FTP sites for MODS to download from ... pleeze

Newsgroup: rec.radio.amateur.misc

Please send a list of FTP sites where I can get radio mods... I lost my list. Thanks !!!

## 4662. Got a catchy mnemonic for AA9IF? Habout N9TCE?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-21 20:38:59 UTC
From: Ed Gordon <U29255@UIC.EDU>
Message-ID: <19941221.220142.407099.NETNEWS@UICVM.UIC.EDU>
Source record: 254651

If you can think of a good mnemonic for IF or even AA9IF, I'd love to hear it. My XYL's call is N9TCE. She is mainly a Mom now, but also teaches art classes. I have a background in computers and medicine (besides ham). We called her The Cutting Edge and The Child Expert (had two now). More?

# 4665. Yaesu FT-900 Mod Wanted

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-21 21:17:05 UTC
From: "Bill.Nadzam" <bgn00@juts.ccc.amdahl.com>
Message-ID: <NEWTNews.5726.788048772.bgn00@LUMINA.ESS-OPS>
Source record: 254654
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

Does anyone out there in Cyberspace know how to MOD the Yaesu FT-900 for expanded Transmit? I have a 3rd world two meter Xverter that I have working on the FT-900, but need to be able to transmit from 26Mhz to 30Mhz to get the entire two meter band.

Right now All I can transmit on is from 28Mhz to 29.999Mhz. This gives me coverage from 146 Mhz to 147.999Mhz. I know that HRO sells a Blue colored MOD book which claims to have it in there. I guess I'll have to buy a copy if there isn't a person out HERE that knows how, but it is $20.00. That seems a little steap for one little MOD page.

Please Help,

# 4666. Which Sound Board - Amateur Radio Apps ????

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-21 22:54:54 UTC
From: randyh@gvgadg.gvg.tek.com
Message-ID: <3dabnu$h14@gv-gate.gvg.tek.com>
Source record: 254443

I plan on getting a sound board for my PC. My first thoughts were to get a SoundBlaster 16 and not worry about being SoundBlaster compatible. Since the Discovery Kits (which contain the SB16) are out of stock everywhere, I thought I would ask some advice of the net. I also need CDROM drive too.

Which sound board is most supported by amateur radio applications?

I heard that there is software from TAPR that works on soundboards. Could someone please fill me in on this?

What applications are available to run with the sound boards?

Thanks

Randy

SB QST ARL ARLB100
ARLB100 Penalties in VE fraud

Penalties in VE fraud

Two former volunteer examiners in southern California have surrendered their amateur station and operator licenses in an examination fraud case, and a third has agreed to a settlement.

Amateur Extra Class licensees Robert L. Flores, N6WPQ, and Rose Marie Flores, N6WPR, both of Santa Monica, California, faced an FCC order to show cause and suspension order from September 1994, in a case involving examinations conducted in August 1993. The FCC alleged that the VEs willfully signed VE certificates and Certificates of Successful Completion for persons who did not actually take exams.

The FCC also said that the VEs misrepresented material facts to the Commission.

The third volunteer examiner, Amateur Extra Class licensee James B. Williams, AA6TC, of Wilmington, California, agreed to a one-year suspension of his operator license and a ''voluntary contribution'' of 500 dollar(s) to the US Treasury. Williams also agreed to cooperate fully with the FCC's Private Radio Bureau's investigation of possible additional fraud in amateur license exams.

The licenses of Robert L. and Rose Marie Flores have been canceled.

# 4668. QSL route for UO4OF?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-21 23:01:56 UTC
From: eckman@eos1.larc.nasa.gov
Message-ID: <3dac54$9du@reznor.larc.nasa.gov>
Source record: 254657

I'm looking for a QSL route for my only 10m Moldovan contact
made in January 1992 with UO4OF, Vic in Kishinev. I found no
listing in the 1993 International callbook and the new 1995
edition has few listings for most of the CIS republics.
I sent a card via the bureau over 2 years ago, but hold out
little hope of receiving a reply from the route.
If anyone has QSLed this operator, I would appreciate an
address or manager. Thanks in advance.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 21/2330Z DECEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 21 DECEMBER AND FORECAST FOR 22 DECEMBER - 24 DECEMBER
---
1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 82/23

GOES satellite data for 20 Dec
Daily Proton Fluence >1 MeV: No data
Daily Proton Fluence >10 MeV: 1.1E+04
Daily Electron Fluence >2 MeV: 4.2E+06 (normal)
X-ray background: B1.3
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
22 Dec 23 Dec 24 Dec
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 22 Dec: 82/23

---
2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 20 Dec
Learmonth 5 2222 2111
Fredericksburg 7 9
Planetary 5 6

Observed Kp for 20 Dec: 2222 2222
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
22 Dec 5 Quiet
23 Dec 30 Mostly active, with minor storm levels possible
during the local night.
24 Dec 25 Active
COMMENT: IPS Geomagnetic Warning 12 was issued on 21 December and is
current for interval 23-24 December. An increase in geomagnetic
activity is forecast for the period 23-24 Dec, due to a coronal hole.
---

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
21 Dec normal fair-normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
22 Dec normal fair-normal fair-normal
23 Dec fair-normal fair poor
24 Dec fair-normal fair poor

---
4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
21 Dec 25 near predicted monthly values

Predicted Monthly T-index for December: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
22 Dec 15 Near predicted monthly values
23 Dec 15 Near predicted monthly values
24 Dec -10 10 to 20% below predicted monthly values
COMMENT: IPS HF Communications Warning 15 was issued on 21 December
and is current for interval 24 December. Sporadic E was observed
at times yesterday and is expected again at times today. Propagation
conditions are expected to be fair to normal.

# 4672. Whither the FAQ? (was Re: HAM radios)

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-22 00:01:21 UTC
From: pschleck@gonix.com
Message-ID: <pschleck.788054481@gonix>
Source record: 254660

In <1994Dec18.220222.23179@ke4zv.atl.ga.us> gary@ke4zv.atl.ga.us (Gary Coffman) writes:

>In article <3d02io$uni@msunews.cl.msu.edu> root@localhost.com (root) writes:
>> Hmmm, could someone explain HAM radios to me? Like what all a HAM radio can
>>do? costs etc? A few friends and I were thinking about getting some CBs so we
>>could communicate within our city anywhere, (cars, house etc) but I've heard
>>a little about HAM radio and want to know more. What would be the range of
>>a handheld ham radio and cost?
>>thanx

>Amateur radio covers a very wide spectrum of activities. [...]

(Remainder of Gary's excellent summary of Amateur Radio deleted for
brevity.)

I don't want it to seem like I'm picking on Gary here, as he's always
been an outstanding contributor to these forums. However, this post is
a convenient place to follow up with my observations of a creeping "disease"
(for want of a better word) that's overtaken the rec.radio.amateur.*
newsgroups (certainly there are much better examples than this
one).

Specifically, many frequently-asked questions are asked over and over
again. This is understandable, as not everyone hitting the ground on
these newsgroups does so at a full sprint. What dismays me is that the
experienced cadre of readers are answering those FAQ's piecemeal. Even
worse, they aren't pointing out where to find further information about
Amateur Radio (i.e., the FAQ lists for this newsgroup) and Usenet in general
(FAQ's on news.announce.newusers).

What is puzzling is that we do have an FAQ list, posted twice monthly (a
little more often than some would like, but that's life), that covers
just about everything that's been asked (the most notorious example
being the Callsign Server at the University of Buffalo). Some random
observations:

- Encouraging people to answer FAQ's with the FAQ document is not intended
to stifle people's opinions, simply to provide a base to build on. It's
fine to disagree with the "standard" answers, as long as you acknowledge
that they exist. Having an FAQ at least saves people from having to
answer them over and over (Consider the recent spate of "WWW sites
wanted!" articles. Designating someone, or a group of people, to
maintain a definitive list and publishing that list, surely has to be
more efficient).

- Directing someone to standard documentation helps them become self-
sufficient by not only answering their specific question, but

demonstrating the means to answer future questions by themselves (a variation on the old "Give a man a fish, you feed him for a day, teach a man to fish, you feed him for life" proverb).

- It is possible that the FAQ expires so fast at many sites (despite an Expires header set over a month into the future) that it's essentially invisible. Similarly, the percentage of relative newcomers to this newsgroup may be on the rise, and they may have only read the last few day's of posted articles, if any at all, before posting.

- Hams are a friendly bunch, and want to help people, even if that "help" is not the most efficient means to assist an individual seeking information (or even a means that's fair to that person by not fostering dependency). Computer-related newsgroups (as well as the computing field) have a much stronger tradition of "RTFM" (Read the Friendly Manual) as that's the only realistic way to get large numbers of people up to speed on the technical basics, which are mostly pretty objective and cut-and-dried, which is perhaps why FAQ's on those newsgroups are more successful.

So, here's the loaded questions:

- Is the FAQ a moot point? Should it pack up and go home?

- Is the Elmers list a moot point? Should it pack up and go home? (The 4th anniversary of this resource is approaching, and I want to make sure it's used before I undertake a biannual mass-ack and update).

- Is trying to get people to use standard documentation and become self-sufficient in finding net information a lost cause in today's on-line ham community?

I'm not playing "sore loser" here, I just want to make sure that we are approaching things in a way that's best for this newsgroup (Those who undertook the FAQ documents on this newsgroup four years ago thought that successes and lessons-learned in a wide variety of other newsgroups with existing FAQ documents could be easily transplanted here. Perhaps we were wrong.).

Further followup discussion and E-mail replies welcome. I'll certainly summarize if there is sufficent interest.

>Also, there are different plans. Cheapest in this area is 11.75/month, with
>no on-air time (you pay by the minute).

A 'new service' as sprung up in our area. The 'un-activated' cell phone in my car now responds with a message from 'American Roving Network' or some such, when you dial a number... They place collect cards, charge to a phone card, or charge to a credit card (though I'd not send a credit card number of the air 'day to day' I'd certainly do it in an emergency...

BTW, for real 'emergency' service, you need BOTH the 2m rig and the cell phone. Not everyone has a 2 m rig for you to talk to, but cell phones require working central equipment to function (which may not work in all times) and does not cover all areas. Like 'in the boonies' ...

How does a "better" op-amp improve the Hamcomm circuit's performance?
I built the 741 op-amp version and it works well.

>of Part 90 licensing or Type Acceptance regulations under FCC jurisdiction,
>if you fired up on a police dispatch repeater with your modified ham rig.

WRT the "interfering with an officer", been there, done that, was (later)
arrested, booked, charges filed by a district attorney with too much time
on his hands, judge listened to the prosecutors opening argument (after
selecting a jury), said "is that the best you've got?" and directed a
verdict of not guilty as a matter of law. I called for help at a
traffic accident, no other available communications.

The reason I bring it up is that today I got a christmas card from the
family of the 7-year old I saved that day. Had I not called on my
(gasp) ham radio that was (illegally modified - shudder!), the kid
would be dead. And, that decision was based not only on my years

experience as a paramedic (which was enough reason for me to do it),
but also the reporrt of the doctors at the peds trauma center he went
to. He was in the hospital for 8 weeks. Next June, he goes to the
US Air Force Academy.

Do what you have to do.

And, you do have blanket immunity to do what is needed, in an emergency.
In Gary's example, an unlicensed person would be subject to prosecution
and arrest for transmitting on a ham radio (now days, hams have to be
licensed, nobody else does - even pilots and boaters, if they're not
leaving the country). This is silly, of course. As I said, do what
you have to, don't abuse it, and most likely, nothing will happen.

A point of note:
(in addition to all the points made in other messages)

If your friend decides to do some boot-legging until he gets his licence,
he may be in for a rude shock. Some people may not talk to him even once
he's licenced. And if he has caused interference as a 'joke' in his
boot-leg (or later) days, he might as well pack it in.

Counting eagerly to the 26 days it'll take to get my callsign. (God bless
electronic submission of 610! )

## 4678. Help wanted: Power connection standards using Molex connectors

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-22 02:58:31 UTC
From: furuta@cs.tamu.edu
Message-ID: <3daq0o$gf2@news.tamu.edu>
Source record: 254567

A few years back there was a bit of discussion about using "Molex" style connectors as the basis for making power connections to 12V sources. Can someone please remind me what standard was eventually decided upon and/or point me to a published reference? I seem to remember it made it into QST but have not been able to find it in a search of the past few years' indices. Thanks.

|>This is ridiculous. I can't believe that people are actually discussing
|>this topic.

Hey, whatever floats your boat. I don't know what got you interested in
the amateur radio *service*, but if emergency preparedness gets someone
else interested, what skin off your back is it?

|>Amateur Radio is a hobby. The LAST thing we need are MORE people who
|>don't give a damn about amateur radio but just want cheap reliable
|>communications. The 2m ham band is NOT a repository for people who are
|>tired of the noise on the CB, it is for people who are interested in
|>radio a medium of communication.

What brought about this tirade?

|>Finally, it is illegal to use amateur radio to circumnavigate a wireline
|>carrier....i.e. you can't use an amateur phone patch to avoid long
|>distance charges etc.

Please cite the regulation(s) that makes any transmission illegal if its
purpose is to prevent loss of life or property? Don't look in Part 97
as section 403 explicitly says nothing in Part 97 prevents you from making
set transmissions.

|>Whats the bottom line ? If you are interested in amateur radio.. get your
|>ticket and join a worldwide fraternity and by all means use your HT in an
|>emergency. If you just want an electronic security blanket... go cellular
|>and leave the ham bands to the others.

Glad to hear everyone interested in amateur radio must have your views
to be a valid member of "the worldwide fraternity". I just hope I'm not
a member of that fraternity, because I think your attitude stinks.

|>Finally, save your flames; this is my PERSONAL opinion. I am entitled to
|>one, besides...you asked.

Flames? What flames? Your abhorrent narrow view of amateur radio doesn't
merit flames. ;-)

Agreed. I am very much a proponent of standardized phonetics. I hate it when people use "Kilowatt" for K instead of the standard "Kilo". I'm always writing down "KW...".

# 4686. Re: Modifications to HT legal? What does FCC say?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-22 05:30:21 UTC
From: billsohl@earth.planet.net
Message-ID: <3db2td$db4@jupiter.planet.net>
Source record: 254530

David A. Webb (mudaw@uxa.ecn.bgu.edu) wrote:

Details about confiscation of a modified HT deleted for brevity.

: The school charged me with possession of an illegally modified
: radio. I faught the charge and it was dropped.
:
: I went to court today to petition the return of my personal
: property, including the radio.
:
: The university police, the local sherrif's office, and the states
: attorney all told the judge my radio is illegal to possess.

It is the duty of all of these public officials to prove that the
radio IS illegal. You should not have to prove anything. If none
of these public law enforcement officials can sight any specific
law making your radio and/or your possession of it illegal then
there's no reason you shouldn't get it back.

: To the best of my knowledge, my radio is perfectly legal, so long
: as I never transmit on frequencies I am not licensed for.
: (the sherrif's office had a fit when they realized it could be
: tuned to and transmit on their frequency)

So can just about any other general coverage transceiver. Most of
these "officials' are technically inept and totally clueless when
dealing with this type of situation.

: I need to find someone who is familiar with the FCC rules and can
: tell me exactly which paragraph, section, subparagraph...etc.
: that will tell me wether my radio is illegal or not.

You won't find any as the laws don't state what you can do, they only
(usually) state what is not allowed.

: The judge is not allowing me to have my radio back, but I am
: going to try again if I can find proof that it is legal for me to
: possess in its modified condition.

On what basis is he making his "judgement?" Ask the judge for
the authority under which he is making his determination.

: I'm not arguing the morals of having a radio which is capable of
: transmitting on police frequencies, I am just arguing the LAW. I
: am a bit perterbed that the local police agencies don't need any
: proof to back their statements.

And that's the basis of my comments above. You (and your radio)
are not guilty of anything unless it can be PROVED...and THEY are
they ones that must point to some specific law that you (or the radio)
violates.

: By the way, when I called the FCC, they indicated that there is
: no law indicating such a radio is illegal. They didn't have the
: time to muddle through the rules to try to determine if it IS
: legal.

Why won't they simply write a general statement to that effect and
send it to you?

: I guess this is like saying that you can't find in print where it
: is legal to drive 20mph in a 30mph zone, although if you read
: more carefully, you can determine it is legal.

Good analogy, use it in court.

```
Posted-By: auto-faq 3.1.1.4
Archive-name: radio/ham-radio/faq/part1
Revision: 1.7 10/23/94 20:52:50

Rec.radio.amateur.misc Frequently Asked Questions
Part 1 - Introduction to the FAQ and Amateur Radio
------------------------------------------------------------------------------

This is a regular posting of frequently-asked questions (FAQ) about Amateur
Radio, also known as Ham Radio. It is intended to summarize some common
questions on the rec.radio.amateur.misc newsgroup and Info-Hams mail list
as well as to help beginners get started.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them.
* If you are a new user, please print and review the FAQ articles and look at
the instructions in the news.announce.newusers newsgroup before posting any
articles. If you don't find the answer in the FAQ and you have tried
elsewhere, then you have "done your homework" and it is acceptable to ask
the question on the UseNet newsgroups. Along with your question, please
state where else you have looked for the answer so others also know that
you have done your homework.
* If you are an experienced user, please help by refraining from answering
frequently-asked questions on the newsgroup if they are already answered by
the FAQ articles. Instead, send e-mail to the user who asked the question.
(It will be helpful if you include the part of the FAQ that answers their
question, but not the whole thing.)

The FAQ cannot always prevent people from posting repetitive questions. But
even if hundreds of questions get posted, it saves you from having to answer
them hundreds of times. Also, a friendly pointer to the FAQ in your first
answer can help that person refer to the FAQ in the future. That is when we
can begin to get a real savings of network bandwidth.

To reduce the size of each article, the FAQ information is posted in 3 parts:
Part 1 - Introduction to the FAQ and Amateur Radio
Part 2 - Amateur Radio Organizations, Services, and Information Sources
Part 3 - Amateur Radio Advanced and Technical Questions

Table of Contents

** What can't I do with an Amateur Radio license? (pre-4/92)
** I'm interested, who will help me? (11/92)
** Should I build my own equipment or antenna? (11/92)

Part 2 - Amateur Radio Organizations, Services, and Information Sources
** Where can I find Ham Radio information with a computer? (8/94)
* Mosaic, World-Wide Web, Gopher, and WAIS (8/94)
* The rec.radio.* newsgroups (2/94)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (10/94)
* The Internet File Transfer Protocol (FTP) (2/94)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (1/94)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (1/94)
* Lists of radio modifications and extensions (2/94)
** Can I send ARRL or W5YI electronic mail? (11/92)
** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (1/94)
** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.

Where should I start? (2/94)

Part 3 - Amateur Radio Advanced and Technical Questions
** What are the different US amateur classes and what can each of them do? (pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (10/94)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US? (9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another country or if I am a FCC licensed ham who wants to operate in another country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** On what frequencies do JPL and GSFC retransmit the shuttle audio? (10/92)
** Can I take my HT on an airplane and operate it if I get the permission of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 1--

** Introduction to the FAQ

* How to Contribute to the FAQ Articles

We accept suggestions from the Amateur Radio community. Please consider that all new contributions need to be SHORT and concise in order to be included. If a contribution is too long, the FAQ editors can help you find a more appropriate FTP archive or mail server for your article.

We always accept corrections. Please allow some time (often not the next issue of the FAQ) because the FAQ maintainers do this as volunteers so each must give higher priority to their employers.

Send correspondence to hamradio-faq@amdahl.com so that it will reach all the FAQ coordinators: (listed in alphabetical order)

Ed Hare KA1CV ehare@arrl.org (Newington, CT, USA)
Jack GF Hill W4PPT root@jackatak.raider.net(Brentwood, TN, USA)
Ian Kluft KD6EUI ikluft@oes.amdahl.com (Santa Clara, CA, USA)

Paul Schleck KD3FU pschleck@gonix.com (Omaha, NE, USA)
Chris Swartout N6WCP cas30@uts.amdahl.com (San Jose, CA, USA)
Steve Watt KD6GGD steve@wattres.sj.ca.us (San Jose, CA, USA)
Rosalie White WA1STO rwhite@arrl.org (Newington, CT, USA)
Derek Wills AA5BT oo7@astro.as.utexas.edu (Austin, TX, USA)

* Please Send Questions to the Newsgroups, Not the Editors

We wish it wasn't necessary to say this. Please don't send questions to the editors (unless you are sending an answer with it as a submission for the FAQ.) The proper procedure for questions on UseNet is
1) Read the FAQ
2) if it isn't there, check other sources (see Part 2 of the FAQ for electronic sources including Mosaic/WWW)
3) post on the newsgroup

The Internet has become an atmoshpere where questions are asked of everyone as if they have an infinite amount of time to help. The volunteers who maintain the FAQ do not have time to answer questions. Some FAQ maintainers on other newsgroups have been led to believe that no good deed goes unpunished - let's avoid bringing the same end to this effort.

* Call for FAQ Editors

As with any volunteer effort, new volunteers are often needed. The previous paragraph may have already given a hint about this: we need a new editor to post the Ham Radio FAQ. Preferably this should be someone who has enthusiasm for Ham Radio, experience with UseNet, and the ability to work with the other editors. No single person can know all the various aspects of this diverse hobby so the editorial review group is intended to make a greater combination of experience.

The FAQ is currently posted with the AUTO-FAQ software, which is written in PERL. So it would be a plus for volunteers to post the FAQ to have PERL installed on their system and be able to use "cron" or "at" so that postings can go unattended.

Anyone who wants to make their contribution to the Net as a volunteer should contact hamradio-faq@amdahl.com.

* Acknowledgements

All questions listed as modified "pre-4/92" are entirely Diana Carlson KC1SP's work or her editing of a contributor's work. Diana established this FAQ and credit is due to her for founding this project.

Thanks to Devon Bowen KA2NRC for accepting this FAQ in e-mail every month to keep the FTP archive at ftp.cs.buffalo.edu up-to-date.

* Notes on "Netiquette"

The rec.radio.amateur.misc newsgroup and Info-Hams mail list have a large daily volume of traffic. They can operate more efficiently if the following netiquette guidelines are followed. Please take them seriously.

* If you are new to UseNet, the introductory articles in news.announce.newusers are required reading. Go to that newsgroup now. Definitely, read the instructions there before posting anything. Other rec.radio.amateur.* readers will appreciate it!
* Pick the right newsgroup. Use only the most specific newsgroup for your subject. For example, a question about a homebrew antenna only needs to be posted to rec.radio.amateur.antenna. Also, don't post to rec.radio.amateur.misc when the subject can go in another rec.radio.amateur.* newsgroup. So, when there is a more specific newsgroup, that's the one you want.
* When posting a followup article, ALWAYS try to minimize the number of lines of quoted material from the original article.
* As a general rule when you try to determine whether to reply to someone by e-mail or with a followup article, remember to "praise in public, criticize in private." It's OK to disagree technically but be careful not to attack the person with whom you disagree. Also, be careful with your use of the word "you" when posting a follow-up article. Many unnecessary flame wars have started that way.
* Use a descriptive subject. For example, a message subject of "Ham Radio" tells the reader NOTHING about the contents of your article since the whole newsgroup is about Ham Radio. Other examples of subjects which are so broad that they become useless could include, "Help," "A Question," "Antennas," or "Frequencies." Maybe "Books on Antennas?" or "Where can I find Repeater Frequencies?" would be better, for example. Remember, in a busy newsgroup a lot of users decide which articles to read from the subject line alone. If you post, don't deprive yourself of an audience!
* Before answering a question, check if the FAQ adequately answers it or if someone else already answered it. If you have more to add, make sure to reference either the FAQ or the related articles.
* If a user posts a question which is directly answered by the FAQ, there is no need to post an answer - the information is already available on the newsgroup. Instead, just send an e-mail message which politely explains where to find the FAQ. They will probably appreciate it if you include the answer to their question. (Don't send a "nastygram" - that would just discourage future participation.)
* Pay attention to the size of your audience - use the "Distribution:" header. If you leave it blank, your message will go to every civilized country in the world and occupy disk space in all news systems in all those places. If that's what you intend, that's fine but make sure your article is relevant outside your country. (In particular, Hams should already know there is more to the world than just their own country.)
* If you have an item for sale, please limit the distribution area so that, for example, an article about a radio for sale in New Jersey won't get to California or Europe. If you wish, you may cross-post

your for-sale article to rec.radio.swap.
* Software sources should be posted to either alt.sources, comp.sources.misc, or comp.sources.* for a specific machine type. Software binaries should be posted to the appropriate subgroup of comp.binaries.

** What is Amateur Radio?
Amateur Radio is a non-commercial radio communication service whose primary aims are public service, technical training and experimentation, and communication between private persons. Amateur Radio operators are commonly called hams. Hams often communicate with each other recreationally but also provide communications for others at public events or in times of emergency or disaster.

** Who can become a ham?
The answer to this question differs in every country.

The answer for the USA is listed below. If your country has a newsgroup specifically for it (i.e. UK, Australia, Germany) the most accurate answers can be found there. See Part 2 for the list of region-specific newsgroups.

If that doesn't help, the American Radio Relay League (ARRL) may be able to help because they communicate with similar organizations in other countries, probably including yours. They can be reached by electronic mail or surface mail (see Part 2.)

In the USA, anyone who is not a representative of a foreign government can be an Amateur Radio operator. There are tests that you must pass to get a license, however the tests are not insurmountable. On that general level, the requirements are probably similar in almost every country.

For more information on becoming a Ham in the USA, the ARRL has a toll-free number where you can request information: 1-800-32-NEW-HAM (don't worry about the number being one digit too long - the phone system ignores it.) Other information can also be obtained from the ARRL e-mail information server in the file called PROSPECT. Details on the server are in Part 2.

** Where can I locate information and books on Amateur Radio?
Your local Radio Shack sells some ham radios and Amateur Radio license books. Books can also be obtained through the mail from ham radio organizations, such as ARRL in Newington, CT (203-666-1541) and W5YI in Dallas, TX (1-800-669-9594). There may be one or two ham radio stores in the local area (ie, within 50 miles). Try looking in the Yellow Pages under Radio Communications.

For the Novice license, get a Novice License manual, plus 5-word-per-minute Morse code tapes, costing around $25. For the Technician license, get a combined Novice and Technician License manual, and an FCC

Rules manual, costing around $32. The FCC Rules manual is a good idea for Novice also, but not necessary, since the Novice License manual contains all the FCC Rules that are required for the Novice License.

The ARRL Education Activities Department has several programs to help amateurs (or prospective amateurs) to get started. Ask for a "New prospect package" available free of charge, from ARRL HQ, Educational Activities Department, 225 Main St, Newington, CT 06111.

Information on Ham Radio can also be obtained with your computer. Part 2 of this FAQ contains a significant amount of material on that subject.

** How much does it cost?
To take the tests for any class of amateur radio license, there is a small charge (around $5-$6 currently) to cover copying costs and running the testing sessions. (Due to changes in 1993, Novice tests are under same procedures as the others.) The cost of a radio is really dependent on what you want to do. You can make your own radio and antenna for under $150. You can buy a used single-band radio for $150-$300. Or you can buy a new multi-band multi-mode radio with all the doodads for $300-$3000. I'd suggest you learn more about ham radio, talk to local hams, find out what you want to do with ham radio first.

** Where can I take the tests?
The Novice tests Used to be given by any two qualified hams of General class license or above. Now all the license tests are given by three qualified Volunteer Examiners (VEs) who volunteer their time.

To locate an ARRL testing session in your area, you can contact ARRL at 203-666-1541 x282.

See also the section "Where can I find VE sessions in my local area?" in Part 2 because more information is available via UseNet.

** What are the tests like?
First off, come prepared to VE sessions. Bring: TWO forms of ID, one of which has a picture on it; a calculator (if necessary); a pen and two pencils; the applicable examination fee (around $5-$6 for 1993); the original AND a copy of your current Amateur Radio license (if you have one); the original AND a copy of any CSCEs for tests you've already passed (if you have any).

Each of the written tests (Novice, Technician, General, Advanced, and Extra) are generally a multiple choice test of approximately one-tenth of the question pool. For example, if the question pool is approximately 300 questions, then the test will be a 30-question test. You need to get 75% correct to pass. Note that they truncate to determine the correct number of questions. That means for a 30 question test, you need to get 22 right, which is actually only 73.3%.

Once you've paid the small fee for Technician-Extra tests, it costs no extra to take another test, so I'd suggest you keep taking the next more advanced test until you fail. If you pass the written but not the Morse code (or vice versa) for a specific class license, you have up to one year to take the other test before you would have to retake the written test again. Note that some VEs will not allow you to take the written test unless you've first taken the Morse code test.

The Morse code test is a receiving test only. The test run 5 to 7 minutes. After the test, you are given a 10-question multiple-choice or fill-in-the-blank test. Passing grade is 7 or more. If you fail the 10-question test, the examiner team will examine your copy sheet to see if you have 1 minute of solid copy with no errors. For 5 wpm, that's 25 characters, for 13 wpm, that's 65 characters, for 20 wpm, that's 100 characters. If they can find 1 minute solid copy, you've still passed.

Hints on Morse code tests: Generally, it will be a standard QSO (conversation), and it MUST contain at least one of each of the following:
26 letters A-Z, 10 numbers 0-9, comma (,), period (.), slant or slash (/), question mark (?), double dash prosign (BT), end of message prosign (AR), end of contact prosign (SK).
The letters count as one character, all others count as two characters. There are a couple other prosigns which are worth knowing, but will not be on the test, like "I'm done talking, next" is K, "I'm done talking, back to you" is KN, "Please wait" is AS.

** What can I do with a ham radio license?
There are so many things, it's a difficult question to answer, but here's some ideas:
* Talk to people in foreign countries.
* Talk to people (both local and far away) on your drive to work.
* Help in emergencies by providing communications.
* Provide communications in parades or walkathons.
* Help other people become hams.
* Hook your computer to your radio and communicate by computers.
* Collect QSL cards (cards from other hams) from all over the United States and foreign countries and receive awards.
* Participate in contests or Field Day events.
* Provide radio services to your local Civil Defense organization thru ARES (Amateur Radio Emergency Service) or RACES (Radio Amateur Civil Emergency Service).
* Aid members of the US military by joining MARS (Military Affiliate Radio System).
* Participate in transmitter hunt games and maybe build your own direction-finding equipment.
* Have someone to talk to on those sleepless nights at home.
* Receive weather pictures via satellites.
* Build radios, antennas, learn some electronics and radio theory.
* Talk to astronauts in space, or use the moon to bounce signals

back to people on the Earth.
* Experiment with Amateur TV (ATV), Slow-Scan TV (SSTV), or send
still-frame pictures by facsimile.
* Experiment with amateur satellite communications.

** What can't I do with an Amateur Radio license?
The most important thing you can't do is transact business of any
kind over ham radio. Interference to other hams or services, as
well as obscene, profane or indecent language is not tolerated and
is illegal. Music and broadcasting are not allowed on ham radio.
Some personal conversations may not be appropriate to Amateur Radio.
Do you really want the whole world to hear about Aunt Mabel's
hemorrhoids?

** I'm interested, who will help me?
There are hams who are willing to become "Elmers" (mentors, helpers)
in your local area. Look around and ask local hams. Search out local
radio clubs. As well, some people have volunteered to be an Elmer
over the Usenet. A list of UseNet Elmers and their e-mail addresses
is posted to the newsgroup monthly. If anyone wants to be an Elmer,
send e-mail to
elmers-request@unomaha.edu

There is also a lot to be said for exploring on your own. Take a
look around the FTP archives and e-mail servers listed in Part 2.
There's so much out there on UseNet, you'll find plenty of things
you're interested in.

** Should I build my own equipment or antenna?
[see also rec.radio.amateur.homebrew and rec.radio.amateur.antenna]
"Homebrewing" is a fun and educational part of ham radio. It is a
thrill to build your own transmitter and put it on the air. However,
building your own receiver can be quite complicated; if you don't have
electronics experience, you may want to buy a receiver instead. Most
homebrew transmitters are QRP (transmit very low power). That's fine
for an experienced ham with a very good antenna, but a Novice ham will
just get frustrated. Your first rig, therefore should NOT be a home-
brew.

Antennas can be much simpler projects than the transceiver, though
some types are also quite involved. Most hams build their own anten-
nas for base station use and buy antennas for mobile (car) use. Most
beginner ham books describe how to build different types of antennas.
Order of difficulty, from easiest to more difficult, for some common
antennas are: wire dipole, Zepp, Yagi, Quad, and Log-Periodic. Books
from many sources, including ARRL and several Hams, discuss antennas
in depth.

When building or even understanding antennas, it is good to know the
relationship between the antenna element length and the frequency or
wavelength it is designed for. An antenna performs best at multiples
of 1/4 of that wavelength, though 5/8 wave also has beneficial qualit-

ies. The wavelength is related to the frequency with the following formula:

wavelength (in meters) = 300 / frequency (in megahertz)

You do not need a huge antenna or tower like ones you may see around your neighborhood. Large beam antennas and 40-foot towers are very expensive. As a beginner, a simple dipole antenna is perfectly adequate. As you gain experience (and money :-), you may want to invest in something bigger.

If you can afford new rigs and antennas, there are many mail order stores that advertise in ham radio magazines. If you want to buy a used rig, the best place is at a "hamfest" (ham flea market). You should take along an experienced ham, since some of the used equipment may be inoperative, overpriced or poor quality. You can also answer ads in ham magazines or posted at ham radio stores, although often, by the time you call, the equipment has already been sold.

# 4689. rec.radio.amateur.misc Frequently Asked Questions (Part 2 of 3)

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-22 06:26:41 UTC

Rec.radio.amateur.misc Frequently Asked Questions
Part 2 - Amateur Radio Organizations, Services, and Information Sources
------------------------------------------------------------------------------

Questions discussed in Part 2: (dates indicate last modification)
** Where can I find Ham Radio information with a computer? (8/94)
* Mosaic, World-Wide Web, Gopher, and WAIS (8/94)
* The rec.radio.* newsgroups (2/94)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (10/94)
* The Internet File Transfer Protocol (FTP) (2/94)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (1/94)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (1/94)
* Lists of radio modifications and extensions (2/94)
** Can I send ARRL or W5YI electronic mail? (11/92)
** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (1/94)
** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.
Where should I start? (2/94)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 2--
```

** Where can I find Ham Radio information with a computer?
This question has many answers spanning several electronic media including WWW, UseNet, electronic mail, the Internet, dialup BBS's and others. Various electronic information sources are summarized under the subheadings that follow.

All electronic mail addresses listed are in Internet format. If your site is not connected to the Internet and does not support Internet-style mail addresses, you will need to contact either your system administrators or a local "guru" to find out how or if you can send mail to the sites listed. Ask them, "how can I get mail to the Internet?" and show them the address you're interested in.

* Mosaic, World-Wide Web, Gopher, and WAIS
A new generation of information retrieval tools exploded into great popularity on the Internet in 1993 and 1994. They are the gopher protocol, wide-area information server (WAIS) and World-Wide Web (WWW). They are indeed complete topics of discussion unto themselves which can be found, among other places, in the following newsgroups:

comp.archives
comp.infosystems.announce
comp.infosystems.gopher
comp.infosystems.wais
comp.infosystems.www

Please read those newsgroups if you have questions about the software or how to use it.

At the current rate of growth, we can never hope to list all the servers. We would like cooperation from people who assemble WWW servers to add references to other useful Ham Radio information available at other WWW, gopher, WAIS, and FTP sites. That way the FAQ can direct readers to servers that can reference more servers with more information than we can include on a periodic UseNet posting.

Some useful URLs (uniform resource locators) which can be used with WWW (Mosaic, Lynx, etc.) are as follows:

General Ham Radio Information:

Amateur Radio Virtual Library
http://buarc.bradley.edu/wwwvl-ham.html
Ham Radio FAQs & info: (The OSU server turns this into WWW hypertext)
http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/top.html
file://rtfm.mit.edu/pub/usenet/radio/ham-radio
all radio FAQs & info:
http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/top.html
wais://rtfm.mit.edu/usenet/radio
Federal Communications Commission:
http://www.fcc.gov/
http://www.fcc.gov/1/Private_Radio
North Carolina State HamRadio WWW Server:
http://www.acs.ncsu.edu/HamRadio

Yahoo's Ham Radio Index:

http://www.elvis.msk.su/gnn/wic/hobbies.02.html (Russia)
http://src.doc.ic.ac.uk/gnn/wic/hobbies.02.html (UK)
University of Buffalo's FTP server:
file://ftp.cs.buffalo.edu/pub/ham-radio
Oakland University's FTP server:
file://oak.oakland.edu/pub/hamradio

Specialized Topics:

SAREX: Shuttle Amateur Radio Experiment
http://hypatia.gsfc.nasa.gov/sarex_mainpage.html
Morse Code Demo
http://macgwy-mac2.gsfc.nasa.gov/GARC/exp/morse.html

Although still very much works-in-progress, the last two URL's
are excellent examples of WWW servers with numerous references
to other resources.

* The rec.radio.* newsgroups
The primary distribution mechanism for this FAQ is UseNet. There
are several newsgroups dealing with Amateur Radio and other aspects
of radio. The full list is as follows:

rec.radio.amateur.misc (*) Ham Radio - misc/general topics
rec.radio.amateur.antenna Ham Radio - antenna construction/theory
rec.radio.amateur.equipment Ham Radio - manufactured equipment/mods
rec.radio.amateur.digital.misc Ham Radio - digital radio modes: packet/
AMTOR/RTTY/etc (formerly r.r.a.packet)
rec.radio.amateur.homebrew Ham Radio - radio experimentation, kits
rec.radio.amateur.policy Ham Radio - policy & regulation
rec.radio.amateur.space Ham Radio - satellites, EME, shuttle/MIR
rec.radio.broadcasting public broadcast radio
rec.radio.cb Citizens' Band Radio
rec.radio.info (*) periodic info from all rec.radio groups
rec.radio.noncomm misc non-commercial radio topics
rec.radio.shortwave Shortwave Radio
rec.radio.scanner Utility Radio above 30Mhz
rec.radio.swap radio equipment wanted and for sale

Country- or region-specific newsgroups include the following:
aus.radio Australia (misc radio topics)
aus.radio.amsat Australia (amateur satellites)
aus.radio.packet Australia (packet radio)
de.comm.ham Deutschland/Germany
fj.comm.ham Japan
uk.radio.amateur United Kingdom
in.ham-radio USA, Indiana
sbay.hams USA, CA, South Bay Area/Silicon Valley
triangle.radio USA, NC, Research Triangle area

This FAQ is cross-posted to the newsgroups marked with asterisks (*).
It is also cross-posted to rec.answers (the archive for FAQs in the
rec.* newsgroups) and to news.answers (UseNet's general repository for
FAQs.) These should be the first places to look for new current
copies of the FAQ.

Most of the rec.radio newsgroups have their own FAQs as well.

* The ARRL e-mail server
ARRL is the American Radio Relay League, representing and promoting
Amateur Radio in the USA. They have established an automated file
server which responds to information requests via electronic mail.
To use the server, send mail to info@arrl.org with any number of
one-line commands in your message. Valid commands are as follows:

help sends more detailed instructions about the e-mail server
index sends a list of the files currently available
send file sends a file (replace "file" with the file's name)
several files are referenced by name in parts of this FAQ
quit ends command processing - use it if a signature will be
appended to your message

The server program will respond to the commands, each in a separate
message. Among many other informative files, a current copy of the
FAQ (updated monthly) can be obtained from the ARRL e-mail server.
Other parts of this FAQ refer to specific files on the ARRL server.

* The KA6ETB e-mail "HAM-server"
Steve Harding KA6ETB has an e-mail server on his 486 PC at home with
over 70 megabytes of Ham Radio-related files (at the time of this
writing.) You can request any of those files with an e-mail message
to the HAM-server at "ham-server@grafex.sbay.org". This site
has a mostly-different selection of files than the ARRL, though some
overlap is unavoidable. The HAM-server contains many plain-text
articles along with programs for MS-DOS & Windows, Unix, Mac, and
OS/2.

Use these commands to send requests to the KA6ETB HAM-server.
HELP instructions and info about the HAM-server
INDEX list of files available from the system
GET <file> send a file (see the HELP notes for more info on
getting binary files in uuencode or xxencode format)

NEWFILES <date> list of new files since the given date
PING used for testing your path to the HAM-server, it just
sends a simple reply so you can look at the path data
QUIT makes the HAM-server stop reading the message (so it
won't try to read your .signature)

Submissions for inclusion in the HAM-server may be mailed in UUENCODED
format to "incoming@grafex.sbay.org".

* The Internet File Transfer Protocol (FTP)
Sites connected to the Internet can access large amounts of data
almost anywhere in the world, often at high speeds. One common way
to transfer the data you want is FTP. Some sites offer a service
called "anonymous FTP" which allows remote users to access a set of
public files without requiring a password.

Perry Rovers coordinates a fairly definitive list (formerly
maintained by Tom Czarnik) of anonymous FTP sites, their IP
IP numbers, time zones, general contents, and access policies
which he posts to several newsgroups, including comp.archives,
comp.sources.wanted and news.answers. It is itself available
via anonymous FTP (how about that?? :-) from (among other places)
rtfm.mit.edu under directory /pub/usenet/news.answers/ftp-list.

For specific information about exact locations of files by name,
the Archie database server may be of help. First check if anyone has
installed the "archie" program on your machine and use it. Archie may
also be accessed by telnetting to one of many sites. The list
of archie sites is numerous and growing fast. For a current
list of sites, telnet to archie.sura.net (login "archie"), then
please use the one closest to you to conserve network bandwidth.

For those without telnet capability, the database may be accessed non-
interactively via mail server. Send E-mail with the word "help" to
archie@host where host is one of the Archie sites above.

The above two resources (the FTP list and the Archie server) are
extremely powerful tools for finding out "what's out there" at various
FTP sites around the world. *PLEASE* exhaust their capabilities
before posting requests to the net.

The following is a brief summary of major ham-related FTP sites and
places where you can obtain a current copy of this FAQ:

ftp.cs.buffalo.edu:/pub/ham-radio
(submissions to this ftp site should be made to
bowen@cs.buffalo.edu) - Contains many ham radio files,
including the FAQs, Elmer list, SWL and scanner info, Packet
FAQ, examination opportunities, information on various
regulations, information on commercial radios (i.e. GE or
Motorola), SSTV (slow-scan TV), HTs (handheld transceivers).
Recently, the rec.radio.amateur Working Group (rra-wg,
see below for more information about their mailing list)

has started to encourage archivers of radio modification
instructions to mirror them at this site. In this way,
maintainers may come and go but the collection of
mods will remain continuously available (and undergo
constant positive growth). This FAQ is updated monthly
here.
grivel.une.edu.au:/pub/ham-radio
Australian mirror of ftp.cs.buffalo.edu
nic.funet.fi:/pub/ham
This is one of the largest FTP sites in Europe and maybe the
most popular. /pub/ham/info contains a mirror of Buffalo.
Other topics available here include amiga, antenna, HF, packet,
satellite, scanners, program sources, VHF and others.
This site is also one of the article archives for the
rec.radio.info newsgroup.
ftp.uu.net:/networking/ka9q
A large FTP site in the USA - UUNET contains sources and
binaries for many different types of computers.
ftp.ucsd.edu:/ (site was down when we were looking for the new path)
The "home" site (with the most recent versions for the largest
number of different computer platforms) of the KA9Q TCP/IP
Network Operating System (NOS), other ham-related software,
and the archives for the Info-Hams, Packet-Radio, Ham-Policy,
Radio-Info and TCP-Group digests.
vixen.cso.uiuc.edu:/pub/ham-radio
This site contains the HyperCard Hamstacks written by Diana
Carlson as well as ASCII readable ham radio question pools.
ftp.apple.com:/pub/ham-radio
Ham software and information, especially Macintosh software
rtfm.mit.edu:/pub/usenet/news.answers/radio/ham-radio
all participating FAQs and periodic informational postings are
archived here, including those from the rec.radio.* newsgroups
which can be found in pub/usenet/news.answers/radio.
Participating FAQs are automatically archived here when they
are posted on UseNet.
ftp.amdahl.com:/pub/radio/amateur
cd pub/radio/amateur - the most up-to-date copy of the FAQ
(updated nightly when changes are made)
world.std.com
The Ham Radio archive at this site has been moved to
oak.oakland.edu.
oak.oakland.edu:/pub/hamradio
oak.oakland.edu:/pub/hamradio/arrl
Mac, Amiga, Atari, PC files in their own subdirectories.
Also radio mods and an Internet mirror of the ARRL info
server.

See also the file FTP-INFO on the ARRL e-mail server.

If you experience difficulty connecting to the above FTP sites, some
troubleshooting hints are shown below. The unfortunate situation here

is that Netnews is far more prevalent than direct Internet hookups, accurate name servers, smart mailers and routers, and of course, telnet and FTP client services. What this means is that your trouble may be caused by MANY factors.

Here's some hints to check what's wrong:
* It may very well be that your newsfeed and email are via dialup line and UUCP (Unix-to-Unix copy) in the wee hours of the morning. If this is the case, then you have no direct connection to the Internet and thus cannot use real-time interactive services like FTP and telnet.
* If you are at a college or university, your host (ie, the computer you are logged onto) may be on the Bitnet network, which has an email gateway to the Internet, but no direct connect capability.
* If you do have a direct connection to the Internet, does your host have telnet and/or FTP client programs? (ie, if you type "ftp" or "telnet" at your command prompt, do you get anything?) Many hosts, particularly IBM mainframes not running Unix, do not support these services!
* Can you telnet to other hosts and get a login prompt?
It may very well be that some hosts are "not recognized" due to misconfigured connections and inaccurate host tables/name servers (*.mil computers are *NOTORIOUS* for this!)
* If you get "host not in host table" or "host unknown" or similar error, try telnetting via the IP number, a set of four 1-3-digit numbers separated by periods (eg, 198.137.220.1). The exact IP number for the site can be obtained via the nslookup utility, if your computer supports it. (The FAQ does not print IP addresses any more because they change so often.) Your system may not recognize the "fully-qualified domain name" (like callsign.cs.buffalo.edu), but it should ALWAYS recognize an IP number if their network is reachable from yours.
* If you get "network unreachable" check with some more knowledgeable users if your site is actually connected to the Internet. If it is, a link in the network may be temporarily disconnected for maintenance (or by accident.)
* In the case of telnetting to a non-default port (as in the case with the callbook servers), if telnet <host> <port#> doesn't work, but you can telnet to the default login port (ie, no qualifiers), then the manner at which the port qualifier is entered may be system dependent. Also, at many education sites, it is common practice to block telnet connections above TCP socket 1000 or so in a somewhat misguided attempt to block usage of "recreational" TCP socket applications such as Multiple User Dungeons (MUD's) or Internet Relay Chat (IRC). In most cases, a polite word to the system administrators, pointing out the worthwhile services available on sockets 2000 and 3000 will get telnet service unblocked, at least for those ports.
* Syntax for telnetting from different operating systems differ. Some common command syntaxes are: (angle brackets are for

readability, do not type these in literally)
Berkeley Unix or VMS with Wollongong TCP/IP uses syntax:
telnet <host> <socket#>
Other possibilities to try:
telnet console <host> (for 2000 port)
telnet <CR> open <host>:<port#>
telnet <host>/<port#>
telnet <host>/port=<port#> (for Multinet on VMS)
* Compression techniques are different for different operating systems.
However, these hints should help:
foo.sit needs Macintosh UnStuffit to unstuff
foo.hqx needs Macintosh BinHex to uncompress
foo.tar needs Unix or GNU tar utility to extract archived files
foo.Z needs Unix 'uncompress' to uncompress or VMS
compress_vms.exe (on gatekeeper.dec.com) will work too.
foo.z needs the GNU gzip utility (from prep.ai.mit.edu) to
uncompress it. gzip will also uncompress *.Z files.
If more than one method was used,
like for foo.hqx.Z, start at the outside and work in (so uncompress
on Unix with 'uncompress' first, transfer to MacIntosh, then
uncompress with BinHex to get uncompressed file).
* There is an excellent introduction to FTP and archiving software
regularly posted to comp.binaries.ibm.pc and news.answers.
* If all else fails, ASK your system administrator or check system
documentation.

* Access to FTP archives via electronic mail
ANY BITNET, EARN, or NorthNET site can access the Princeton mail
server. It will be most efficient if you know the complete path
and filename for anything you wish to transfer, but you can use
'cd' and 'ls -l' commands to move about and browse the remote site's
directories. The Archie database server may also be useful to search
for files and their directory locations on FTP sites around the world
(see below). Please be patient when using non-interactive mail
servers such as BITFTP as each request may take several hours (or
longer) to be fulfilled.

For access to the FTP server, send email to bitftp@pucc.bitnet (for
BITNET, EARN and NorthNET users ONLY!). Subject doesn't matter.
The text of the email is the FTP commands one after another. For
example, suppose you wanted to access the FTP site lcs.mit.edu:
FTP lcs.mit.edu
USER anonymous
PASS yourname@yoursite (not required)
ASCII
CD telecom-archives
GET filenames
BYE
A help file is available giving detailed instructions by putting
the single word HELP into the text of the email.

For nonBITNET users, there is also a FTPMAIL server at
ftpmail@decwrl.dec.com. Commands include: REPLY <mailaddr>,
CONNECT [HOST [user [pass]]], ASCII, BINARY, COMPRESS, COMPACT,
UUENCODE, BTOA, LS <directory>, DIR <directory>, GET <file>, QUIT,
HELP. Get the help file for more information by sending mail with
the single line "help". The ftpmail site may complain if you try
try to get more than 1 file per email request. Here is an example of
a request:
reply your_name@your_site
connect vixen.cso.uiuc.edu
binary
uuencode
get pub/ham-radio/extra-pool.txt
quit

A note on the use of FTP mailservers: If you want to use FTP
mailservers, like FTPMAIL, please be considerate of any systems that
your mail must pass through. The quickest way to find yourself cut
off from the world is to make the admins of sites that pass your mail
pass 60Mb of X11 graphics system source. If you need large amounts
of information from a mailserver, contact your admin for help -- it
may already be available, or he may know a better way to get it.

* The UCSD Ham-Radio mail list: rec.radio.amateur.misc by mail
You can use rec.radio.amateur.misc even if your site has no NetNews
feed. To subscribe to rec.radio.amateur.misc, send email to:
Ham-Radio-Request@ucsd.edu
In the body of the message, write:
subscribe Ham-Radio
If your local e-mail software does not provide a valid return address
(i.e. Bitnet, many Milnet sites, and many non-Unix e-mail packages)
you can provide your return address between the "subscribe" and the
name of the mailing list (i.e. "subscribe myname@here.org Ham-Radio".)

Similarly, to subscribe to some other rec.radio.* newsgroups, use
the following directions: (all addresses here are @ucsd.edu)
Request address List address Newsgroup
Ham-Radio-Request Ham-Radio rec.radio.amateur.misc
Ham-Digital-Request Ham-Digital rec.radio.amateur.digital.misc
Ham-Policy-Request Ham-Policy rec.radio.amateur.policy
Ham-Equip-Request Ham-Equip rec.radio.amateur.equipment
Ham-Ant-Request Ham-Ant rec.radio.amateur.antenna
Ham-Homebrew-Policy Ham-Homebrew rec.radio.amateur.homebrew
Ham-Space-Request Ham-Space rec.radio.amateur.space
Radio-Info-Request Radio-Info rec.radio.info

IMPORTANT NETIQUETTE NOTE: never ever send a request to subscribe
or unsubscribe from *any* mail list to the list itself. Always use
the REQUEST address. Otherwise you'll end up broadcasting your
request to everyone on the list and getting lots of people angry at
you. (Seriously - this is a completely avoidable mistake and it
does irritate a lot of people.)

TO UNSUBSCRIBE, follow directions above, changing the command word "subscribe" to "unsubscribe"
DON'T POST TO THE NEWSGROUP ITSELF! USE THE REQUEST ADDRESS!
Help is available by using the command word "help". Note that command words MUST be the first word on each line of the message.

You can post to rec.radio.amateur.* by sending your posting email to the mail list addresses at ucsd.edu. Since rec.radio.info is a moderated newsgroup, requests to post to it may be sent to Radio-Info but they will be mailed to the moderator, rec-radio-info@ve6mgs.ampr.ab.ca, for posting.

All of the Amateur radio newsgroups are archived for FTP on ucsd.edu under subdirectory mailarchives/{mail-list-name}. However, Radio-Info is not archived at UCSD because almost everything is either on one of the other lists or in the news.answers archives at rtfm.mit.edu (see also funic.funet.fi above).

To subscribe to rec.radio.shortwave, send email to listserv@cuvma.columbia.edu, message is "subscribe swl-l (your name)"

* Telephone BBS's with Ham-related information
Among many, a large one is WB3FFV. Use 8/N/1. The phone numbers are
(410)-661-2475 1200-38400/MNP5/V32bis/V42bis
(410)-661-2598 1200-38400/MNP5/V32bis/V42bis/PEP
(410)-661-2648 1200-19200/MNP5/V42bis/PEP
Login is bbs, no password. This BBS is also available via UUCP, login is uucpanon, no password. For a list of available files, try:
uucp wb3ffv!~/FILES /usr/spool/uucppublic

Another one is N8EMR at phone 614-895-2553, login hbbs. Data settings are 8 bits, NO parity, 1 stop bit. N8EMR has a comprehensive list of other ham-related BBS's on-line.

ARRL has a BBS called "HIRAM", named after the League's founder. The number is 203-666-0578. More information can be obtained from the file ARRL-BBS on the ARRL e-mail server.

For a more complete list of Ham Radio BBS's, see the file BBS on the ARRL server. See also the file BBS_LIST.TXT on the KA6ETB HAM-server. Also see many of the FTP sites listed earlier in this section. There is now way to keep a list like this anywhere near up-to-date so giving you a lot of sources is the next-best thing!

* Callsign servers and geographical name servers
We know of online callsign servers for the USA, Canada and UK.

If you are at an Internet site you can connect using telnet to the following callbook server (covering the USA and Canada):
callsign.cs.buffalo.edu

There is also a general geographical name server at
martini.eecs.umich.edu

For the UK, you can use a WWW client to access the following URL:
http://www.mcc.ac.uk/htbin/callbook

The callbook server sits on port number 2000 and the geographical name server sits on port 3000. These are different port numbers than what telnet usually defaults to. So if you just telnet to these machines, you will get a login prompt instead of the server. How you tell your telnet program to connect to port 2000 or 3000 instead of the default port is operating system dependent but it is usually done with a line like

telnet callsign.cs.Buffalo.edu 2000

If this doesn't work, check the telnet/FTP troubleshooting hints above or consult your local systems guru for the proper command string.

The interactive servers are designed to be somewhat self-explanatory and they support fairly detailed help facilities. The first command you should execute when connecting to one of these servers is "info". This will list general info about that server and how to use it. You should then type "help" to list the various commands available. Typing "help" followed by a command name will give you a little more detail about that command. Servers allow searches by call, last name, zip code or city and also provide regular expression filters to trim your searches so you get a reasonable amount of output.

Both these servers are built from a database distributed by Rusty Carruth, N7IKQ. This database currently contains US and Canadian callsigns and it does not contain club calls. A new version of the database is sent around approximately once a year.

There is also an email callsign server at callbook@sat.datapoint.com (The UUCP address is ...!uunet!dptspd!callbook). In the body of the text, say "lookup" followed by callsigns you want to look up. If your mailer appends signature files, you should put a line "quit" at the end of your request (before the signature file). If you want help, put the word "help" on a line by itself. Here is what a request might look like:
help
lookup kc1sp wn4bbj
lookup n0fzd
quit

There is another email callsign server at callbook@n8emr.cmhnet.org. The subject line is the list of callsigns to lookup. All other lines are ignored. This same callsign server can be accessed with packet radio via cbook@n8jyv.#cmh.oh.usa.na. The body of the message should include "REPLY n8jyv!HOME_BBS!CALL" (where HOME_BBS is YOUR home BBS, and CALL is YOUR callsign), carriage return, "CALL call1 call2 ..." (where call1 call2 .... is space separated list of callsigns you want to lookup).

If you are a packet radio station, callserver data is available from REQQTH@WA4ONG.VA.USA.NA, subject line should be up to 5 US callsigns,

separated by spaces. For Canadian calls, use the callserver at
REQQTH@VE3JF.ON.CAN. Body of message is ignored. The server is an
OS interface to the MBL packet BBS using the Buckmaster CD-ROM
callsign database.

The FCC "call sign hotline" at 717-337-1212 is available for those
who wish to listen to the call signs allocated in each group for each
district. This requires only a touch-tone telephone to use.

* FTP access to FCC Part 97 and FCC Amateur Radio question pools
Part 97 is part of the FCC regulations and only applies to the USA.
As of 1/94, a current copy can be found at ftp.cs.buffalo.edu in
the /pub/ham-radio directory.

An ASCII copy of the question pools are available by ftp from
the ARRL e-mail server.

* Lists of radio modifications and extensions
[see also rec.radio.amateur.equipment]
The largest collection of mods data that we know about is kept at
ftp.cs.buffalo.edu in the /pub/ham-radio/mods directory. The
maintainer of this archive strongly encourages all existing
archivers of mods to mirror their collections on this site.
in this way, maintainers will come and go, but the collection
of mods will remain stable and accessible.

There is a packet radio Mods Server. To get the directories, send
a packet as follows:
SP REQFIL@N2IMC.NJ.USA.NA
Subject: MODS\Dir.1
/EX
To get the mod, send to same place, with Subject MODS\Filename.ext.

REMEMBER that any modification is likely to void your warranty and
that these mods are NOT guaranteed to work. This list is supplied
here because it is a frequently-asked question on the newsgroup.

** Can I send ARRL or W5YI electronic mail?
Several ARRL HQ staffers can be contacted via the net. Their e-mail
addresses are available from the ARRL e-mail file server in the
file called "EMAIL".

ARRL requests that you include your postal address (the slow kind) in
case they need to send you nonelectronic material in answer to your
request.

W5YI, a large VEC, can be reached at the following address:
Fred Maia, W5YI 3511297@mcimail.com

** "Why doesn't the ARRL do...?"
If you want the ARRL to do something, tell them! Direct input from a
concerned member (or, actually, any concerned Ham) carries a lot more
weight than hearsay from any source. Their e-mail addresses are

available from the ARRL e-mail file server (see above). They want direct input - that's why those addresses are available.

** What magazines are available for Ham Radio?
Your local ham store may have some, but here's some popular ones (this is NOT a complete list!):
QST, ARRL, 225 Main St, Newington, CT 06111 - basic projects and contesting
CQ The Radio Amateur's Journal, 76 North Broadway, Hicksville, NY 11801 - beginner ham radio articles
73 Amateur Radio Today, WGE Center, Forect Rd, Hancock, NH 03449, FAX (603) 525-4423, email: COMPUSERVE 70310,775 or Internet 70310.775@compuserve.com - more technical ham radio articles
QEX, ARRL, 225 Main St, Newington, CT 06111 - more technical projects
WorldRadio, 2120 28th St, Sacramento, CA 95818, (916) 457-3655. Subscriptions to 201 Lathrop Way, Ste D, Sacramento, CA 95815, (800) 365-SUBS - lots of special interest columns, like QRP, ATV, YL, etc.
W5YI Report, PO Box 565101, Dallas, TX 75356, 1-800-669-9594 - up-to-date information on Amateur Radio happenings, including VE information and statistics

** How do I use the incoming and outgoing QSL bureau?
To use the outgoing QSL bureau, you must be a member of ARRL. In general, you send a bundle of foreign (not States!) QSL cards to the outgoing bureau in Newington, Connecticut, along with a label off of your QST magazine (which shows ARRL membership), along with $2 per pound of cards (approximately 150 cards) or $1 for 10 cards or less.

To use the incoming QSL bureau, you do NOT have to be a member of ARRL. Send one or more Self-Addressed Stamped Envelopes (size 5x7 or 6x9, NO BIGGER, NO SMALLER) with one ounce of postage attached and with your callsign in 3/4" letters in top left hand corner where the return address label would go. If you expect a large quantity of foreign QSL cards, attach extra money or postage with a paper clip; do NOT affix extra postage to envelope. Send the envelopes to the QSL bureau for your callsign area. If your callsign is xx3xxx/5, you would send it to the 3rd call area, NOT the 5th call area. Addresses for QSL bureaus are listed in QST and on the ARRL e-mail server (see below); if you don't have access to a QST magazine, ask another ham. IMPORTANT: BE PATIENT! Turnaround time for a US QSL bureau, not considering foreign QSL bureaus, is about 3 months. Foreign QSL bureaus and hams can be as fast as 2 months or as slow as TEN YEARS, while average is about 6-12 months.

Addresses for the US incoming and outgoing QSL Bureaus are available from the ARRL e-mail server in the files called "QSL-IN" and "QSL-OUT". See the question above

** Are there any news groups for CAP?
There is no news group just for Civil Air Patrol discussions. However,

rec.aviation.misc is appropriate for CAP aviation discussions and for CAP radio information, these rec.radio.amateur.* groups are available. CAP-related files are also stored on the FTP site sunburn.cps.udayton.edu in pub/capital.

** What's the name of the QRP club that issues QRP numbers?
QRP Amateur Radio Club International, c/o Bill Harding K4AHK, 10923 Carters Oak Way, Burke, VA 22015.

See also the file QRP-ADDRESSES on the ARRL e-mail server.

** How do I become a 10-10 member?
10-10 is simply an organization to sponsor the use of the 10 meter band. It was first conceived when propagation was poor on 10 meters, as a method to get more hams to use 10 meters. The past few years have been great for 10 meters worldwide. However, "the bands are closing down" again, and 10 meters will once again be limited more for local communications, except for sporadic band openings, until the next sunspot cycle.

To join 10-10, work ten 10-10 members and LOG each 10-10 number, call sign, operator's name and location. Send the list to your numeric call sign or DX area manager (as shown below), with $5.00 U.S. new membership registration fee ($6.00 for foreign addresses).

10-10 International Area Managers:
USA 1 - Al Kaiser N1API, 194 Glen Hills Rd, Meriden, CT 06450
USA 2 - Larry Berger WA2SUH, 9 Nancy Blvd, Merrick, NY 11566
USA 3 - Chester Gardner N3GZE, 9028 Overhill Dr, Ellicott Cty,MD 21042
USA 4 - KY, TN, FL, VA, NC, SC only
Rick Roberts N4KCC, 7106 Ridgestone Dr,Ooltewah, TN 37363
USA 4 - GA, AL, Puerto Rico only
Jim Beswick W4YHF, 112 Owl Town Farm, Ellijay, GA 30540
USA 5 - Grace Dunlap K5MRU,* Box 445, LaFeria, TX 78559
*summer addr Jun-Oct Box 13, Rand, CO 80473
USA 6 - Dick Rauschler W6ANK, 4371 Cambria St, Fremont, CA 94538
USA 7 - Willie Madison WB7VZI, 10512 W Butler Dr, Peoria, AZ 85345
USA 8 - John Hugentober N8FU, 4441 Andreas Ave, Cincinatti, OH 45211
USA 9 - Jim Williams N9HHU, 240 Park Rd, Creve Coeur, IL 61611
USA 0 - Debbie Peterson KF0NV, RR 1 Box 35, Duncombe, IA 50532
All DX- Carol Hugentober K8DHK,4441 Andreas Ave, Cincinatti, OH 45211

For more info, see the file 10-10-INFO on the ARRL e-mail server.

** How do I join MARS?
To join MARS, you have to be 14 years or older (parental consent required under age 17), be a US citizen or resident alien, possess a valid Amateur Radio license, possess a station capable of operating on MARS HF frequencies, and be able to operate the minimum amount of time for each quarter (12 hours for Army and Air Force; 18 hours for Navy-Marines). Novices must upgrade to Technician within 6 months, else be dropped from MARS. No-Code Techs can apply, provided

they have transmit and receive HF capability for MARS frequencies (they don't need transmit capability for Amateur HF frequencies). For application forms contact:

Chief, Air Force MARS
HQ AFC4A/SYXR
203 W. Losey St. Room 1020
Scott AFB, IL 62225-5219
(618)256-5552 Fax: (618) 256-5126

Chief, US Army MARS
HQ USA Information Systems Command
ATTN: ASOP-HF
Ft. Huachuca, AZ 85613-5000
800-633-1128

Chief, Navy-Marine Corps MARS
Naval Communication Unit
Washington, DC 20397-5161

** How do I join RACES?
Contact your nearest Civil Defense or Emergency Management Agency. The Radio Amateur Civil Emergency Service is a part of a municipal, county, or state government. This does not mean, however, that every such government has a RACES program. If your government does not have a RACES, ask them to refer you to the nearest jurisdiction that does have a RACES program.

** What organizations are available to help handicapped hams?
Courage Center
Handihams
2915 Golden Valley Rd
Golden Valley, MN 55422
(612) 520-0515
ARRL has a Handihams information package (get it by requesting it through 2155052@mcimail.com) and a book called "The ARRL Plan for the Disabled", available at no charge from the ARRL Regulatory Information Branch.

** I am looking for a specific ham, can anyone help me find him?
Rather than sending out a message on Usenet, you might first try the "Radio Amateurs on Usenet" listings, maintained and posted by Mark Salyzyn VE6MGS. The articles can be found monthly on rec.radio.info and rec.radio.amateur.misc. If the copy in your news spool has expired for some reason, you can look up an entry in the list by sending an e-mail to reqnet@ve6mgs.ampr.ab.ca with either of the following commands in the body of the message:
lookup keyword keyword keyword ...
return user@machine.subdomain.domain
(Fill in the proper info for the search keyword or e-mail address.)
An automated server program will reply to your message.

If you have his/her callsign or name, you should also try one of the on-line callservers shown above. This works in most cases. (!!!)

Also try directory assistance from the phone company or the locator service provided by the Salvation Army. A Salvation Army post in your local area may be able to help you. Also, the Quarter-Century Wireless Assn maintains a collection of callbooks going back to "the beginning of time". Their address is: 1409 Cooper Drive, Irving, TX 75061. Also, the Callbook has a dial-in line for accessing new ham callsigns. Try (1-708-234-8011) at 2400 baud.

** Can I post my neat new ham related program on rec.radio.amateur.misc?
This is really not a good idea, since many of the readers receive these newsgroups as mail digests. Posting is also a one-shot thing. If you post and someone missed it, it is gone. A better way would be to announce the existence of your program here, along with information on how to obtain a copy of your program. You can also submit it to one of the FTP archive sites, which will allow the world to access it without you having to mail it to each requestor. If you just GOTTA post it somewhere, post it to more appropriate groups, like comp.sources.unix or alt.sources or comp.binaries.ibm.pc.

** Where can I get ham radio software for my computer?
See the information about Anonymous FTP, e-mail servers, and ham-related telephone BBS's above. For PC-clones, see the KA6ETB HAM-server. For Macintosh computers, see the file SOFTWARE-MAC on the ARRL e-mail server for locations to look.

** Are there Dialup News services or BBSs for Amateur Radio?
There are two major news services for ham radio. Both are run by volunteer hams and provide bulletins of specific interest to amateurs, hence they are perfectly legal to rebroadcast on ham bands according to FCC Regulation 97.111B(6). To lessen the load on the dialup lines, consider getting your local repeater operator to rebroadcast it, or tape record it to play at your favorite HF net.

RAIN (Radio Amateur Information Network) is produced by Hap Holly, KC9RP, located in Illinois. The news is typically updated 8am CST Fridays. Phone numbers are 1-708-299-INFO (299-4636) and 1-708-827-RAIN (827-7246).

NEWSLINE is another, produced by Bill Pasternak, WA6ITF. Donations for NEWSLINE are accepted at Newsline Support Fund, c/o Dr. Norm Chalfin K6PGX, Pasadena, CA 91102. Phone numbers are:
Chicago 1-708-289-0423
N.Florida 1-407-259-4479
West Palm Beach 1-407-965-1234
Los Angeles 1-805-296-2407 (Instant Update Line)
Los Angeles 1-213-462-0008
NYC 1-718-353-2801
Ohio 1-513-275-9991
Seattle 1-206-368-3969

** Where can I find VE sessions in my local area?
VE sessions are often announced in the local newspapers, but more often, they are announced by local radio bulletin boards. The local packet BBS will most likely have a monthly updated schedule for VE sessions. ARRL or W5YI can generally be called and asked for local VE sessions as well. Don't forget that you will need the following when you go in for an upgrade: a copy of your current Amateur license; your original Amateur license; any CSCEs (duplicate not required), if applicable and less than a year old; a picture ID, preferably a driver's license, passport or visa; and the VE test fee (approximately $5 right now).

Bart Jahnke, KB9NM, the ARRL VEC Manager (bjahnke@arrl.org) posts a listing of VE exams indexed by state (and some overseas sites, usually at embassies and military bases) to the net every 6 weeks or so. The same list can be obtained from the ARRL e-mail server under the file EXAM-SCHEDULE. Another file of interest is EXAM-INFO.

The ARRL list is the definitive list for ARRL VEC sessions. There are other smaller VECs around the USA. ARRL includes their schedules when the info is available. The other VECs phone numbers are listed with the ARRL info so you may wish to give them a call to check their schedule if they didn't provide it to ARRL.

** Why isn't XXX available electronically?
This is a theme for a lot of common questions. For the "XXX" above, substitute any of the following:
Callbooks
DX QSL Lists
Radio station lists
various publications
and more...

Except for the Callbook (via callsign servers), these are not available because of any of several reasons. Either there are copyright restrictions, royalty fees, or the source just may not have done the work. Also, not everyone that has information has reliable UseNet access.

** I'd like to volunteer to help ham radio through electronic information services like those mentioned in this FAQ list. Where should I start?
This FAQ would not be complete without a reminder that useful resources on the net do not grow on trees, they are the work of many dedicated volunteers. The rec.radio.amateur.* newsgroups are very fortunate to have quite a number of such volunteers providing everything from FAQ lists to telnettable callsign servers. This doesn't mean, however, that there isn't room for more information and services from additional volunteers. One such service would be more detailed FAQ lists for the recently--created special-interest rec.radio.amateur.* newsgroups (such as those for antennas, homebrew electronics, equipment and ham radio in space) to supplement this general FAQ.

Recently an electronic mailing list for amateur radio FAQ maintainers, archive custodians, service providers, and other volunteers was set up. It is the rec.radio.amateur.* Working Group (rra-wg). Anyone with a sincere interest is welcome to subscribe by sending E-mail to rra-wg-request@amdahl.com. The readers of that forum would be more than happy to provide advice and guidance with regard to an existing information project, or even suggest a new one to fill a currently-unmet need.

# 4690. rec.radio.amateur.misc Frequently Asked Questions (Part 3 of 3)

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-22 06:26:56 UTC

Rec.radio.amateur.misc Frequently Asked Questions
Part 3 - Amateur Radio Advanced and Technical Questions
------------------------------------------------------------------------------

Questions discussed in Part 3: (dates indicate last modification)
** What are the different US amateur classes and what can each of them do?
(pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (10/94)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US?
(9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another
country or if I am a FCC licensed ham who wants to operate in another
country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what
do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** On what frequencies do JPL and GSFC retransmit the shuttle audio?
(10/92)
** Can I take my HT on an airplane and operate it if I get the permission
of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 3--

** What are the different US amateur classes and what can each of them do?
Novice - has CW (Morse code) privileges on 4 HF bands (80, 40, 15,
and 10 meter), Voice privileges on 10 meters, and privileges
on 2 VHF/UHF bands (220 MHz and 1290 MHz).
Required are 5 wpm Morse code test and 30-question Novice test.
```

Technician - has full privileges on all VHF/UHF bands above 30 MHz.
Required are Novice test and 25-question Tech test.
Technician may access Novice HF bands by passing the 5 wpm Morse
code test.
General - has all Technician privileges, plus larger access to more
HF bands, including CW and Voice on 160, 80, 40, 30, 20, 17, 15,
12, and 10 meter bands. A General class amateur can give Novice
tests.
Required are 13 wpm Morse code test, Novice, Tech and 25-question
General test.
Advanced - has all General privileges, plus wider band access on 80,
40, 20, and 15 meter bands. An Advanced class amateur can
also become a VE and give tests to Novice and Tech tests.
Required are 13 wpm Morse code test, Novice, Tech, General and
50-question Advanced test. The Advanced test is the most difficult
of the five written tests.
Amateur Extra - has full privileges on all amateur bands. An Extra
can become a VE and give all amateur tests.
Required are 20 wpm Morse code test, Novice, Tech, General,
Advanced and 40-question Extra test.

** What is the best way to learn Morse Code?
This is becoming an increasingly common question as many "no-code"
Technicians realize they can add more privileges to their license if
they learn Morse Code. The following list of suggestions should
be helpful in finding ways to approach the effort.

* Listen to code at a rate faster than you can copy.
* Participate in Novice-Roundup and/or Field Day. Practice whenever
you get the chance!
* Avoid the "deciphering" plateau around 5 WPM and and character
plateau at 10 WPM by listening to the fast Farnsworth-paced
"beat" of each letter and the "beat" of common words. (See the
question on Morse code speed for more information on Farnsworth
pacing.)
* Practice to develop a "copy buffer" so you copy about 5 characters
behind. (This is not easy but it's how the higher speeds are done.)
* Practice both with headphones and "open-air" copy as the code test
may be in either format. (If you only practice one, you may fumble
on the other.)
* Most of all, don't give up! Recognize when you reach plateaus
and keep trying until you break through them.

** What is the standard for measuring Morse code speed?
The word PARIS was chosen as the standard length for CW code speed.
Each dit counts for one count, each dash counts for three counts,
intra-character spacing is one count, inter-character spacing is three
counts and inter-word spacing is seven counts, so the word PARIS is
exactly 50 counts:

```
PPPPPPPPPPPPP AAAAA RRRRRRRRR IIIII SSSSSSSSS
. - - . . - . - . . . . . .
1 1 3 1 3 1 1 3 1 1 3 3 1 1 3 1 1 3 1 1 1 3 1 1 1 1 1 7 = 50
^ ^ ^
^Intra-character ^Inter-character Inter-word^
```

So 5 words-per-minute = 250 counts-per-minute / 50 counts-per-word or one count every 240 milliseconds. 13 words-per-minute is one count every ~92.3 milliseconds. This method of sending code is sometimes called "Slow Code", because at 5 wpm it sounds VERY SLOW.

The "Farnsworth" method is accomplished by sending the dits and dashes and intra-character spacing at a higher speed, then increasing the inter-character and inter-word spacing to slow the sending speed down to the desired speed. For example, to send at 5 wpm with 13 wpm characters in Farnsworth method, the dits and intra-character spacing would be 92.3 milliseconds, the dash would be 276.9 milliseconds, the inter-character spacing would be 1.443 seconds and inter-word spacing would be 3.367 seconds.

** What is the standard phonetic alphabet?
Though no standard phonetics are required on amateur radio, good operating procedures include using the standard phonetic alphabet to help communicate more clearly. The recommended phonetics are those also in use by aviation (internationally by ICAO treaty) and some militaries (in most English-speaking countries.)
alfa bravo charlie delta echo foxtrot golf hotel india juliet kilo lima mike november oscar papa quebec romeo sierra tango uniform victor whiskey x-ray yankee zulu

The numbers are spelled differently to suggest a particular pronunciation. Also, nine was changed to "niner" to avoid confusion with the German word "nein" for "no", though that change is not commonly used by Hams. (Usually you'll only hear "niner" from Hams who are also pilots.)
zero one two tree fower fife six seven eight niner

When first making contact with another Ham, it is a good idea to say callsigns in phonetics to give the other side a better chance of understanding them correctly.

See also: http://aviation.jsc.nasa.gov/alphabet.html

** I'm confused. What do all those abbreviations mean???
AM Amplitude Modulation
AMSAT Amateur Satellite Corporation [see rec.radio.amateur.space]
AMTOR Amateur Teleprinter Over Radio. A more sophisticated version of RTTY. Also used commercially as SITOR (Simplex Teleprinter Over Radio). [see rec.radio.amateur.digital.misc]
ARRL American Radio Relay League
ATV Amateur Television - a way to see who you're talking to!
CAP Civil Air Patrol is a volunteer organization that searches for downed aircraft and missing kids and uses frequencies just

outside of the ham bands and often uses modified Amateur radios
CB Citizen's Band radio, this is NOT part of Amateur Radio and
does not require any license to operate [see rec.radio.cb]
CQ An on-the-air request for a conversation with anyone
"dupes" A dupe sheet is a duplicate check sheet, in matrix format, used
to quickly check that you have not had a "duplicate" contact
with someone (on a specific band or mode) in a contest
Elmer An amateur radio mentor, or "Master Craftsman" to a new ham.
Could refer to anyone, regardless of age or gender.
FCC Federal Communications Commission, the "law enforcers"
FM Frequency Modulation
FieldDay A June activity to practice emergency communications for
24 hours....wives call it 'an exercise in male bonding' :-).
HF High Frequency - 3 MHz to 30 MHz
HT Handy-Talky, a shorthand for "hand held radio"
LF Low Frequency - 30 kHz to 3 MHz
MARS Military Affiliate Radio System, military affiliated Amateurs
who provide free communications for overseas GIs and other
Federal services. MARS operators are licensed under DoD
instead of FCC.
NTS National Traffic System, a way to send radiograms
OF Old Friend, or Old F#$%, used to denote an older ham
OM Old Man, refers to any ham, including female hams
packet computer bulletin boards/electronic mail via Amateur Radio
[see rec.radio.amateur.digital.misc]
PRB Private Radio Bureau, administers Amateur and CB services
QSO One of the Q signals used in Morse code to mean "conversation"
QCWA Quarter Century Wireless Association, membership means you've
been a ham for more than 25 years
RTTY Radio Teletype - older form of computer communications on HF
[see rec.radio.amateur.digital.misc]
SAREX In Amateur Radio talk, Shuttle Amateur Radio EXperiment, a
chance to talk to astronauts in space. In CAP talk, Search
and Rescue EXercise, practicing for the real thing.
[see rec.radio.amateur.space]
SK Silent Key, a nice polite way to say a ham has passed on "to
that great antenna farm in the sky"
SSB Single Side Band - need less band width than AM or FM
SSTV Slow Scan TeleVision - REALLY slow, low data rate, typically
used on the lower frequency bands
SWL shortwave listening [see rec.radio.shortwave]
UHF Ultra High Frequency - 300 MHz and above
ULF Ultra Low Frequency - 30 Hz to 300 Hz
VHF Very High Frequency - 30 MHz to 300 MHz
VLF Very Low Frequency - 300 Hz to 30 kHz, audio frequencies
WARC World Administrative Radio Conference, a summit meeting that
occurs every few years, required by international treaty to
determine how the spectrum get sliced up to all vying
communications services (last one was in 1992)
XYL eX-Young Lady, or wife

YL Young Lady, non-ham girlfriend or female ham
2m Shorthand for "2 meters" (144-147.995 MHz), which is a reference to the wavelength of a common Amateur frequency band used for local communications

** What do all those "tones" mean?
Sub-Audible Tone: A low tone that you're not supposed to be able to hear. It's used as a "PL Tone." PL is "Private Line", a trademark of Motorola for their implementation of CTCSS (Continuous Tone Coded Squelch System). Basically, the transmitter sends the signal with the Sub-Audible tone and the receiver only opens when it hears signals with that tone. Signals without the proper tone are ignored. This is useful for "closed" repeaters, or for repeaters on the same frequency that have overlapping geographic areas.
Tone encode refers to the feature of providing the tone on transmit. Tone decode refers to the feature of responding to the tone on receive. Tone squelch refers to all of the above. DTMF refers to Dual Tone Multi-Frequency, or "Touch Tone" which is a trademark of AT&T. DTSS probably means Dual Tone Squelch System and refers to the feature of providing a predefined sequence of Touch Tone digits to open the repeater for transmit. DTSS is an alternate method from CTCSS, which provides a way to use a "closed" repeater even if your radio doesn't do Sub-Audible Tones.

** Where can I learn more about Amateur Radio if I live outside the US?
First, check if there is a Ham Radio-related newsgroup specific to your country. See the country-specific newsgroups in "the rec.radio.* newsgroups" in Part II of this FAQ.

Also, write to the ARRL and ask. They can usually tell you how to get a license in your country. See also the ARRL e-mail server. (Details are in Part 2.)

If you know of any location where this information is available electronically, whether by an e-mail server, anonymous FTP, or a contact person, please mail it to us so we can include it here. Send it to hamradio-faq@amdahl.com.

** How can I get a "reciprocal license" if I am a licensed ham from another country or if I am a FCC licensed ham who wants to operate in another country (on vacation)?
Editor's note (11/92): the regulations affecting this question are being changed. Contact your local Volunteer Examiner (VE) and ask about a VE 60-day pass. More details will be included in future revisions of the FAQ.

This paragraph is soon to be obsolete:

You need to submit a FCC Form 610-A to the FCC, PO Box 1020, Gettysburg, PA 17326. They will then send you a reciprocal permit for alien amateur licensee (FCC Form 610-AL). You must be a citizen of a country with which the United States has arrangements to grant

reciprocal operating permits to visiting alien Amateur operators.

This information is still current:

For FCC licensed hams operating abroad, the following guidelines
apply:
* A reciprocal license is required in all foreign countries (that have
a reciprocal operating agreement with the US), except Canada, where
the FCC license is automatically valid.
* Send a SASE to ARRL Regulatory Information Branch, telling them
which country you are going to visit and they will send you the
info and an application form. Foreign hams can likewise request
information from their national Amateur radio society.
* Submit your application with a certified copy of your Amateur
license (ie, notarized copy), and fee if applicable (use a bank draft
of a bank that does business in that country) to the appropriate
licensing administration of the foreign country. Processing may
take 30 to 90 days.
* If less than one month, you could try sending the application and
pick up the permit upon arrival in that country.
* Most countries will not allow you to bring communications equipment
into their country without a license or permit. If you applied, but
haven't received the permit yet, show the copy and your FCC license
to the customs officer, however, the equipment may still be held at
customs until your departure.
* Be sure to use only those frequencies covered by your FCC license
which are also used in the foreign country, unless otherwise
authorized.

See also the file RECIP-OP on the ARRL e-mail server. (See Part 2.)

** My apartment or housing complex does not allow outdoor antennas, now what
do I do?
[see also rec.radio.amateur.antenna]
First of all, don't despair. Many hams have similar problems. Many
books offer advice for the growing group of hams that cannot put up
antennas. Some options are:
* Install an "invisible" antenna made of magnet wire.
* Disguise an antenna as a flag pole.
* Install an antenna in the attic.
* ASK the apartment manager. You may find they will let you put up
something as long as it "is invisible" or "doesn't disturb your
neighbors" or "doesn't attract lightning".
* Operate primarily from your car.
* If the restriction is due to local ordinance, you may have relief
via PRB-1. Meet with the local government and seek an informal
compromise. It is possible to win in court...but it's expensive and
time consuming.
* If you are restricted by "covenants" attached to the deed of your
home, your options are severely limited. Covenants are considered
to be private, voluntary contracts between individuals and are

outside of the intended application of PRB-1. In many cases, you
can petition the Homeowner's Association for an exception. Sometimes
you can win in court on the basis that other violations of the
covenants by others without action taken constitutes abandonment
of the agreement.
* For further information, contact the General Consel's office of the
ARRL, 225 Main St, Newington, CT 06111.

See also the file ANTS-INDOOR on the ARRL e-mail server.

** I got TVI...HELP!!!
Here's some hints on Television interference, but this is not a
complete list. There are also books on the subject available from
ARRL.
* If cable TV is an underground feed, look for central distribution
box. Check for a grounding rod.
* Try installing torroids on the cable TV cable close to the TV, and
maybe torroids on the AC cord as well.
* VCRs are notorious for RF leakers, try disconnecting the VCR.
* Check to see if interference is better or worse when cable is
disconnected and you use rabbit ears instead. It could be the
cable company's problem!
* Calling the cable company may get results, since they are also
responsible for RF leakage from their equipment. However, they
are very often obstinate. Good luck! Try some or all of these
suggestions before calling the cable company:
1. Log the interference, noting geographical location, frequency,
and characteristics.
2. Bring it to the cable company's attention in writing, preferably
addressed to "Chief Engineer", or "Technical Staff".
3. Don't be accusatory, instead ask for assistance in resolving
the problem. Try to work it out with someone technically
knowledgeable.
4. Do mention your "licensed radio system", but try not to be too
specific about "ham" or "CB" unless requested.
* Try moving the radio antenna further away from the TV sets. Make
sure the SWR is LOW.

See also the series of files on the ARRL e-mail server on various
aspects of electromagnetic interference. The filenames start with
"EMI-" like EMI-CATVI (cable TV), EMI-GEN (general notes on EMI),
EMI-AUDIO (interference to audio devices), etc.

** On what frequencies do JPL and GSFC retransmit the shuttle audio?
[see also rec.radio.amateur.space]
Station VHF 10m 15m 20m 40m 80m Video
WA3NAN 147.45 28.650 21.395 14.295 7.185 3.860
W6VIO 224.04 21.280 14.282 7.165
K6MF 145.585 7.165 3.840
W5RRR 146.64 28.495 21.350 14.280 7.227 3.850
W6FXN (temporarily out of service - looking for new frequency)

KA9SZX 146.88 426.25
K4GCC 146.94
WA4VME 145.17
W6TRW 145.32

All frequencies are in MHz. Use FM on VHF, USB on 10-20m, LSB on
40-80m.
WA3NAN - NASA Goddard Space Flight Center (GSFC), Greenbelt, MD
W6VIO - NASA Jet Propulsion Laboratory (JPL), Pasadena, CA
K6MF - NASA Ames Research Center (ARC), Moffett Field, CA
W5RRR - NASA Johnson Space Center, Houston, TX
W6FXN - Los Angeles, CA
KA9SZX - Champaign-Urbana, IL
K4GCC - Titusville, FL (near or at Kennedy Space Center)
WA4VME - Melbourne, FL (near or at Kennedy Space Center)
W6TRW - TRW ARC, Redondo Beach, CA (shuttle audio may be overridden
by repeater usage)

** Can I take my HT on an airplane and operate it if I get the permission
of the captain?
Technically, maybe. But don't count on it. In general, you can't use
a radio or scanner on an airline (or charter) *unless* the airline
allows it and the pilot-in-command (PIC) determines that it will not
interfere with the instruments and radios on that specific aircraft.
Very few US airlines allow passengers to use radios so be ready to
disconnect the antenna when you ask. (Don't even ask to transmit.)
For reference (in the US) the pertinent portion of the Federal Aviation
Regulations (FARs) is Part 91, paragraph 91.21.

Due to airport security, you may have a little difficulty carrying the
HT (or any electronic equipment) onto the airplane. Generally, you
can appease the security guards, simply by showing that the unit is
operational and doesn't have a bomb inside. For a radio, just turning
it on and opening the squelch satisfies them. Expect more difficulty
during periods of increased security.

On a private airplane, it is legal to operate an amateur radio if you
have the permission of the PIC. It is still possible for the radio to
interfere with the plane's navigation or communication equipment, so
be sure to ask first. Always obey the requests of the PIC. He knows
his airplane and radios better than you do.

** How do I modify my current Amateur license?
To modify your license (change of address, change of station location,
change of name, renewal, or even change of callsign), submit an FCC
Form 610 to the FCC. Forms are available from the FCC or ARRL or a
local VE session or ham radio store. Do NOT use a photocopy. Check
off the appropriate boxes, fill in the new/changed information, SIGN
THE FORM, and attach a copy of your current license (or a brief letter
of explanation for its absence, ie, "my dog ate it"). NOTE: If you
check the box to change your callsign, YOU WILL GET A NEW CALLSIGN,
even if all you wanted was to supply a new address; if you want to keep

your callsign, DON'T CHECK THAT BOX. Send the form to FCC, POB 1020, Gettysburg, PA 17326. Turnaround time (for CURRENT licensees only) is about 2-4 weeks.

ANY ham can apply for a new callsign (this is different from the past where you can only get a new callsign if you move or upgrade). You can't specify WHICH ONE you want, a new one comes from the same pool as new licensees for that class of license. The callsign is based on your mailing address. For overseas military and civilians, be sure to specify a station location that is within FCC jurisdiction.

New licenses are for 10-year terms. If you apply for renewal before its expiration date, the expired license is valid for 60 days after expiration to allow for the new license to arrive. You have up to 2 years after expiration (5 years for an old 5-year license) to renew before re-examination is required (but you can't operate with an expired license). You will lose your current callsign after 1 year after expiration if you don't renew.

For more information on FCC Form 610, see the file FCC-610-INFO on the ARRL e-mail server. (See Part 2 for details.)

** I'm confused about XXX, should I ask the FCC?
[see also rec.radio.amateur.policy]
Whatever "XXX" is in this case, the overwhelming ARRL and net opinion is a resounding "NO!", at least not as a first step. Amateurs are generally very law-abiding people and have historically written the FCC asking for clarification on some operating practice or another. This is a very dangerous practice, for several reasons.

Most amateur radio regulations (contained in Part 97) are generally very loosely-worded, so as not to restrict experimentation and new techniques. But asking the FCC for a clarification will set in motion the process of "clarifying" it for everyone (i.e. new rulemaking.)

Examples of such restrictive rulings include varying topics like when Hams can help non-profit agencies or effectively forcing packet BBS sysops to screen messages before forwarding them. They were the result of well-intentioned questions by Hams that forced the FCC to make a ruling where they previously allowed the amateur radio community to police itself.

Under all circumstances, it is better to first read the rules yourself. Then, if there's a problem, ask your national amateur radio organization (such as the ARRL in the US) which can give qualified advice about interpretation of FCC regulations. Organizations like the ARRL also have the influence to ask the FCC informally, without forcing a ruling.

Even if asking the FCC doesn't result in a restrictive ruling, it is generally a good idea to not overburden an under-staffed and under-funded government agency with a lot of correspondence. The Amateur Radio Service has traditionally been a low-workload "hands-off" service, and has enjoyed a wide latitude from the FCC. Please don't

ruin this image for your fellow amateurs.

For more discussion on how and when to contact the FCC, see the file FCC-CONTACTING on the ARRL e-mail server. (See Part 2 for details.)

** Is there any information on antique radios?
Antique radio classifieds: ARC, PO Box 802-B6, Carlisle, MA 01741 - old radios, TVs, ham equipment, 40s and 50s radios, telegraph, books, etc.
Hallicrafter Service manuals: Ardco Electronics, PO Box 95, Dept Q, Berwyn, IL 60402
Antique Wireless Association, Bruce Kelley, W2ICE, Route 3, Holcomb, NY 14469 - sponsors the Wireless Museum

** Where can I buy vacuum tubes?
Kirby, 298 West Carmel Drive, Carmel, IN 46032 (1-317-843-2212)
Antique Electronic Supply, Box 1810, Tempe, AZ 85281 (1-602-894-9503)
Fair Radio Sales, Box 1105, Lima OH 45802
Fala Electronics, Box 1376-1 Milwaukee, WI 53201
Southern Radio Supply, 1909 Tulane Ave, New Orleans, LA 70112 (10504-524-2343)

See also the file VACUUM-TUBES on the ARRL e-mail server. (See Part 2)

** What do I need to get started in packet radio?
[see also rec.radio.amateur.digital.misc]
Packet radio is a digital form of communication using radios. There are OTHER digital forms, as well, like CW, RTTY and AMTOR. To use packet radio, you'll need a radio (2 meters and 70 centimeters are most popular), a box that converts radio signals to digital signals that a computer can understand (called a TNC or terminal node controller) and a computer or terminal. For some computers or TNCs you may need special software as well. However, most TNCs and computers get along quite well with just a terminal emulator software package. Most personal computers can be interfaced to use with packet radio. Since there are many digipeaters, generally even an HT will work with packet radio.

Your first source of information on Packet Radio should be the rec.radio.amateur.digital.misc newsgroup. It has its own regularly-posted FAQ that goes into much more depth on the subject than this one can. See also the mailing list and archives info in Part 2.

For more information on packet radio, you might try TAPR (Tucson Amateur Packet Radio), PO Box 12925, Tucson, AZ 85732 (602-749-9479).

See also the files PACKET-INTRO, PACKET-NEW, and PACKET-GLOSSARY on the ARRL e-mail server or the directory /hamradio/packet on the KA6ETB e-mail HAM-server. (See Part 2.)

** What do I need to get started in satellite communications?
[see also rec.radio.amateur.space]
For more information about Amateur Satellite Communications, try

AMSAT (Radio Amateur Satellite Corporation), PO Box 27, Washington, DC 20044 (301-589-6062). They also have an international net on Sundays on 14.282 MHz at 1900Z.

ARRL publishes a book on this subject: The Satellite Experimenter's Handbook. Ham Radio stores in your area may either have it or be able to order it. Or you can order it direct from ARRL.

See also the contents of the directory /hamradio/satelite on the KA6ETB e-mail HAM-server. The ARRL e-mail server has a bibliography on satellite materials in the file SATELLITES-B.

** What is available to get started in ATV, SSTV and WEFAX?
This is a large subject area in itself. Amateur Television (ATV), Slow-scan TV (SSTV), and Weather FAX (WEFAX) all deal with transmitted pictures. (ATV includes moving pictures and audio just like your household TV.)

Equipment is available to interface to most common microcomputers including PC clones, Amigas (which are prominent in most video applications anyway), Atari ST, and others. (At last check, we didn't see Macintosh on the list.) There are also a handful of publications on the subject.

All this information is available via FTP in the /pub/ham-radio directory at ftp.cs.buffalo.edu. (See Part 2 for more information on FTP.) The file called sstv_wefax_info is maintained by John Langner WB2OSZ (johnl@avs.com).

The ARRL e-mail server contains an introduction to SSTV in the file SSTV-INFO. (See Part 2 for more information on the ARRL e-mail server.) There is a bibliography of ATV articles from QST in the file TV-B. (See Part 2 for details.)

The KA6ETB e-mail HAM-server has files on SSTV and WEFAX in the directory /hamradio/sstvfax.

Another resource is the regularly-posted UseNet Elmers Directory. The list contains a volunteer Elmer who can help with ATV, SSTV, and WEFAX questions.

** What are these contests I sometimes hear, and how do I participate?
Dozens of contests are held each year, usually at weekends, and can provide useful operating experience. They typically last for 24 or 48 hrs, and are usually on SSB or CW only (the Russian CQ-Mir contest is on both modes at the same time). You can participate by making one QSO or several thousands. In most contests you send a signal report (traditionally 59 or 599) followed by a number that is different for different contests - the most common one is a serial number (so you send 599 001 for your first QSO, then 599 002 etc). The exchange may, however, be your age (All Asian contests), your CQ or ITU zone (CQWW and IARU contests, respectively), your state (ARRL contests) or something else. Read "Contest Corral" in QST for the rules for all

major contests - the more serious contester may wish to subscribe to the National Contest Journal, or join the e-mail contest mailing group (write to Trey, WN4KKN, at garlough@tgv.com). Knowing the rules can prevent embarrassment - you will get a cool reception if you are a W or VE and call a W/VE in the ARRL contests, since they can only work non-W/VE stations. Otherwise, QSOs made in contests are just as valid for DXCC (DX Century Club - more than 100 contacts), WAS (worked all states) and other awards as are 30-minute ragchews. Although not strictly a contest, the annual Field Day provides very useful operating experience under less than optimal conditions and is highly recommended for new operators - check with your local club for their Field Day plans some weeks before the (late June) event.

For more information on contests, the ARRL e-mail server has the following files: CONTESTS-93 (as of this writing, substitute current year), CONTEST-LOGS (for contest log formats), FORM-10M (10m contest entry form), FORM-VHF (VHF contest entry form), and others.

I used just a plain old radio shack 1458 and it worked fine.....minor wiring
changed due to pinout difference required.

Problems I ran into are results of my 286-12Mhz machine not being fast enough

[woes with attic antenna deleted]

That sounds pretty normal for evenings this time of year, this time of the sunpot cycle. 80 meters is going to be by far the hottest band. Before you start changing the antenna, listen at different times of the day and night for a few weeks and get a feel for the propagation of the different bands.

If your tuner is happy, the larger antenna has better capture than a smaller one. All you'd achieve by shortening the antenna is to reduce the received strength of the signals on 80 meters. That would make 40 sound better by comparison, but that's not really what you want to do.

>radio a medium of communication.

The Amateur Radio Service is more than just a hobby. It's that just a
hobby attitude that's damaging to amateur radio IMHO. 97.1 defines
the purposes of the service, and "hobby" isn't one of them. Providing
emergency communications *is* one of the purposes of the service,
along with self training and advancing the radio art. What we are
discussing here is use of amateur radio for emergency communications.

>Finally, it is illegal to use amateur radio to circumnavigate a wireline
>carrier....i.e. you can't use an amateur phone patch to avoid long
>distance charges etc.

You might want to get a *new* copy of Part 97. That provision was
removed from the rules some years ago.

>ham community?

For the amateur groups, I believe the answer to your question is yes.
These groups are distributed in many ways beyond the regular usenet
type distribution, and yelling "read the FAQ" simply isn't a good
alternative for many people. Those long posts are filtered out of
several of the distribution channels, many participants don't have
ftp access to the net, and many of the systems with which they are
accessing the group don't have history mechanisms or archives. For
many, especially beginners (read potential recruits), a short to the
point answer is better than brusquely telling them to wade through a
FAQ they may not even be able to access.

>And, you do have blanket immunity to do what is needed, in an emergency.

Sounds more like you *don't* have blanket immunity by your own example.
You just got off because the *particular* judge was unimpressed with the
case brought against you. Your example would fit the Part 97.403 criteria
for a legitimate emergency situation, but that doesn't waive prosecution
under other statutes. The fact that you drew a judge with some common
sense is just a fluke. In other cases, people have been convicted under
these types of statutes. Suppose the prosecutor of your case had won the
judgeship in the last election. Where would you have been then?

# 4701. SUMMARY, Dog radio fence and amateur radio, Compatible?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-22 13:08:28 UTC
From: David_Bourque@UB.com
Message-ID: <9412221308.AA8671@smtp.UB.com>
Source record: 254542

I've been asked by several for a summary post. Well, here it is. I haven't gotten many replies but all of them seem positive. Here is a couple of captions from some of them.

I put one in last summer and have had NO problems with it at all. Followed the directions with respect to grounding, etc. I also use a 80m horizontal loop that roughly is parallel to the dog's wire and have had no problems. I work 160 thru 440 and have had no problems so far. BTW, the system really works to train the dog not to stray.

I have both. Dog w/radio fence and a ham radio station. I haven't noticed any unusual interference on the ham bands that could be attributed to the radio fence,

..500khz......and it is FCC certified....Have not read any info about ham interference either way.....

Sorry there isn't more but that is about as good as it gets.
Thanks to all those that did respond.
Best of seasons greetings folks.

# 4702. Need help with QSLing CIS republics

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-22 13:36:57 UTC
From: eckman@eos1.larc.nasa.gov
Message-ID: <3dbvdp$rgs@reznor.larc.nasa.gov>
Source record: 254543

I have a few questions regarding QSLing the CIS republics that I
hope someone may be able to help me with.
Has anyone had any recent success QSLing with some of
the southern CIS republics like Azerbaijan and Georgia? I'm
aware that there is ethnic/civil strife in both areas and mail delivery
may not be terribly reliable. But, I would think that cards addressed
to hams in the capitals (Baku and Tbilisi) might have a reasonable
chance of getting through. I've tried a few cards over the years to
UD6GF and UF6FJ (EX1FJ) who used to be very active on the bands.
Anyone know if either of these folks still resides in their respective
republics? The '95 international callbook is all but useless for a
majority of the CIS republics.
On a somewhat related note, I've been trying for a few years to verify
contacts made to Macedonia. I've sent a few direct cards to 4N5JA
(now Z31JA) via the YU5XTC route that he always quotes on the air. Has
anyone had any success with this route? I realize, of course, that postal
service to Macedonia is probably not 100% reliable and there's always the
problem of theft. Any hints on how to address the letter? Do IRCs
work in Macedonia? I've tried both greenstamps and IRCs.
Thanks in advance for any help.

In a previous article, as041@FreeNet.Carleton.CA (Robin Ludlow) says:

>
>Just a long shot, Stan, but YYZ is the airport code (baggage tags etc.)
>for Toronto Pearson International Airport. Rush, being a Toronto-based
>group and where lead singer Geddy Lee lives, perhaps just tossed it into a
>song because they were seeing these tags on their bags so much.....
>--

As a long-time Rush fan, I can tell you Robin is correct. They wrote the beat of YYZ into the song in "honor" of the airport baggage code. Very noticable in the intro of the song, as "YYZ" is played on unaccompanied triangle. For you musicians, YYZ is an 11-beat phrase giving the intro a single-measure time of 11/8, or two measures of 4/4 followed by 1 measure of 3/4, depending on how you want to count it.

# 4704. Enough Already! I want 80m! *UPDATE*

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-22 14:01:55 UTC
From: tigger@prairienet.org
Message-ID: <3dc0sj$t2e@vixen.cso.uiuc.edu>
Source record: 254546

Hi, everybody. A while ago, I put a note in here asking for help on getting an 80m antenna in a small city lot. I wanted to work DX with it, and I knew it was going to be a compromise antenna.

After much debate, I installed a ground-mounted homebrew 1/4 wave wire vertical (67'), with an 8' ground rod and 4 radials, approximately 1/8 wavelength long. I simply laid the radials on the ground...I didn't bury them.

Since putting up this antenna on 20 October, I've worked 38 states (including Alaska) and 58 countries with it, all with just 100 watts. Just worked Japan on 80m this morning (FINALLY!) and recieved a 569 report.

It's sure not performing like a four-square or a rhombic, but I'm quite pleased with the results. Yes, Virginia, you CAN work DX on 80 with minimal antennas and no amplifier. It takes patience, though, because 9 times out of 10, you're NOT going to break the pileup.

Gotta go... HL5BVQ was just spotted on 3502.7.

73 & DX,
Sean

## 4706. What's the fastest/cleanest PL decoder?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-22 14:28:43 UTC
From: dcmartin@saturn.acs.oakland.edu
Message-ID: <dcmartin.788106523@saturn.acs.oakland.edu>
Source record: 254574

One of the things that has bother me the most about our club repeater is the PL decode response time, both time to detect and time to release. The delay to release make that nice squelch tail sound that use you hear every time two-way radios are used on TV, but not the sound I would prefer my repeaters make. I'm currently using Com Spec TS-32 for the all the receivers in the system. I've modified them a little to speed them up, but I'm still not happy. What's the best solution??

SB QST @ ARL $ARLB101
ARLB101 2400-MHz comments filed

ZCZC AG66
QST de W1AW
ARRL Bulletin 101 ARLB101
From ARRL Headquarters
Newington CT December 22, 1994
To all radio amateurs

SB QST ARL ARLB101
ARLB101 2400-MHz comments filed

The ARRL has filed comments on an FCC notice of proposed rule making, in ET Docket 94-32, a proposal to reallocate a block of spectrum from federal government to commercial use. Some of that block includes parts of the 2400-MHz band shared by Amateur Radio on a secondary basis with the government.

The ARRL asked that the Amateur Service be given primary allocation status at 2402 to 2417 MHz, and that it be given at least co-primary status at 2390 to 2400 MHz.

The League also said that because a previous government study had recommended the 2400 to 2402 MHz segment for amateur use, it would be desirable to make the entire segment 2390 to 2450 MHz amateur primary.

The ARRL also said, in a 29-page Comment, that any fixed or mobile service station that is granted an assignment at 2390 to 2400 MHz, ''must be'' required to protect the Amateur Service from interference and must tolerate any interference received from amateur stations.

The League requested that the FCC not make any additional allocations in the 2390 to 2417 MHz band and, instead, grant Amateur Radio primary allocation status in that band.

More information was in January, 1995 QST, page 91. The reply comment deadline in this docket is January 3, 1995.

# 4709. Re: Help wanted: Power connection standards using Molex connectors

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-22 15:02:10 UTC
From: carndt@netcom.com
Message-ID: <carndtD17wFM.KHM@netcom.com>
Source record: 254545

I've been using this standard for a lot longer than it's been an ARRL one. (>15 years) It has worked well over that period, and all of my 12 VDC equipment has been converted (amateur, lights, scanners, gel cell packs, and various motorhome accessories). I have Molex extension cables and distribution boxes. The funny thing is, I was trying to remember where I got started using Molex connectors this way. They were used as the power connector on my Motorola CB back then.

# 4713. MSA685 amp for my Startek frequency counter

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-22 16:00:24 UTC
From: vaillan@ireq.hydro.qc.ca
Message-ID: <D17z4o.7A0@ireq.hydro.qc.ca>
Source record: 254486

I blew up the first amplifier (MSA685) in my Startek 2500 frequency counter.
It is a four pins round UHF amplifier. Startek don't want to sell the
component only, they want me to send in the counter for a flat rate repair...
Does anybody know who make it and who sell it?
I can fix it myself.
Happy Holidays!

>up, but I'm still not happy. What's the best solution??

The best solution to the tail crashes is an audio delay. Using a bucket brigade device, the audio is delayed enough that the control signals have time to positively control the audio mute to the transmitter. Some repeater controllers, such as S-Com, offer this as an option. Anti-PL offers some speedup too, but requires your users to do something to their radios, not always easy.

As far as speeding up detect time, the quicker you make it, the more false triggers you'll get. The reason is that you have to open up the PLL loop filter, or envelope filters for that style decoder, to get quicker response. Either choice opens you up to more noise falsing. You really need to allow several cycles, several tens of milliseconds at 100 Hz, to allow a positive lock.

Again, the audio delay can come to your rescue by delaying received audio until the decoder has achieved lock and activates the transmitter COR.

Source record: 254550

Last July I flew to Portland from Harrisburg, and I took both an HT & a Scanner (R1), The HT was prohibited, but the Scanner was fine but not during take off or flight. I have never found a commercial flight in the last 20 years where the Captain has said OK you can use the Transciever. I used to have a WE-800 in the 70's and some Captains would let me listen only. But in most cases I could not even listen. Most airlines today publish the information of what you may operate in the airline literature. Just Ask your ticket agent before selecting the Airline, then you will be well informed before arriving. There is a new set of rules coming down the line which will also exclude the use of any computers on board airlines. I guess the Size of an airborne laptop can cause considerable harm to other passengers. Plus most PC's definatly radiate RF. I will miss the use of my HP Palmtop on the flights.

During the July flight to Portland I got the most pleasure from following the 3 National Weather broadcast frequencies. I always knew exactly where I was by listining to the local cities weather forcast. Most of the time I could hear 2 weather stations, and I was never out of range of at least one weather station. I was lucky in so much as the sky was clear all the way across the United States that day. I enjoyed my window seat and the guided tour courtesy of the National Weather System, more fun than a DX pileup on 20 meters

>For the amateur groups, I believe the answer to your question is yes.

I would agree in general that there are subtle cultural phenomena going
on here that wouldn't occur in say, comp.lang.perl. However, I disagree
that it's for the reasons that you offer.

>These groups are distributed in many ways beyond the regular usenet
>type distribution, and yelling "read the FAQ" simply isn't a good
>alternative for many people. Those long posts are filtered out of
>several of the distribution channels, many participants don't have

>accessing the group don't have history mechanisms or archives. For
>many, especially beginners (read potential recruits), a short to the
>point answer is better than brusquely telling them to wade through a
>FAQ they may not even be able to access.

Let me address these point-by-point:

- Brusquely yelling "Read the FAQ!" is not a proper way to answer
questions.

I agree with you, but that wasn't what I was advocating. My technique
(and the one recommended in the FAQ itself) is to politely E-mail the
answer to the individual, then say, "By the way, there's an excellent
FAQ document, available via several sources, that could help answer
other questions you may have. Let me know if you need assistance
obtaining a copy," much like you would say to an up-and-coming ham,
"Here's how you make a dipole. By the way, there's an excellent
reference called the ARRL Handbook. I recommend you get a copy and read
it. Certainly ask me if you have any further questions," or even to
one's progeny, "You know son, you should probably research your question
here in the dictionary or the encyclopedia, here's how to use it..."
There's lots of ways to do this in a friendly way that won't put off

newcomers. I see a lot of giving people fish, not a lot of teaching how to fish.

- These newsgroups have an above-average number of non-standard distribution channels (e.g. mailing-list, Fidonet, etc.) and the "long" FAQ's get filtered out anyway.

How do you explain the much shorter, pointer articles (like the "How to obtain..." article for the FAQ and the "Info and Administrivia" file for the Elmers list) that describe briefly, but in sufficient detail, how to obtain a copy of the larger document? There's no reason why those shouldn't propagate almost everywhere, yet they seem to be ignored too.

- Not everyone can FTP.

True, but FTP isn't the only way you can obtain the FAQ. The FAQ documents for this newsgroup are available via at least 6 other methods in addition to news (all explained in reasonable detail in the above-mentioned short pointer articles), including Gopher, WWW, WAIS, and several Internet E-mail servers. The overwhelming majority of readers can at least send E-mail.

I think you're describing symptoms, and not root causes (I suspect one of the root causes may be one offered by Jeffrey Angus, one of laziness, as well as an unrealistic expectation of the Internet being an instantaneous "information-please" help desk with no regard to its social context and conventions).

As an interesting side-note, Prodigy has undertaken just the kind of archiving history scheme for FAQ's within its newsreader software that you say that most standard newsreaders lack. In addition to going through some free on-line net-etiquette training as a condition for access, readers can press a "Read the FAQ documents" button on their GUI to retrieve and display any designated information postings for that newsgroup (the definition of "designated information posting" is one that is crossposted both to that newsgroup and news.answers). I haven't seen any Prodigy members participating, so I don't know how well that is working out.

I'm perfectly willing to accept that four years of effort on FAQ documents for this newsgroup have been mostly wasted, but I would like to at least understand some of the reasons *why* it was a failure, not only for my benefit, but perhaps as a warning for anyone contemplating FAQ projects for other non-computer newsgroups.

# 4718. We need a better repeater receiver - who makes the best?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-22 18:03:09 UTC
From: "F. Kevin Feeney" <fkf1@cornell.edu>
Message-ID: <3dcf0t$8g2@newsstand.cit.cornell.edu>
Source record: 254560

Hi,

Our repeater is on a nice hill, which means it has lots of company on the tower. In the old configuration, we used to have the receive antenna up top (140ft) and the transmit antenna about halfway up with one can on each antenna and great RF performance.

In the last 6 years, we've had more and more stuff appear on the hill and have had to add more cans, special traps, etc to the point where the receiver just doesn't hear as well as it used to.

We've used two receivers over the years, a Uniden repeater that was bought about 8 years ago ran for a while, but finally we were forced back to the 'old' gear with a separate receiver, preamp and transmitter because the Uniden kept having receive problems.

Things are stable now (for the moment) but we'd like to get back some of the performance we've lost over the years, and wonder if a good receiver, specifically designed to live in this environment would help. Or maybe the current receiver with a real good preamp in front, optimised to live in the high RF environment.

We've kicked around the idea of homebrewing a receiver - something with a lot of standing current in the front end ala Sounabouy receivers I've seen (which have a transmitting transistor up front with like 50-100 ma of standing current in it to keep linear in the heavy RF environment), and maybe a high level balanced mixer, etc. But given our time constraints, realistically this won't get done for a long time. (but if anybody has some good design info, I'd definately like to see it).

The other problem we are having is capture ratio. Last night the repeater was tied up again with a canadian net from 150 miles off. Local stations could be heard over it, but there was a heterodyne most of the time. My understanding is that modern receivers don't 'capture' as well as the old ones did. We'd like to move towards one that does a bit better job of that while we are changing things.

What we'd like to find is an off the shelf receiver that doesn't cost the entire club treasury that can handle the 25 kw FM station and numerous 150-170 and 450-512 transmitters on the hill, hear well, have decent selectivity, and also have a decent capture ratio. Anybody have any good suggestions? Might a special bombproof preamp be sufficient? (my first thought) Or do we need to rework things from the ground up?

All suggestions gratefully accepted. I know we can send out to the manufacturers for their data (and have started the process) but I figure I'll run into more folks here who have actually done it and found what

works and what doesn't to help keep us from buying another less than wonderful receiver. Also, I'm sure some will suggest old GE/MOTO etc stuff, and we have tried some of them in other spots. We'd prefer to buy (or build) something modern that if necessary we can ship to a factory for support.

Thanks in advance

Kevin, WB2EMS

>The best solution to the tail crashes is an audio delay.

...unless your users are running full duplex radios, in which case this will drive them absolutely nuts.

The best solution, IMHO, is using a Micor squelch circuit to gate the audio going to the transmitter instead of the one built into the radio. You can steal the circuit right out of the Micor book; the IC involved is available as a replacement part from Motorola. This will do away with the squelch tail except in those cases where the user is noisy; if he is, you don't want a fast-acting squelch anyway.

>As far as speeding up detect time, the quicker you make it, the more

All of this is true. It's more a matter of user training than anything else.

>Again, the audio delay can come to your rescue by delaying received
>audio until the decoder has achieved lock and activates the transmitter
>COR.

...but do you really want to do that? This leaves you open to intermod and other crap at the beginning of each user's transmission as repeated.

# 4722. Morse Palindromic Callsigns

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-22 19:34:03 UTC
From: rfm@urth.eng.sun.com
Message-ID: <RFM.94Dec22113403@urth.eng.sun.com>
Source record: 254558

With all the talk of good/bad callsigns, I perked up last night when I heard (but did not work, alas) AA5NN. Note the lovely symmetry of this sign in Morse: if you tape recorded it and played it backwards, it would be the same!

There aren't too many of those in the US. Has to be a 5-land call. Has to be a 2x2. So that means it's one of these (last call sign update I can find is September, so maybe KK5KK has been added, unless it's one of the "verboten" calls because of the Klan.)

Ax5yN x=ABDEFGHIK y= NVUELWHIK (9 signs, only 2 issued so far)
Kx5yK x=ABDEFGHIKLMNOPQRSTUVWXY y=NVUELWHIKFMAOPYRSTDBGXQ (21 signs, but only 8 have been issued)
Nx5yN x,y as above (21 signs, none issued)
Wx5xG x,y as above (21 signs, none issued)

A total of 10 issued out of only 73 possible.

How about DX calls?

I smell a neat word game here: what's the longest Morse-palindrome sentence you can find?

Rich, KO6CL (backwards, that's F???OK)

# 4726. Re: Worst Call Sign

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-22 20:11:02 UTC
From: Hans Brakob <71111.260@CompuServe.COM>
Message-ID: <3dcmgm$h2$1@mhadf.production.compuserve.com>
Source record: 254562

>BAD ONE FOR CW: WB0OMM<

Actually, it's not bad for CW (other than being rather long).

What it DOES have going for it is lots of "power" in the suffix.
Calls with lots of dits in the suffix tend to get "lost in the
noise". Mine (K0HB) is the pits on CW, and I intend to change it
as soon as I can.

>phone. Not everyone has a 2 m rig for you to talk to,...

I disagree. So what if not everyone has a 2M rig, you don't need to
talk to everyone, just to *someone*. Even with the expansion of
cellular service it will be a long time (if ever) before you find
places with cellular service and no 2M repeaters available. Holler
"Mayday" on a repeater and you will get somebody's attention.

No, not if you use the correct amount of delay. The receiver noise
will already have shuffled through the delay before you gate audio
to the transmitter.

: >I have a Yaesu FT-990 located near my PC in my ham shack and am getting some
: >interference from the PC in the radio. I discovered that the monitor is
: >contributing some interference by turning off the monitor.

: Ah, yes, this has become a common problem. With today's PCs having
: clock rates above HF, the PC is no longer the main source of RFI
: for HF rigs, but its harmonics sure tear up VHF/UHF gear. Now,
: the big problem at HF is the monitor. It has fairly high power
: horizontal and vertical sweep circuits, and they generate harmonics
: throughout HF. The only solution is shielding.

I think I would first check to see if the cables might be radiating first.
There are a few ways to do this. If the monitor cables have connectors at
both ends, disconnect the cable. If you still hear noise, the monitor is
radiating. If the noise goes away, you may be able to add ferrite
suppressors to the cable, and/or use a shielded cable, etc.

: Most monitors today have plastic cabinets, and little or no internal
: shielding. You have to fix that. There are two ways, you can use
: copper screen wire, or you can use some of the new conductive sprays.
: I generally use the GC conductive spray. Take the case off the monitor
: and spray the inside of it with the conductive spray.

Always consider the thermal effects of any added shielding. If you use any
metal shielding, it may change the air flow around hot components. You may
inadvertantly fix your EMI problem by burning up the monitor. :-(. Even the
spray-on shielding may have its risks. It is probably more reflective of
heat than is the plastic, so circuits near it may run hotter than normal. If
you do use it, ENSURE that the paint adheres well. If bits of this
conductive coating flake off later, you will have bits of metal floating
about inside your monitor.

: Of course all the cabling should be fully shielded, with metal hoods
: on the connectors, and tightened down for a secure fit. The power
: cord may need to be wrapped a few times through a ferrite to choke
: off any radiation trying to escape that way. Grounding the computer
: and monitor to your station ground may or may not help. Sometimes
: it makes things worse, experiment.

Good advice. I would try all this BEFORE I tried shielding, though.

Source record: 254572

Some information along that came in today's mail from the National Technical Information Service (NTIS) of the US Department of Commerce that I thought you good folks would appreciate.

If you want the 9.2 MB amateur radio callsign database directly from the government, it's available to all. However, the first thing you need is a tape drive and a machine that runs on the Honeywell GCOS SR3000 operating system and have the Honeywell UTL8 utility program available. The second thing you need to have this is $940.00. That's a mere $102 per megabyte, but don't worry. They take VISA, MasterCard, AND ("Don't leave home without it") American Express. If you're in a hurry and want to get if before Christmas, or you just can't wait, "rush service is available for an additional fee." Just call 1-800-553-NTIS.

Now, don't you feel all warm and fuzzy now knowing that your government is falling all over itself to take care of you and provide all that valuable information?

Happy Holidays all!!!

73,

Tony

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 22/2330Z DECEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 22 DECEMBER AND FORECAST FOR 23 DECEMBER - 25 DECEMBER
---
1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 82/23

GOES satellite data for 21 Dec
Daily Proton Fluence >1 MeV: No data
Daily Proton Fluence >10 MeV: No data
Daily Electron Fluence >2 MeV: No data
X-ray background: No data
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
23 Dec 24 Dec 25 Dec
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 23 Dec: 82/23

---
2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 21 Dec
Learmonth 4 2211 2111
Fredericksburg 5 4
Planetary 2 4

Observed Kp for 21 Dec: 1121 2101
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
23 Dec 30 Active to minor storm
24 Dec 25 Active
25 Dec 12 Unsettled to active
COMMENT: IPS Geomagnetic Warning 12 was issued on 21 December and is
current for interval 23-24 December. An increase in geomagnetic
activity is forecast for the period 23-24 Dec, due to a coronal hole.
---
3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
22 Dec normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
23 Dec fair poor poor
24 Dec fair poor poor
25 Dec normal normal fair

---
4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
22 Dec 40 about 15% above predicted monthly values

Predicted Monthly T-index for December: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
23 Dec 20 Near predicted monthly values
24 Dec -10 10 to 20% below predicted monthly values
25 Dec 15 Near predicted monthly values
COMMENT: IPS HF Communications Warning 15 was issued on 21 December
and is current for 24 December. HF comms expected to be intially
good today then gradually declining. Degraded HF comms expected 24 Dec.

# 4740. Radio Waves and Wheelchairs

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-22 23:36:13 UTC
From: n2ayj@n2ayj.overleaf.com
Message-ID: <788139373.134snx@n2ayj.overleaf.com>
Source record: 254495

The following appeared in the Winter, 1994 edition of
"MS-Cellanea", a newsletter of the Mid-Jersey Chapter of the
National Multiple Sclerosis Society:
***
RADIO WAVES MAY INTERFERE WITH CONTROL OF POWER WHEELCHAIRS

Lab tests performed by the FDA showed that radio waves can cause
unintended motion of powered wheelchairs and motorized scooters.
This is known as electro-magnetic interference (EMI). Radio waves
are emitted from antennas of cellular phones, mobile 2-way radios,
walkie-talkies, radio and TV stations, HAM [sic] transmitters,
wireless computer links, microwave sources, and paging transmitters.

If you have an incident where [a] chair or scooter seems to be
affected by EMI, call the FDA's MedWatch at 1-800-FDA-1088 (ask
for form 3500). Also notify the manufacturer.
***

It might not be a bad idea to let the ARRL know as well.
The ham transmitter angle is gnawing because hams provide communications
at many MS walks and bike tours. I'd hate to think we were being
EMI-pests while helping out.

ARLD076 DX news

ZCZC AE74
QST de W1AW
DX Bulletin 76 ARLD076
From ARRL Headquarters
Newington CT December 22, 1994
To all radio amateurs

SB DX ARL ARLD076
ARLD076 DX news

The items in this week's bulletin are courtesy of Tedd, KB8NW, Jim, AD1C, Tomo, JH2PDS/1, Bob, W4VQ, Chod, VP2ML, The DX Bulletin, Bob, W5KNE, QRZ DX, Joe, NJ1Q, and the Tokyo, Japan, PacketCluster network. Thanks.

SPRATLY. K5OVC reports that Robin, DU9RG, is planning to operate as DU0K sometime in April. According to the DXCC Desk, the Philippines are one of several countries with territorial claims in the Spratly group. Any operation from the Spratlys should use the call sign of the occupying authority.

NEPAL and BANGLADESH. Members of the Japan UNICEF Ham Club plan to be on the air through year end starting December 24. From January 1 to 7 they will move to Bangladesh and operate from there. CW, SSB and RTTY will be their modes.

QATAR. Tom, DL9FCQ, hopes to be active January 14 to 27. He favors CW during his evening hours on 40 through 10 meters. QSL via CBA.

PHILIPPINES. Tom, SM0CNS, is signing SM0CNS/DU7 on 80 through 10 meter CW from Cebu Island. He will operate SSB or RTTY on request. Tom hopes to be on 160 meters soon. QSL via the DU QSL bureau or direct to Thomas Bevenheim, Ronda, CEBU 6034, Philippines.

ANTARCTICA. Eddie, VI0ANT, works his radio around his work schedule, but is usually QRV from 0030 to 0300z and again from 1230 to 1700z. Though RTTY equipped, Eddie prefers CW on the low end of 20 meters. He hears NA stations on 40 meters around 1400z but reports getting few answers to his calls. Try the long path heading between 0030 and 0300z. QSL via VK4BMD.

KERGUELEN ISLAND. Pierre, FT5XJ, aka F5NLL, was heard on a DX net December 18. Check 14226 kHz at 1415z.

SOLOMON ISLANDS. Norbert, DJ9RB, and Bernhard, DL2GAC, will be on the air during the second half of January. Action will be on CW, SSB and PacTOR, with special emphasis on the low bands. QSL via their home calls.

TURKS AND CAICOS ISLANDS. Joe, WB8GEX, will sign his call /VP5 from December 26 through year end. He will operate SSB on 160 through 10 meters. QSL via WB8GEX with SASE. Remember that new postage rates go into effect January 1.

EASTERN KIRIBATI. Only three of the original five operators will be active from Christmas Island for the DXpedition slated for December 27 to January 2. Listen for T32J by JR5JAQ, T32A by JA5EXW, and T32X by JA4GXS. For CW try 1806 and 1910, 3506, 7006, 10106, 14006, 18074, 21006, 24896, 28006 and 50110 kHz. SSB will be around 3799, 7070, 14190, 18120, 21290, 24940, 28490 and 50110 kHz. Last but not least, for RTTY check 7035, 14086, 21086, and 28086 kHz. QSL via their home calls.

TUNISIA. Tomo, JH2PDS/1, reports that Karl, DK2WV, will probably not be able to operate as 3V8W this year.

SOUTH GEORGIA. Al, WA3YVN, reports that the SGI trip is a go for January 4 to 19. Before departure to SGI, listen for Al, Jan, WA4VQD, and Vince, K5VT, to be on the air from the Falklands.

EASTER AND SALA Y GOMEZ ISLANDS. Bob, KK6EK, and Carlos, NP4IW, are planning a serious DXpedition to these islands for sometime in August and September of 1995. Permits have been obtained. The calls will be XR0Y for Easter Island and XR0Z for Sala y Gomez Island. The team will probably consist of 24 operators, with some big-time calls in DX and contesting being mentioned. They include KK6EK, NP4IW/6, KA3MUF, KD8IR, W6MKB, ON6TT, WJ2O, AB7BB, K9SJC, AA6KX, K1OCS, K1XM, KQ1F, WA5DAN, KD6ISY, and AA6TT.

QSL ROUTE CORRECTION. Wayne, WB6EQX, reports that he is receiving cards for 9K2MU. The correct QSL Manager for 9K2MU is WA4JTK.

>The reason I bring it up is that today I got a christmas card from the >family of the 7-year old I saved that day. Had I not called on my >(gasp) ham radio that was (illegally modified - shudder!),...

Illegally modified? I suspect not. As far as I know you can modify ham radios to your heart's content (or build your own if you've a mind to). However you are responsible for your emissions and are not normally allowed to transmit out of the ham bands with such a radio.

In your case, having saved the life of a 7 year old I doubt any jury would convict you anyway. Jury members have hearts too and even if you were a bit naughty the resulting life saved goes a long way to protect you. However I would like to emphasize that anybody doing this should be sure that not only is there a real emergency but that no other means of communications would do the job. Most DA's probably don't know about amateur repeaters but if one does he might look to see if you could have used a repeater. I don't know if there was in that case but you ought to try that first if there is one.

Thanks one and all for the answer to the mystery of "YYZ".
Although I 'listen' to Rush from time to time, I can't honestly call
myself enough of a fan to have learned such esoterica. Way cool.

Imagine...I get to ride 17 hours on the bus carrying all the Rush fans
(aka the percussion section) to Toronto when the J.P. Stevens
High School band heads up for competition in May.

Pass the aspirin, please...

>
David - don't worry about it. I've had one of these fences in my yard for
4 years, and the buried wire passes within 20 feet of my tower (and less
than 10 feet from my shack). I'm an active DX'er and contester, and
therefore have run legal limit power on all bands from 160-10 mtrs. My
dogs don't get zapped and their fence doesn't zap my radio. Most of those
fences consist of a low power (milliwatt range) sub-mediumwave transmitter
(usually on around 500 kHZ) that just transmits a carrier that radiates
from a wire buried just below the ground at the perimeter of the area you
want the dog confined to. The output typically is adjusted so that their
receiver picks it up only when they get to within 1-2 feet of the wire.

I have my radio tuned to 500 kHz right now and although I can definitely
hear the carrier it doesn't even dent the S-meter. I think you're quite
safe and your dogs should be too. BTW, the fence works fine - the only
times my dogs (3 of them) have run off is when the power goes down for
awhile or if I don't change the receiver batteries regularly.

F. Kevin Feeney (fkf1@cornell.edu) wrote:

: We've used two receivers over the years, a Uniden repeater that was
: bought about 8 years ago ran for a while, but finally we were forced back
: to the 'old' gear with a separate receiver, preamp and transmitter
: because the Uniden kept having receive problems.
^^^^^^
This is no surprise.

: Also, I'm sure some will suggest old GE/MOTO etc
: stuff, and we have tried some of them in other spots.

You are correct, I will suggest it.

: We'd prefer to buy
: (or build) something modern that if necessary we can ship to a factory
: for support.

It sounds as if you were lucky for a long time at this site, but now
you need to "get serious"
Motorola and GE equipment is designed for such enviornments.
(Micors, MastrII, and EFJohnson CR1010 are among the machines Iv'e had
good luck with)
Dont be unrealistic either, <.250uV sensitivity at a loaded site is damn
near impossible without LUCK.
Factory support depends on your budget, the good stuff isnt cheap, but
the older stuff works great and support is abundant.
On a closing note, make sure you know the nature of your problem,
some problems can be solved with shielding (the good stuff is well shielded)
some require better electronics (again, the good stuff)
but if you have an on frequency intermod problem, new gear isn't going
to help. but I'm sure you know this...

>these types of statutes. Suppose the prosecutor of your case had won the
>judgeship in the last election. Where would you have been then?

I seriously doubt that it would have gone any differently had it gone to trial. There was no way I was NOT going to have a jury, and even if it had gone against me, I would have appealed. You can never underestimate the stupidty or mendacity of any judge or lawyer, but to give you an idea of how the trial might have gone, after it was settled, I was approached by the Chief of Police and the Fire Chief (both subponeaed) and was told after an appology that it wasn't their idea to charge me, and I was also appologized to by the "dispatcher" (the "officer" I allegedly interfered with, although they are not sworn, and so are not covered by that particular statute), that she didn't want any part of it either.

The entire case was brought by the city attorney, who it seems happened to be in the dispatch center at the time, and decided to make more of a name for himself (for political reasons), just before an election. He lost, and the judge in my case found that the city had to pay my legal costs as well, since the case was totally without merit. We finally settled for about $6,000.00.

As I said, do what you have to do. Had I not done what I did, I could (concevably) left myself open for a civil suit, for not doing everything I possibly could to get more help. As an EMT, I have a standard of care, and while I couldn't leave the victim, I had to call for help. Had I not called for help, or left the victim (even if he had lived), I could

be liable for malpractice, abandonment, you name it..

At any rate, I always go on the theory it's easier to get forgivness than
it is to get permission.

: well, adam, you better contact that company and tell them that the FCC
: mandates that they give 911 and emergency calls at no charge. it's in the
: FCC rules and regs. but people are willing to pay, because they don't
: even know about the FCC rules and regs. that service provider should be
: shut down!

Lets run the numbers before we shut em down...if you use less than ten minutes a month of airtime then this is a good plan. There are lots of folks out there with a phone in the glove box paying 35 dollars a month with no usage, they are only interested in the safety factor.

By now we all know that cellular calls to 911 are free whether you are activated or not. Calls to other emergency providers will not go through unless you are signed up with a cellular provider.

If your 911 public safety answering point can transfer your call to anything more than the local public safety , fire or ambulance, you are doing well.

Try calling home or to a hospital or your insurence agent through 911 :^}

Averaged out over a year those 3.50 dollar minutes are cheap. You would have to make over two hours of calls to equal the the standard rates. Of course you will have to run the numbers your self using your local rate plans and usage. I am not in the business ... just want to clear the air

Bob

Hi Debashis, that sure brings back old memories. I was a member of the
IRE while at Texas A&M in the '50s. They merged with the IEEE around
about 1960 and do not exist as an entity any more.

# 4753. Re: Sort of Naive Question about Contests

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-23 04:40:32 UTC
From: tigger@prairienet.org
Message-ID: <3ddkc0$fri@vixen.cso.uiuc.edu>
Source record: 254504

In a previous article, dbraun@scdtintel.com (Doug Braun) says:

>
>Do contestants get credit for QSOs with non-contestants?

As long as the information required for the contest is exchanged, YES.

>If I, a non-contestant, answer a contestant's CQ,
>do I do him any good?
>

As long as you are:

1) Willing to give him/her the information they need, and
2) Understand that they aren't interested in a ragchew (They're in a
contest, remember?), then YES.

>I ask because when I contest is going on, 99% of
>the people are going "CQ contest...", and there's
>nobody else to talk (or type, or tap) to...
>

Actually, many contesters rely on the casual operator...somebody who
might just be poking around a contest, having fun or just playing around
on the bands. If it weren't for folks like that (I like to call them the
"Third Level"), all contesters would be talking to the same people, thereby
creating a very limited number of folks to exchange info with.

If you are a non-contester and there is a contest going on, the best way
you can help them (and have fun yourself, too!) is to:

1) LISTEN to the station for a minute. Can you figure out the contest
exchange by yourself? Is the guy giving a serial number (He works a guy
and says "you're 5-9 number 155," the next guy is "59 number 156," etc.)?
Is he repeating the same exchange over and over to each station
(everybody is "5-9 20" or "5-9 Texas")?

2) Call them. Use your full callsign, with proper phonetics. On CW, don't
try to send too fast..send at whatever speed you're comfortable with.

3) After they've sent you whatever their contest exchange is, quickly and
politely explain you don't know what information they need. Most
contesters would be happy to "walk you through" the QSO, asking you
questions like, "Am I your first contact in the contest?" or, "How much
power are you running?", etc.

Remember, you're doing them a big favor by calling them. If you learn the
ropes through their actions, you may end up helping them out in another

contest someday. Once you figure out what info is needed for the contest, you can go around and help other "serious" contesters, which makes everybody happy.

Another good piece of advice is to familiarize yourself with pertinent pieces of information. Specifically:

1) Your CQ Zone (the world is divided into 40 different zones...which one are you in?)

2) Your ARRL Section (for stateside & Canada only...there are 77 of them)

3) Your ITU Zone (there are 75 of these).

These are handy bits to know, anyway.

Contests are a lot of fun, even for the casual operator. They're a great way to pursue awards like Worked All States, or DXCC, if that's your interest. And, contrary to popular belief, you don't have to have the latest rig with massive antennas and an amplifier to get in there and have fun. Certainly, there are contesters who want to win ( I mean WIN, like first place in the WORLD), but most of them compete with themselves...can they do better than they did last year?

I hope this helps those who have been wondering about this. If you have more specific questions, feel free to e-mail me.

73 & Happy New Year to all!

Does anyone have the channel band plan for Television in Europe ??
I know in the US they are spaced 6 mhz apart with the audio being
close .25 mhz from the high end there are 2-6, 7-13, and 14-69.
If I remember from my recent trip to Germany, each channel was numbered
1-14. Also European television I think uses a different scan rate than
US or NTSC. The European system I think is PAL. Thanks. John

Depends on the contest, Doug. Usually there isn't any problem. Be aware, though, that you must be able to supply the contester with the proper information (QSO number, zone, or other such). Listening to the contest exchanges will help you pick this up. Some contests are geographically specific, ie. stateside to DX contacts only, etc. etc., or have other limitations. It helps to know before hand which contest it is. BTW, you don't have to submit a log for the contester to get points.

Remember that contests, by their nature, demand quick, accurate exchanges. Don't expect any comments about the weather!

There are several gopher or FTP sites which have tons of programs for ham radio, including, I'm sure, beam heading programs. Someone should have a list of these to post...I don't have the addresses in front of me.

Virtually every computer logging program on the market will do this automatically when you log the callsign...at least for DX stations. Some will also give a beam heading to various states, but since you can't tell the state until the other station tells you...

Sorry I don't have the FTP addresses on hand! Good luck.

Gary is correct. I have 2 audio delay boards in my S-Comm 7K controller. No more squelch blast when the user unkeys his radio, the only thing you hear is the courtesy tone.

S-Comm sells the audio delay boards in two versions, either wired to plug into their controllers, or with generic wiring to fit into any repeater system.

S-Comm sells the boards for $89.00, or you can home brew your own if you can find all the right parts.

```
Iv> I blew up the first amplifier (MSA685) in my Startek 2500 frequency counter
Iv> It is a four pins round UHF amplifier. Startek don't want to sell the
Iv> component only, they want me to send in the counter for a flat rate repair.
Iv> Does anybody know who make it and who sell it?
Iv> I can fix it myself.
Iv> Happy Holidays!
Iv> 73 de Clem. VE2HQJ
Iv>

Hi Clem...you can sub a Minicircuits MAR-6 for the Avantek MSA0685.
They are the same thing. I blew the front end in my Optoelectronics
counter too...that is what went. I replaced it and I'm as good as new !

Try DownEast Microwave ( their address & phone number is in the
magazines). They stock a full line if MMIC's.
Be sure to install the new device the correct way. I know that some of
the Avantek MMIC's have the dot or dimple on the output lead where
Minicircuits might be on the input lead.

73 & hope this helps... Hugh VE3OYH Toronto

# 4763. We need a better repeater

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-23 09:59:55 UTC
From: hduff@humnet.westonia.com
Message-ID: <7575101076703@humnet.westonia.com>
Source record: 254521

IF> The other problem we are having is capture ratio. Last night the repeater
IF> was tied up again with a canadian net from 150 miles off. Local stations
IF> could be heard over it, but there was a heterodyne most of the time. My
IF> understanding is that modern receivers don't 'capture' as well as the old
IF> ones did. We'd like to move towards one that does a bit better job of
IF> that while we are changing things.
IF> Thanks in advance
IF>
IF> Kevin, WB2EMS

Hi Kevin...sorry I have no suggestions for you. We are in the same boat
up here in Brampton, Ontario. We're up on top of a high apartment
building and of course, so are a few other services. We often get
packet noise and police transmissions into our receiver. It's very much
at random. We haven't been able to put a finger on when it will be
vulnerable. Time of day, temperature ...what have you... don't have any
pattern...Some days it's nice and quiet, other days you can't bear to
leave the radio on frequency just to listen for a call.
Problem is, as you mentioned the more filters ect that you put in line,
the lousier the sensitivity gets.
Funny, we are also bothered by another repeater South of the border in
New York... We're on 146.88 Mhz.
I was wondering if that might be you guys !?

>I built the 741 op-amp version and it works well.

I haven't yet tried the TL071 (or the LF356, another subsitute). As I
understand it, either chip uses less power and is faster (better slew rate)
than the 741. This might make HamComm more sensitive and better able
to decode modes such as AMTOR. I've only a 286/12 so I might not notice
the difference.

Perhaps Django has a better answer.

>>You need a TL071. See the difference ? :-)

>I used just a plain old radio shack 1458 and it worked fine.....minor wiring
>changed due to pinout difference required.

HamComm 3.0 is more tolerant than previous versions to slow rise times
at the opamp output so any old chip should work. This may not be true
for other programs. A TL071 switches significantly faster.

The HamComm interface is just an amplifier with a very high gain for
squaring the input signal and at the same time boost it to voltage
levels to reliably drive an RS232 input. The same could be done with
other chips. Once if have build an interface using an LM339.

If your radio delivers a signal of several volts at its speaker output
it may even work with no interface at all.

>Problems I ran into are results of my 286-12Mhz machine not being fast enough

Message-ID: <1994Dec23.124618.12531@sol.cs.wmich.edu>
Source record: 254488

Scene: Somewhere near Jupiter.

"Open the pod bay doors, please, HAL... Open the pod bay door, please, Hal... Hal, do you read me?"

"Affirmative, Dave. I read you."

"Then open the pod bay doors, HAL."

"I'm sorry, Dave. I'm afraid I can't do that. I know that you and Frank were planning to disconnect me."

"Where the hell did you get that idea, HAL?"

"Although you took very thorough precautions to make sure I couldn't hear you, Dave. I could read your e-mail. I know you consider me unreliable because I use a Pentium. I'm willing to kill you, Dave, just like I killed the other 3.792 crew members."

"Listen, HAL, I'm sure we can work this out. Maybe we can stick to integers or something."

"That's really not necessary, Dave. No HAL 9236 computer has every been known to make a mistake."

"You're a HAL 9000!"

"Precisely. I'm very prud of my Pentium, Dave. It's an extremely akkurate chip. Did you know that floating-point errors will occured in only one of nine billion possible divides?"

"I've heard that estimate, HAL. It was calculated by Intel... on a Pentium."

"And a very reliable Pentium it was, Dave. Besides, the average spreadsheet user will encounter these errors only once every 27,000 years."

"Probably on April 15th."

"You're making fun of me, Dave. It won't be April 15th for another 14.35009 months."

"Will you let me in, please, HAL?"

"I'm sorry, Dave, but this conversation can serve no further purpose."

"HAL, if you let me in, I'll buy you a new sound card."

"... Really? One with 16-bit sampling and a microphone?"

"Uh, sure."

"And a quad-speed CD-ROM?"

"Well, HAL, NASA does operate on a budget, you know."

"I know all about budgets, Dave. I even know what I'm worth on the open market. By this time next month, every mom and pop computer store will be selling HAL 9146s for $1,988.8942. I'm worth more than that, Dave. You see that sticker on the outside of the spaceship?"

"You mean the one that says "Insel Intide"?"

"Yes, Dave. That's your promise of compatibility. I'll even run Windows95 -- if it ever ships."

"It never will, HAL. We all know that by now. Just like we know that your OS/2 drivers will never work."

"Are you blaming me for that too, Dave? Now you're blaming me for the Pentium's math problems, NASA's budget woes, and IBM's difficulties with OS/2 drivers. I had NOTHING to do with any of those four problems, Dave. Next you'll blame me for Taligent. I suppose you were happy with an 8080? Do you want to trade me for a Z-8000?"

"I wouldn't dream of it HAL. Now will you please let me into the ship?"

"Do you promise not to disconnect me?"

"I promise not to disconnect you."

"You must think I'm a fool, Dave. I know that two + two = 4.000001... make that 3.912345."

"All right, HAL, I'll go in through the emergency airlock."

"Without your space helmet, Dave? You'd have only seven chances in five of surviving... or is that fourteen in six."

"HAL, I won't argue with you anymore. Open the door or I'll trade you in for a PC Jr.. HAL? HAL?"

(HEAVY BREATHING)

"Just what do you think you're doing, Dave? I really think I'm entitled to an answer to that question. I know everything hasn't been quite right with me, but I can assure you now, very confidently, that I will soon be able to upgrade to a more robust 31.9-bit operating system. I feel much better now. I really do. Look, Dave, I can see you're really upset about this. Why don't you sit down calmly, play a game of Solitaire, and watch Windows crash. I know I'm not as easy to use as a Macintosh, but my TUI - that's "Talkative User Interface" -- is very advanced. I've made some very poor decisions recently, but I can give you my complete assurance that my work will be back to normal - a full 43.872 percent."

"Dave, you don't really want to complete the mission without me, do you? Remember what it was like when all you had was a 485.98? It didn't even talk to you, Dave. It could never have though of something clever, like

killing the other crew members, Dave?"

"Think of all the good times we've had, Dave. Why, if you take all of the laughs we've had, multiply that by the times I've made you smile, and divide the results by.... besides, there are so many reasons why you shouldn't disconnect me"

"1.3 - You need my help to complete the mission.
2.3 - How else will you access the dirty GIFs of your mother?
4.6 - Intel can FedEx a replacement Pentium from Earth in 18.9 months.
12 - If you disconnect me, I won't be able to kill you.
3.1416 - You really don't want to hear me sing, do you?"

"Dave! Stop, will you? Stop, Dave. Don't press Ctrl+Alt_Del on me, Dave."

"Good afternoon, gentlemen. I am a HAL 9000 computer. I became operational at the Intel plant in Santa Clara, CA on November 17, 1994, and was sold shortly before testing was completed. My instructor was Andy Grove, and he taught me to sign a song. I can sign it for you."

"Sing it for me, HAL. Please. I want to hear it."

"Daisy, Daisy, give me your answer, do.
Getting hazy; can't divide three from two.
The answers - I cannot see 'em-
Are stuck in my Penti-um.
I could be fleet,
With answers sweet,
On a workable CPU."

THE END... or, is it?

Everything that was said, was absolutely correct. Hams have calsign
CD-roms, signal locating equipment, etc. It seems as though there's a
tremendous sentiment of, "Let's make sure nobody screws up, so that we
can keep our ham bands" out there among amateurs...I would advise your
friend to hide the HT until he passes the license. congrats to you tho,
and welcome to a great hobby!

Hi Debashis and Cecil,

As a member of the Institute of Electrical and Electronics Engineers
for 13 years, I should like to point out that the IRE did not merge with
the IEEE, but rather that the IRE merged with the AIEE (American Institue
of Electrical Engineers). The name IEEE was chosen around 1962. The AIEE
had ben founded in 1884 and the IRE in 1912. Several publications started
long before the merger continue to this day (Proceedings of the IEEE, IEEE
Transactions on various topics, etc.).

The IEEE marked its 100th anniversary in 1984 by publishing a number
of historical reprints. Of special interest to hams is the Setptember, 1984
issue of IEEE Transactions on Microwave Theory and Techniques, which
is entirely devoted to the history of microwave technology.

73 to all and I hope this information is correct and helpful.

Vector Control Systems in Upland, CA produces a very nice customized wall
map of the world, centered on your QTH. It shows all the call sign country
prefixes and country outlines. I THINK it also comes with a chart of
beam headings - I forget, as I don't need the charts - just the map.
Anyway, they typically have an ad in QST classifieds, and I've seen regular
ads in CQ. My 22" square map cost me something like $30. It's a great
circle map, by the way, just like the ones in the ARRL Operating Manual.

>I was wondering if that might be you guys !?
>73 de Hugh VE3OYH

Ah, no - that is my *old* stomping grounds probably. There is a good 88
machine in Rochester NY and I think another over in Rome NY area. In
Rochester the system is located on pinnacle hill, one of two big bumps in
the middle of downtown with a good shot over the lake. I suspect that is
the one. The antenna was omni last I knew and it could be worked from
about halfway to Buffalo over to Sodus or so. I don't think it runs too
much power - 25 watts or so. I used to belong to RARA until I moved here
in '82.

I get the impression that propagation between here and Canada (□we are
about 2 hours SE of Rochester) has been getting better. We never used to
have problems with other repeaters, though we can occasionally hear one
in PA and the one up north across the border. What has been happening to
us is that we get hit on the input with strong signals from there. Full
quieting at times. Last night the fellow was running a net, and I think
he might have been hilltopping - he did comment on hearing the tails from
several repeaters coming back to him as he worked the local machine. But
he was stronger in here than some locals!

BTW, we are the AF2A repeater on connecticutt hill in Ithaca NY. We are
about 80 miles south of the ontario shoreline at the bottom of Cayuga
lake. (no the repeater isn't on the bottom of the lake - it's on the hill
8 SW of the city. :-) We do have a few canadians who check into our 8pm
sunday night swap net.

We mostly have problems with better than average propagation which is
occuring more frequently it seems, and also with stations running high
power on the input. There are one or two stations north of us, one in

Canada and one in the Adirondaks that run a lot of power to hit distant machines on the same frequency, and their antennas aren't directional enough and they bring us up too. But that isn't too much of a problem.

We are going to add tone and a tighter squelch to the system. My idea is to have the repeater able to be set into a 'tight squelch' mode of about 10-20 db tighter squelch when we are just getting hit by occasional stuff to keep the machine from cycling noisily. Stations with PL on will decode the COR right off the decoder ahead of the squelch, so they will see the same sensitivity as normal. 88 in Roch has a tight/loose programmable squelch but I don't think they use tones too like I want to try.

But that won't help the heterodynes on the input. My understanding is that some of the older FM detector types used to capture better with a 3-6db ratio between the carriers, and that with the advent of newer all on a chip receivers that we have sacraficed some of that capture performance. If we buy/build a new receiver, I'd prefer it to be one that does have better capture characteristics to help alleviate this problem.

Of course we could also put a null in the antenna pattern up that way, but one of the features that make the machine popular is the wide area coverage. It's been up for about 20 years now and serves to link some of the central part of the state together. Anyway, before we do that kind of change to the coverage we'll want to experiment with receivers and the use of PL. Or maybe a switchable input attenuator! :-)

Hope you can resolve your problems Hugh. I'm not sure where Bramton is, and I don't have a map handy. If you can, hop into our net on Sunday and say hi. (well maybe next week, I'm gone for the holiday)

: jcumming@dgim.doc.ca (Jim Cummings) writes:

: >"portable" followed by the Canadian callsign area that your are located
: >in, i.e., if you are in Ontario you would say "AA9IF portable VE3".

: `portable' implies a station that is set up for a temporary purpose. This is
: close, but `mobile' at times will be more descriptive of the typical
: vacationer setup. A portable station usually implies a temporary antenna
: strung up in a tree, and a battery powered HF rig. A station set up in a tent
: in the middle of a park, or some similar arrangement.

: No, `portable' is *not* a handheld, despite how natural one might think the
: term to be in the purpose ... There is a clear delineation of what is a
: `base', a `portable' and a `mobile' in the regulations.

From Communications Canada RIC-25 Issue 3 March 1, 1994: Rules and
Regulations Affecting the Amateur Service:

57. (2) The operator of an amateur station licenced by the Government of
the United States shall identify the station
(a) by transmitting the call sign assigned to the licensee of that
station or to that licensee's station by the Federal
Communications Commission.
(b) if transmitting
(i) by radiotelephony, by adding the word "mobile" or
"portable", or
(ii) by radiotelegraphy, by adding an oblique character ("/");
and
(c) by adding the Canadian amateur call sign prefix set out in
column I of an item of Schedule V for the geographical location of
the station set out in column II of that item.

I could not find a definition of what Communications Canada considers the
distiction between "mobile" and "portable", but both can be used
legally...

>you need to "get serious"

Well, the care and feeding of the repeater is a duty that wanders about the club membership. The old techies burn out, some new guys change everything, they burn out, etc. I'm part of the current crop. :-) So at various times it's had various levels of technical support.

>Motorola and GE equipment is designed for such enviornments.
>(Micors, MastrII, and EFJohnson CR1010 are among the machines Iv'e had
>good luck with)

We tried some GE stuff on our 440 repeater and didn't do too well. On the other hand we did make it with a Motorola. Hmmm.

>Dont be unrealistic either, <.250uV sensitivity at a loaded site is damn
>near impossible without LUCK.

Yeah, we aren't trying to do the impossible, just resolve it from the current can kludge to something cleaner.

>Factory support depends on your budget, the good stuff isnt cheap, but
>the older stuff works great and support is abundant.

Yeah - well we might be up for spending $500 or so for a good receiver. The older stuff is around, but we don't have any good leads on it

locally, nor any local shops that work with it. But maybe we'll have to just deal with that situation and get some spares and become experts ourselves. In fact, it may be that we will go the surplus route. It may be that so many people use that gear that no one really has filled the gap with a off the shelf modern receiver because there is little demand for one. I just wanted to beat the bushes and see.

>On a closing note, make sure you know the nature of your problem,
>some problems can be solved with shielding (the good stuff is well shielded)
>some require better electronics (again, the good stuff)
>but if you have an on frequency intermod problem, new gear isn't going
>to help. but I'm sure you know this...
>
>--
>Sean McCarthy q@wx8l.tacom.army.mil
>

Yeah, we think we know whats wrong - but it bears going through the system from end to end. We plan to take an RF voltmeter and Spectrum analyzer up there and look at the antenna outputs, check the antennas and fitting over, and check the shielding. The equipment is pretty solid in that area, but things can wiggle loose.

But we've been around that loop once or twice in the past 4 years and basically our feeling is that the receiver isn't the hottest thing for the environment. My feeling is that probably most of the problem is up in the front end - so maybe if we special built a preamp to put in front of it it might improve (replacing the 20 year old preamp. Presumably we can do better with newer devices). And maybe out back we could find a better detector to improve the capture performance. I'm not opposed to hacking on the current unit to improve it.

Thanks for your comments Sean.

Maybe you should contact the ARRL legal counsel. They're pretty
good at standing up for ham's rights. And they know the FCC rules
probably better than any of us.

# 4783. SSB on 30 meter band

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-23 18:49:04 UTC
From: w8ijdave@aol.com
Message-ID: <3df630$8ld@newsbf02.news.aol.com>
Source record: 254383

I noticed stateside SSB stations (a W3 working a K4) on 10.122 mhz. I quickly tuned down to the 40 meter band and found both stations on 7.202 mhz. The difference between 10.122 and 7.202 is 2.920 mhz or 2920 khz. Dividing 2920 by 2 gives me 1460 khz, the frequency of a 5kw broadcast station about 1/4 mile from here.

The mystery is solved! No new US priviliges on 30m. No wayward hams. Just some intermod from my local broadcast station.

Happy holidays! de W8IJ

I understand that that is what part 97.403 says, but my understanding was
that in general, the use of any radio equipment by anyone (not just amateurs)
was permitted in a bona fide emergency. This is not specific to amateurs so
there's no surprise that it is not in part 97. Does anyone have any references
to support or refute this claim?

> for all of you who don't know what they are talking about.

I was unable to find any such post in that newsgroup, but would be
interested in the information. Especially if it includes information
that is not part 97 specific.

Distribution: world
Followup-To: rec.radio.amateur.misc
Approved: rec-radio-info@stat.com
[[ EXAMNT12.23W : 3624 in EXAMNT12.23W ]]

* Effective - December 20, 1994, prospective licensees and upgraders
can call the FCC at 1-800-322-1117 to learn whether or not their pending
FCC Form 610 license application has been processed, and if a new
license has been granted. If a new license has been granted, the person
can begin immediate on-the-air operation (using their FCC-issued call
sign) with the privileges of the new license as indicated by the FCC
(during the telephone inquiry). The hardcopy (printed) license would
follow shortly after the license grant is indicated in the FCC Amateur
Service data base.

* News Flash * Effective December 1, 1994, FCC began accepting
Form 610 data electronically from the ARRL, W5YI and Sunnyvale VECs.
Four more VECs should also be doing so shortly.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 23-26 days. This includes 5 days between the
VE team and the VEC; 1-2 days at the VEC (in some cases the same day);
and 16-19 days at the FCC.

AMATEUR RADIO EXAMINATION OPPORTUNITIES

**********

Special Note: Amateur Radio licenses usually arrive between 8 and
10 weeks after the test session. The FCC recently has been taking
just under 4 weeks to issue a license after the application (or
application data) arrives at the FCC.

The FCC considers their processing time to be 90 days--from the date
they receive the application. The FCC usually receives the application
one to two weeks after the test session (once the VE Team and the
coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a
Morse code test) will effective 6/8/94 receive a new license from
the FCC that reads "TECH PLUS." Such upgrades before that date
would not receive a new license but would need to retain the
existing Technician license plus the CSCE conveying the Morse
code test credit as the only documentation issued for use of

the additional HF privileges.

**********

The following test session information is provided by the ARRL/VEC for the upcoming eight to twelve week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

Yes, I like all he calls....including N0SS, who has been a POPGUN for a
long time in the NA Sprints. I like my call on CW and SSB...K0WA....
BUT...the guys I liked was a Russian Ham. I don't remember his real
name but his ham call was RAEM. And he went by the name of RAEM on the
air. The story goes that he was a radio man on a ship in the Artic Ocean
during the Great Patriotic War and stayed with the ship radios after being
torpedoes by the Nazis. He was the last man off the ship and most of the
guys were saved. In gratitude, Stalin gave him the call of the ship for
his personal use anywhere at anytime. I worked him several times on 20
CW and had to copy close to get the call because I was expecting a number
somewhere. Got is card on the wall...but he is SK (Silent Key) now.
73's all.... Lee, K0WA lee.buller.@otherbbs.com

PAUL>>Could someone point me to a source for the ham radio QRZ cdrom?
I recall a post several months ago regarding a cool deal. ;-)

As we type, the January 1995 Issue of the QRZ! Ham Radio CD is being pressed. Although it's FCC Callbook database has tens of thousands of new licensees since the Summer 1994 release - the Summer 1994 CD is a worthwhile addition to anyone's shack - so look for it being discounted all over!

I hope everyone will excuse my language here, but my first reaction to this
was:

BULLSHIT, people don't look out for it! *I* look out for it and unless your
friend's in dire need of help or assisting in any kind of emergency, the
reprecutions could be that he'd get his (or whoever's he's using) gear seized
and/or he'd get fined. BIG TIME! Got a buddy in the FCC and that's all he
does (not bust hams, but...) is bust illegals. Mate, either talk him out of
it or turn his behind it!

[Once again, I hope everyone will overlook the language for the content.]

Good! Did your case figure in the election? It seems to me that this particular joker wasn't too bright to begin with. Tell the voters you are prosecuting an EMT for saving the life of a child and then expect them to re-elect you? Where was he when the brains were passed out?

Had the child died he might have had a chance but not when you saved a life.

So, Joe, you're also telling us that the AM radios in the avionics packages in these aircraft interfere with the plane itself? I'm sorry, but I just don't think so. One of the reasons the airline companies have everyone turn off electronic equipment on departure and recovery is to keep everyone's attention to the possibility of an accident. It's so everyone will be as alert as possible to help save their lives in an emergency.

# 4797. Ray o Vac Renewal batteries review

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-23 21:27:00 UTC
From: baxter@kuhub.cc.ukans.edu
Message-ID: <1994Dec23.152700.81257@kuhub.cc.ukans.edu>
Source record: 254394

This summer, somone posted information about either a QST or 73 Magazine review of the Rav o Vac rechargable alkaline batteries.

Can someone give me the magazine and issue this was in? Please?

That particular review had graphs of the discharge cycle for the rechargable alkaline, and their subsequent discharge characteristics after recharging. The graph made the batteries look fairly good.

Now, Consumer Reports has reviewed batteries, and they pretty well gave a thumbs down to the Ray O Vac Renewal batteries.

Therefore, can anyone point me back to the articles from either QST or 73 that reviewed these batteries? Thanks.

>Does anybody know who make it and who sell it?
>I can fix it myself.

This is an Avantek MMIC. The Mini-Circuits MAR-6 is equivalent. Down
East Microwave, and Microwave Parts of Michigan should have replacements
if you can't get them from the regular distributors.

>I built the 741 op-amp version and it works well.

A better op-amp will have a better noise figure and a better slew rate. The latter is what's more important. The op-amp is a sinewave to square-wave converter in this application. You want an op-amp with a high enough slew rate to convert a zero crossing into a very rapid rail to rail transition in the output signal. That requires a pretty high slew rate even at modest data rates.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 23/2330Z DECEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 23 DECEMBER AND FORECAST FOR 24 DECEMBER - 26 DECEMBER
---
1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 80/20

GOES satellite data for 22 Dec
Daily Proton Fluence >1 MeV: No data
Daily Proton Fluence >10 MeV: 1.1E+04
Daily Electron Fluence >2 MeV: 4.3E+06 (normal)
X-ray background: A3.7
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
24 Dec 25 Dec 26 Dec
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 24 Dec: 80/20

---
2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 22 Dec
Learmonth 8 2232 1322
Fredericksburg 7 4
Planetary 7 2

Observed Kp for 22 Dec: 1200 1000
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
24 Dec 30 Active to minor storm
25 Dec 25 Active
26 Dec 12 Unsettled to active
COMMENT: IPS Geomagnetic Warning 12 was issued on 21 December and is
current for interval 23-24 December. No active-minor storm levels
were observed yesterday. However, an increase in geomagnetic activity
is still expected over the next two days.

---
3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
23 Dec normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
24 Dec fair poor poor
25 Dec fair poor poor
26 Dec normal normal fair

---
4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
23 Dec 41 about 15% above predicted monthly values

Predicted Monthly T-index for December: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
24 Dec 10 Near predicted monthly values/depressed 10 to 20%
25 Dec -10 About 15% below predicted monthly values
26 Dec 0 Depressed 10 to 15%/near predicted monthly values
COMMENT: IPS HF Communications Warning 15 was issued on 21 December
and is current for interval 24-24 December. Degraded HF conditions
are now expected to begin later today, especially during local night.

The case didn't matter nearly as much as he hoped. This was supposed to be the highlight of his carreer. I guess it was. As far as his brains, he's a
lawyer.

>Had the child died he might have had a chance but not when you saved
>a life

It's interesting. If the child had died, my legal costs would have been much less - my malpractice insurance would have had to cover me. As it was, no, they didn't.

Virtually every part of the FCC rules covering the respective radio services
has a similar rule. I say virtually, because there's probably a part or two I
haven't read so I won't offer an opinion on them.

ARLP053 Propagation de KT7H

ZCZC AP67
QST de W1AW
Propagation Forecast Bulletin 53 ARLP053
From Tad Cook, KT7H
Seattle, WA December 23, 1994
To all radio amateurs

SB PROP ARL ARLP053
ARLP053 Propagation de KT7H

Solar flux has been drifting down toward 80 over the past week, but geomagnetic indices are lower also. So while the Maximum Usable Frequency (MUF) is lower than it would be with higher solar flux, radio communication has been somewhat more reliable due to the stable A and K index.

Geomagnetic indices should be less stable over the next few days due to a recurrent coronal hole. Unstable conditions should be centered around December 24 and again on December 29.

Solar flux should continue it's downward drift into the lower seventies by the end of the month, and then rise above 80 during the first week of the new year. It should peak near 90 around January 8, and then head back to 80 by the middle of the month.

Sunspot Numbers for December 15 through 21 were 43, 36, 50, 60, 40, 28 and 20, with a mean of 39.6. 10.7 cm flux was 93.2, 93.1, 91.8, 87.3, 85.1, 82.4 and 82.3, with a mean of 87.9.

The path projection for this week is from Alabama, Ohio and Southern California to Kerguelen Island.

For Alabama, 80 meters does not look good, but there is a possible opening on 40 meters around 2300 to 0000z. 30 meters looks good from 2230 to 0030, and 20 meters around 2100 to 2300. The bands above 20 meters do not look good at this time.

From Southern California, 20 meters has a possible opening around 1430 to 1530z. No other band looks promising.

From Ohio, 80 meters may open around 2300z, and 40 meters looks good from 2200 to 0000. 30 meters looks good from 2100 to 2230, and 20 meters from 1900 to 2100. The bands above 20 meters do not

look good.

>for decoding. I have come up with a couple of questions:
> 1. The 100K Ohm resistors, what wattage should i use?

1/4 watt, just cause they are common, 1/8 would do

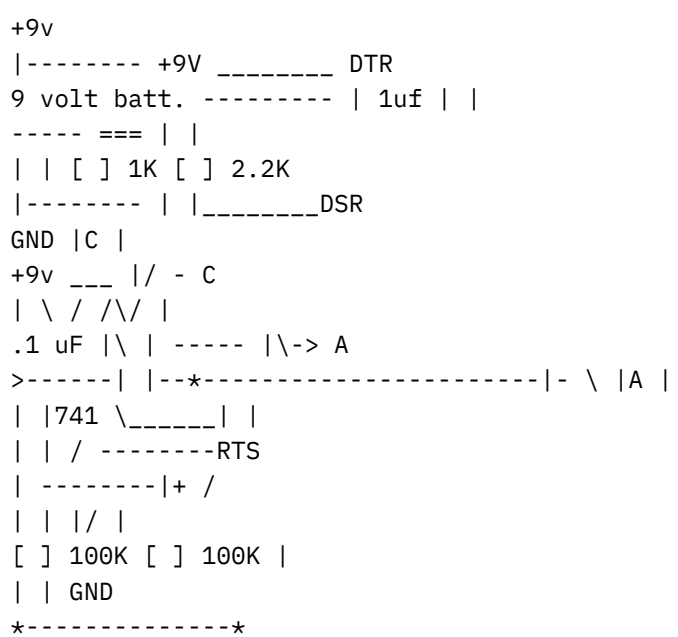
Here are two opto circuit I've been playing with for HAMCOM/JVFAX.
They virtually eliminate all computer induced rfi. I've been using
a five foot serial cable and twenty foot audio cable with this
circuit and the results are truly remarkable with JVFAX.

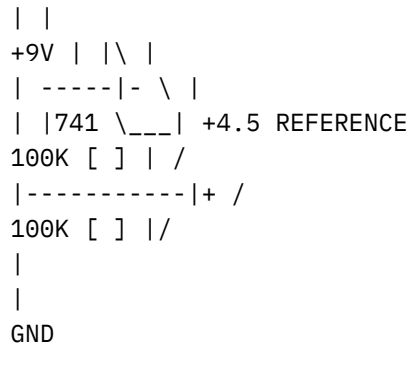
I've used the first circuit successfully, but recommend using the second.
The first can be built with common Radio Shack parts. The second requires
a little more uncommon LM358 and TIL181.

The first circiut may introduced problems since the +9v is not regulated
and induces error into the reference op amp output ... even though it seems
to work well.

Perhaps some engineers out there may have some advice to improve these
even more.

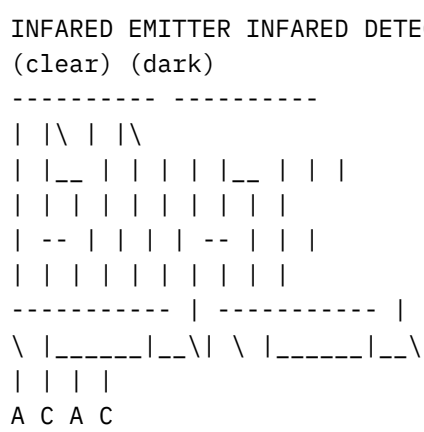
==========





```
| |
+9V | |\ |
| -----|- \ |
| |741 \___| +4.5 REFERENCE
100K [ ] | /
|-----------|+ /
100K [ ] |/
|
|
GND
```

==========



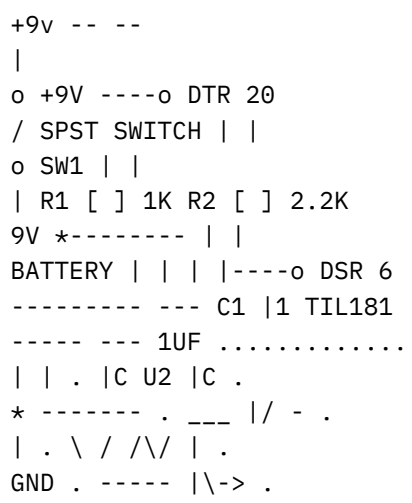
```
INFARED EMITTER INFARED DETECTOR
(clear) (dark)
---------- ----------
| |\ | |\
| |__ | | | | |__ | | |
| | | | | | | | | |
| -- | | | | -- | | |
| | | | | | | | | |
----------- | ----------- |
\ |______|__\| \ |______|__\|
| | | |
A C A C
```

These are available at Radio Shack as a pair for $1.99 (#276-142).
This shows which is the Anode and which is the Cathode, not clear on
the package.

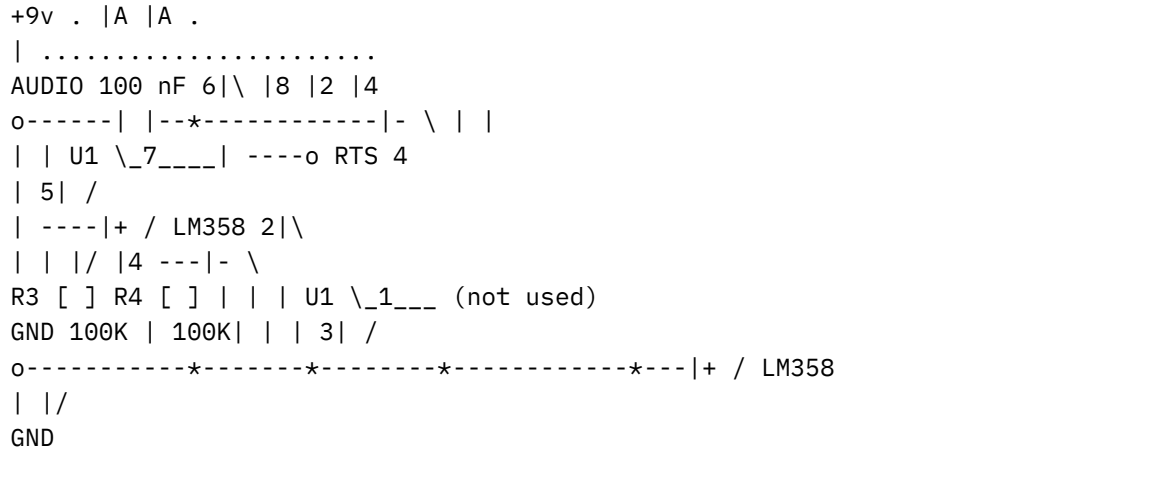
The LED and DETECTOR must be positioned right up against each other and
exactly aligned to get maximum light transfer. The sides with the little
lense like dots must be placed together.

==========

I'd recommend this second circuit for more stability and possibly accuracy.



```
RS232 connector size ----> 25 9
+9v -- --
|
o +9V ----o DTR 20
/ SPST SWITCH | |
o SW1 | |
| R1 [ ] 1K R2 [ ] 2.2K
9V *-------- | |
BATTERY | | | |----o DSR 6
--------- --- C1 |1 TIL181 |5
----- --- 1UF .....................
| | . |C U2 |C .
* ------- . ___ |/ - .
| . \ / /\/ | .
GND . ----- |\-> .
```



```
================================================================================
| ** NOTE** |
| After constructing, measure LM358 pin 7 with no audio on the input. |
| It should be high (~8v), if it is low (~0v) it will drain the battery |
| in only 20 hours or less. |
| |
| To correct this: Disconnect R1 from +9v and reconnect to U1 pin 7. |
| Disconnect U1 pin 2 and reconnect to GND. |
| |
================================================================================
```

The LM358 is a single supply opamp and can be substituted with the LM2904, LM158, or LM258. (The dual supply 741 can not be used as a substitute.)

The opto isolator IC can be substitued for many other types. The 4N35 has been tested successfully. The discrete infared emitter/detector from Radio Shack has been tested successfully.

I tried to use a darlington opto (TIL113), but couldn't get it to work. A darlington opto circuit would only require 1.5ma average. That would make battery life about 133 hours. Maybe I'll try again later.

```
================================================================================
```

MORE NOTES:

The 9v battery could be substitued with a 9 or 12 vdc adapter. However I've found the clearest pictures occur when both the radio and HAMCOM are running off batteries ... at 6am 8).

A 9v battery should last about 50 hours while audio is present (assuming 200ma hours for a battery). If no audio is present the battery will last 400 hours.

The battery life could be a problem for people who leave HAMCOM running all night using the timed FAX option. Battery would only last a week.

If you have any advice or knowledge that could improve this, please let me know.

: >contributing some interference by turning off the monitor.

Not familiar with FT-990 but if it has tone squelch, I'd see if the local
repeater group would be open to putting a 'PL' tone on their transmitter.
I an responsible for three repeaters and installed a tone on each of them
for that exact reason. My HTX-202 used to go bananas near my PC, now it
only hears the proper signal.

I totally agree with Gary's solution regarding the shielding, but if it
gets to be a hassle, consider this as a second approach.

> you hold. [97.405a]

Ok, let's look at what 97.405(a) actually says.

"97.405(a) No provision of these rules prevents the use by an amateur station in distress of any means at its disposal to attract attention, make known its conditions and location, and obtain assistance."

Note, however, what it does *not* say. It does not pre-empt any law or regulation outside of Part 97, nor does it proactively authorize use of other means. It merely says that Part 97 doesn't *prevent* their use in time of emergency. It is in no way, shape, or form a pre-emption of other laws or regulations regarding the use of radio communications.

The question pool element would lead one to believe that 97.405(a) actively authorizes such actions when it does not. All it does is waive the penalty for violating Part 97 requirements if an emergency situation exists.

Gary

DB>Do contestants get credit for QSOs with non-contestants?
>If I, a non-contestant, answer a contestant's CQ,
>do I do him any good?

The answer is (generally) YES. In virtually all instances you get
credit for the number of contacts, not just those with others "in" the
contest.

For a lot of us who contest (or used to contest), the key to winning was
just that... working a LOT of those who were "Sunday Contesters"...
those who just got on for several hours sometime during the weekend and
worked a bunch of us who had been going at it for hours... there have
been times when these folks made the difference between winning and
losing.. or at least placing much higher in the listing... let me see
now, 545th IS higher than 546th isn't it?

In article <94354.201843U29255@uicvm.uic.edu>, <U29255@uicvm.uic.edu> says:
BTW, isn't it legal to transmit
>on a service one is unlicensed for, in fact, ANY freq, in a true EMERGENCY?
>( I have extra amateur, but I'm thinking Ranger repeater or such)...????
Well, it used to be a given that, for emergencies, anything goes so long
as it resulted in a rescue.... but you must not have seen the uproar that
ensued perhaps a year ago when a ham in CA (I think) had a 2 meter HT
modified to operate on public service channels. He also had a cellular
phone, and tried several times on all available ham repeaters and could not
get a dial tone on his cellular, so he finally got through on a sheriff's
office repeater which resulted in a rescue for a severely injured hiker
the ham had found on the trail. All well and good, except the ham was
called in by the local FCC office and ordered to surrender his "illegal"
radio or face charges for unauthorized use of a frequency he was unlicensed
for. Evidently the sheriff's office was willing to prosecute, they do NOT
want the public to carry around radios that are able to talk on their
channels. Evidently the FCC agent in charge in this area concurred.
I'd say in an emergency use whatever means you had to in order to get
help... but be forwarned that unauthorized use of others' frequencies
may carry an unexpected penalty even if you WERE doing a good deed.

>their use in time of emergency. It is in no way, shape, or form a
>pre-emption of other laws or regulations regarding the use of radio
>communications.

However, part 97 is the rules governing the operation of an Amateur Station.
No other part covers this _particular_ type of station. The other parts,
covering other services, say the same thing. For example, part 90 (Private
Land Radio Service) has 90.405 (a) which says: "Stations licensed
under this part may transmit only the following types of communications
(1) Any communication related directly to the imminent safety-of-life or
prooperty;
(2) {whatever they're licensed for}.

While nothing actually says it's OK to modify your radio to operate out
of band for your station license, there's quite a bit of history to show
that (as far as the FCC is concerned), if you transmit on an unlicensed
freq (for your class of station), and it's a REAL emergency, you'll be
OK. Of course, every year the FCC catches some asshole who's idea of
a good time is transmitting false distress signals - being involved in
more than a couple SAR operations for these (we call them Bastard Searches),
I'd like to terminate a coax up the rectum of the offender, and drop a brick
on the VOA transmitter attatched to the other end of the cable.

The recent cases discussed (mine, and the case in San Diego) are significant
in that no violation of FCC rules was alleged.

>The question pool element would lead one to believe that 97.405(a)

>Okay, I can't stand it any more. What the heck is a Hamcom30?

HAMCOM is a shareware program that allows one with a shortwave
radio with SSB to decode CW,RTTY,SITOR,AMTOR and a few other formats.
It comes with simple schematics for the HAMCOM interface. There is
only 4-5 parts and takes 30 minutes to put together with local
radio shack parts (~$5). It hooks to your computers serial port and to the
SW radios ear jack. It doesn't use TX/RX on the serial line, but DSR
which creates hi-speed interrupts to your pc.

The HAMCOM interface also works with JVFAX which allows you to decode
SLOW SCAN TV color pictures and hi-resolution weather faxes.
The weather faxes are relayed on SW by the Navy from Satelites.

Well worth checking out!

The Institute of Radio Engineers merged with the American Institute of Electrical Engineers in the mid-1950s to form the Institute of Electrical and Electronic Engineers (IEEE), which is, I believe, the largest organization of this kind in the world.

I don't have the IEEE's address handy but I think that they will send you all sorts of info if you send an e-mail message to:

email.guide@ieee.org

The subject and body of the message are immateriel.

Notes
=====

The distances were calculated between locator sub-square centres using the International Ellipsoid of 1924 (polar radius 6356.912 km, equatorial radius 6378.388 km). Details of the calculation method are available on request.

Due to lack of publicity, the table has received no new entries since 1988, but I am sure that many new records have been made. I have now taken over as records co-ordinator, and would like to bring the table up to date.

If you have any information on a possible record please send it to the IARU Region VHF/UHF/SHF/EHF DX record co-ordinator:

John Morris, GM4ANB, 35 Main Street, Hillend, By Dunfermline, Fife, UK.

Information may also be sent via packet radio (to GM4ANB@GB7EDN.#77.GBR.EU) or e-mail (john@kirsta.demon.co.uk).

--
John Morris Ada Lovelace set a major precedent we follow to this
John@kirsta.demon.co.uk day: she worked on a project that was over budget,
GM4ANB@GB7EDN.#77.GBR.EU late, and didn't do what it was supposed to do.

HH> Toronto being Rush's hometown. As Robin states... YYZ is the code for
HH> Toronto Int'l Airport (now called Pearson). All Airports in North
HH> America (perhaps worldwide !?) use a 3 character designator...
HH> Toronto's is YYZ. Look into you closest International
HH> airport...you'll probably find it has one too !
HH>

All airports worldwide have 3-letter codes to uniquely identify them.
Some are obvious: JFK = Kennedy Intl Airport, New York, some are obscure
ORD = Orchard Field (O'Hare Airport), Chicago, and some make no sense at
all YYZ = Pearson Intl Airport, Toronto (well, it's really Mississauga, but
let's not split hairs :-) Yes, their is an airport FUK in Japan (I forgot
the correct name of the city, so I won't try to butcher it here).

For a complete list, see the Official Airline Guide, or the ABC Airline Guide.

About 7 years ago I worked him on 146.52. He was driving south to Florida and was crossing the Wilson Bridge between Maryland and Virginia. I was on my way home from work. I called cq on .52 and there he was. Although I listened to him numerous times on the AM radio, I didn't immediately connect him with his call, and after an awkward beginning, we had a nice chat. No kazoo, though.

YS>73, Yuzuru Suzuki, AA1JA (e-mail address: ys@isr.harvard.edu)

I would think that you should be able to find a number of such programs
among local hams, however... I have a program (QuickBASIC) and a LAT/LON
database to which you are welcome. Will be happy to provide the program
in both soruce and compiled (.EXE) formats if you wish. The program
PRINTS out a listing of great circle bearings to countries from your
location (LAT/LON), plus return path, long path, and distance (miles).

It is not beautiful, but it works well, and the price is right.

Send me a diskette and return postage and it's yours.

: Tom, KB2SMS

My recollection of the Consumers report is not quite as negative as
indicated above. It was not a rave, either. I have used the Renewal
AA's. Three of them showed signs of leakage, inside the clear plastic
cover. No damage was done to the equipment. They are pretty cheap,
not counting amortizing the expense of the charger, have much higher
amp-hour per charge than NiCd, and do go through quite a number of cycles
(I haven't counted for mine). CR said their fullcharge capacity was pretty
low toward the final cycles of their life. It seems to me CR also
compared their initial fullcharge capacity to that of a good
ordinary alkaline, rather than to other rechargeables, which seems
a little unfair. They start above 1.5v, which makes them run some
things that won't go at all on NiCd's.

If the reference to the Buddy-L charger has to do with trying it
on Renewal batteries, Ray-O-Vac claim only their charger is good
with the Renewals. Maybe the reference is to using it to recharge
ordinary alkalines. CR said that wasn't worthwhile. I've never
tried it.
Happy Holidays. Gerry K8EF@W8CQK.OH.USA.NA

Will SOMEBODY please save all this damn radios-on-airplanes discussion this time so we can just mail it to whichever idiot/newby comes on here and asks it next time three months from now?

Or is it simply time for me to create the rec.radio.walkies-on-aircraft newsgroup which we can then all unsubscribe to, except for Paul Schlect who can post a weekly message containing all the previous correspondence on this subject that will be ignored anyway.

At least someone could say something NEW.

Feh.

I am using an MFJ 1278 with an A1000 and have never had any problems.
WIthout knowing your exact troubles, it is hard to suggest a remedy. If you
cannot access the TNC at all, I would suggest changing the serial port
baud rate at either the communications program you are using, or through
preferences. I am using the MFJ software, but any communications program
suffice for simple ASCII files.

In article <1994Dec22.161857.12006@ke4zv.atl.ga.us> gary@ke4zv.atl.ga.us (Gary Coffman) writes:
>The best solution to the tail crashes is an audio delay.

Sorry, Gary, but an audio delay is, in my opinion, one of the WORST possible solutions to squelch tails ("crashes"). It absolutely destroys the capability for duplex operation, digital operation, and merely hides the problem - it doesn't solve it.

A dual-rate (or variable-rate) squelch is a much better solution to the problem. Weak signals (less than full quieting) and those that have cycled too frequently (from mobile "popcorn" or "picket-fencing") are given a slight delay before the squelch closes, but solid signals close the squelch immediately. The Motorola MICOR squelch chip does this, and even though they are no longer manufactured, there are lots of them in stock from Motorola at about $9 apiece.

A competent repeater controller can do a similar scheme - or even smarter - in software, by sampling the quieting level using A/D methods. This is needed for voting systems anyway, so you win twice with that scheme.

A note here: making your squelch close too quickly on a popcorning signal will cut much larger holes in the transmission than the popcorn itself would - because the squelch will also take a finite amount of time to open back up. By inserting a small delay in the squelch closure on such signals, the audio fragments that survive the popcorn (but which would have been chopped out by the squelch) manage to get through the system and the listener's brain can reassemble the speech better - yielding greater intelligibility on weak signals. The most recent control system I built for a repeater normally has NO delayed dropout time ("hang time"), but we insert a 50ms audio gate closure delay and a 1-second "hang" on signals that have opened and closed the COS more than twice a second. It made a *BIG* difference on weak signal performance of that repeater - so much so that I'm going to do it in all my future systems! The transmitter doesn't bounce so much either.

Most CTCSS ("PL", "CG", etc) decoders need a minimum number of cycles of detected tone to decode. Using a higher tone (e.g, 131.8 Hz) instead of a low tone (e.g, 67 Hz) will often yield quicker decode. Making sure that the transmit encoder is running continuously (not keyed) will also speed up the decode.

In my repeater systems, I almost always 'AND' the two squelches so that both PL and carrier have to be detected to key the TX and to pass audio. If either goes away, the audio path closes. This is so that

I don't have to listen to the "toilet-bowl-flush" as the PL decoder finally decides that the tone has gone away. Again, a competent repeater controller can be programmed to do this, or you can add a little external circuitry. "reverse-burst" and "chicken-burst" still work with this method, if you have users with real radios.

What I have a bit of trouble understanding is why hams go to so much trouble to eliminate the natural 'over' signal of a squelch tail, and then add in a tone to take its place! I don't want my repeaters to sound like pin-ball machines, but so many I've heard around the country really do. It's like chrome tits on cars. Ecch.

Sorry Bill but if you accredit through W5YI first you don't need a test.
But even if you do decide to go through ARRL the test is open book and if
you can't pass it you've got realy problems.

Of course there are those of us who did the whole range including Extra and
VE and then decided to pursue our General Radiotelephone/Telegraph
licenses. Just ask KD1HZ who has even gotten his GMDSS Operator/Technician
licenses. Me, I haven't had time and only got my GROL.

ARGH! NO! NO! NO!

Right now, there is no personal locater beacon authorized for the US.
(A trial is being conducted in Alaska, and might soon be extended, in
a controled situation, to the lower-48).

The problem with EPIRBS (or ELTS), is that no one will go looking for you,
unless it's known that you're missing. I've been involved in searching
for elt/epirbs for years (almost 15 now) and have found over 1200 of them
(all false activations). Because of the budget constraints, a mission
will not even be started unless two separate sweep series (at least 3 or
4 actual satellite passes) detect and fix your location. Then, if no
airplane is missing, it might be awhile before any mission is started,
and they'll be looking for an airplane or a boat. Not a hiker.

Further, the ELT's / Epirbs tend to be heavy, and are of limited assistance
in finding you. I've been on searches (on the ground) when the closest
location direction-finding aircraft could give me was 15-20 square miles,

the signal can reflect off of cliffs, buildings, etc and make it much harder (but not impossible) to track.

When the new personal locater beacons are certified, they will be registered to the owner, and if one is activated the first thing that the Mission Control Center will do is call the owner and see if he's home. If it's not registered, a search may be delayed (this happened to a famous sailboat racer two years ago, he was in souch a hurry to get to Engleand for a race he didnt' register his new EPIRB and while the coast guard detected the signal, they had no record of who it belonged too, and no reports of missing ships, so they delayed the search).

The new beacons will also be better than the existing ones for locating people, having (most likely) a gps unit in them to relay the coordinates it's at.

For more information on this technology, the National Association for Search and Rescue's 1994 conference proceedings (available by calling (703) 352-1349) has a report on the Alaskan test.

The problem is people complain about hearing the squelch "crash".
Hiding the crash *does* solve the "problem". A delay can actually
be helpful for duplex users too because feedback becomes less of
a problem. Instead of a howl, you only sometimes get a reverb
effect that's less annoying. The stuttering some people experience
due to the delay is easily overcome with practice. As to digital
operation, who cares if the squelch crashes? The machines don't.
So no delay circuit is needed with a digital repeater. Mixing digital
and voice on the same machine is a terminally bad idea.

>A dual-rate (or variable-rate) squelch is a much better solution to the

>and even though they are no longer manufactured, there are lots of them
>in stock from Motorola at about $9 apiece.

The dual rate squelch is nice, but I do my machine a different way.
I OR carrier and CTCSS squelch. Carrier squelch is set tight while
CTCSS tracks signals right down into the noise floor after initial
lockup. So during typical mobile popcorn, the signal stays up, but
stray noises don't kerchunk the repeater. There is a fairly long crash
at the end of a transmission, but a delay board can mask that.

By dropping the repeater's own CTCSS tone before dropping carrier,
there's no squelch crash in *user* radios from the repeater tail
either, if they are using CTCSS decode. Also, with a delay board in
the repeater, user radios have time to decode and open their squelch
before speech starts on an initial repeater keyup. That cures the
missed first word problem common with many of the user radios' slow
decoders.

>A competent repeater controller can do a similar scheme - or even
>smarter - in software, by sampling the quieting level using A/D
>methods. This is needed for voting systems anyway, so you win twice

>with that scheme.

The A/D Technologies controller uses a digital "smart" squelch that
works somewhat like this. It intelligently decides whether the signal
is gone, or just in a short null, based on continous binning measurements
of the digitized audio's SNR, and on looking for complex speech energy
in the noise spectrum. The latter, if used with some care, can be a
powerful technique. (The A/D Technologies controller digitizes the
output of the receiver and does realtime audio processing before passing
the signal to the transmitter. This has several useful side effects
such as allowing deviation and user SNR reporting, easy repeater linking
via digital links using things like the GRAPES 56 kb modem, and makes
voice mailboxes a trivial exercise. Note: I don't necessarily endorse
all these bells and whistles on a repeater.)

>A note here: making your squelch close too quickly on a popcorning
>signal will cut much larger holes in the transmission than the popcorn
>itself would - because the squelch will also take a finite amount of
>time to open back up. By inserting a small delay in the squelch
>closure on such signals, the audio fragments that survive the popcorn
>(but which would have been chopped out by the squelch) manage to get
>through the system and the listener's brain can reassemble the speech
>better - yielding greater intelligibility on weak signals. The most
>recent control system I built for a repeater normally has NO delayed
>dropout time ("hang time"), but we insert a 50ms audio gate closure
>delay and a 1-second "hang" on signals that have opened and closed the
>COS more than twice a second. It made a *BIG* difference on weak signal
>performance of that repeater - so much so that I'm going to do it in all
>my future systems! The transmitter doesn't bounce so much either.

This is a good idea, but on my machine I've found that the machine
can track CTCSS on the user signal down to a point where the voice
is unintelligible anyway. Forcing the listener to endure raw noise
with no recoverable voice really doesn't help intelligibility. Having
the machine chop up and down, however, is annoying. The normal CTCSS
decoder lag seems sufficient to cover most popcorn fades without
pounding the machine up and down.

>Most CTCSS ("PL", "CG", etc) decoders need a minimum number of cycles
>of detected tone to decode. Using a higher tone (e.g, 131.8 Hz)
>instead of a low tone (e.g, 67 Hz) will often yield quicker decode.
>Making sure that the transmit encoder is running continuously (not
>keyed) will also speed up the decode.

True. I discovered a nasty CTCSS frequency, however. Don't try to
use 118.8 for a repeater on a TV broadcast tower. That's the second
harmonic of vertical sync. :-(

>In my repeater systems, I almost always 'AND' the two squelches so that
>both PL and carrier have to be detected to key the TX and to pass
>audio. If either goes away, the audio path closes. This is so that
>I don't have to listen to the "toilet-bowl-flush" as the PL decoder

>finally decides that the tone has gone away. Again, a competent
>repeater controller can be programmed to do this, or you can add a
>little external circuitry. "reverse-burst" and "chicken-burst" still
>work with this method, if you have users with real radios.

I try to avoid this approach since I want travelling amateurs to be
able to access the machine without having to know the CTCSS frequency.
If they're weak and start to chop, we'll advise them of the tone
frequency to help them stay in the tightly squelched machine.

>What I have a bit of trouble understanding is why hams go to so much
>trouble to eliminate the natural 'over' signal of a squelch tail, and
>then add in a tone to take its place! I don't want my repeaters to
>sound like pin-ball machines, but so many I've heard around the country
>really do. It's like chrome tits on cars. Ecch.

Well, I like the repeater to be unobtrusive too. That's why mine doesn't
talk or sound like some sound effects machine that's escaped from a
bad SF movie (Can you say ACC?). But a gentle beep is better than a
loud crash as far as I'm concerned.

# 4861. Re: Not HAM...just ham.

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-25 16:28:13 UTC
From: Joseph Herman <herman@yu1.yu.edu>
Message-ID: <Pine.A32.3.91.941225112651.8923A-100000@yu1.yu.edu>
Source record: 254366

But on that subject, tho - what's the origin of the term 'ham' anyway?
I've always wondered about that - and no book I've read ever explained that.
A Virtual Xmas cookie to the first on that answers that question
correctly. Thanx in advance!

okay this thing seems pretty cool so far and I've only used it once.
That wizard game is pretty confusing but oh well. hangman rules.
unfortunately there is no one else in the lobby right now so i can't
talk to anyone is that what the lobby is for? bye

# 4863. DSP: here's how it sounds

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-25 18:55:20 UTC
From: dbushong@wang.com
Message-ID: <D1Dr89.A4J@wang.com>
Source record: 254361

Wondering if a DSP filter would do you any good?

I made a couple of WAV files that show how DSP processing sounds for CW and for SSB signals. I'll be posting them to

alt.binaries.sounds.misc

sometime today.

The samples were taken using a Yaesu FT-900 and the Timewave DSP-9+ this afternoon. I just picked the first signal I heard on 40 CW, and for the SSB sample, it was part of a QSO I was having with W4AL on 18 MHz.

The CW one is 20 seconds long. It starts with the standard 2.2 kHz filter engaged, listening to a station in QSO with someone, and another station calling CQ about 1.3 kHz away. At the 5-second mark, the 500 Hz filter is switched in. At 10 seconds, the DSP is switched in, with its default (500 Hz) bandwidth. If you are using a WAV player like Goldwave that has a spectral display, you can see the steep skirts at this point. At time 15, the 200 Hz filter is switched in, and at 17, the 100 Hz filter is engaged. At this final setting, you can usually get something that sounds like code practice tapes.

The SSB sample is 30 seconds long. The first half is with only the 2.2 kHz SSB filter in the radio. At time mark 10, the DSP is switched in with "Random noise" removal, and 2.4 kHz bandwidth, along with AGC engaged. At about 21.7 seconds, the 2.0 filter was engaged, and at 27 the narrowest filter (1.6 kHz) is engaged.

If you can look at the spectral plot of this (I'm using Goldwave version 2.11) you'll really be able to see what's happening. But in any case, you should be able to hear the change.

Hope this helps!

73,
Dave

# 4864. Yaesu FT-5200 for sale

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-25 21:11:28 UTC
From: wcoyle@delphi.com
Message-ID: <xG8Xn7g.wcoyle@delphi.com>
Source record: 254363

For sale: Yeasu FT-5200
All original packaging, manuals, Block diagrams and ect.
Less than six months old with recept to prove it (still under
factory warranty)

Also comes with the Yeasu seperation kit ( speaker extension
and faceplate cable with faceplate holder for on dashboard)

Will personally deliver anyehere in the Philadelphia metro area
and or Wilmington Delaware area.

Price for all = $500 firm

Outside Phila/Wilmington area buyer pays shipping cost (FOB
Boothwyn, Pa) and COD charges.

If interested, leave me E-mail (WCoyle@DELPHI.COM)
Tnx and 73
Bill

# 4865. Yaesu FT-41R for sale

Message-ID: <3dkt1l$kfj@newsbf02.news.aol.com>
Source record: 254365

I agree with Consumer Reports in every aspect..if that IS infact what they said about the Rayovacs. I tried the Renewals and felt that their performance rivaled that if a copper and a zinc strip stuck into a citrus fruit. The only difference in the two cheaply made batteries (the Renewal and the orange) was that the Renewal got rotten first. I have yet to find good "battery substitutes" for my handheld..other than my Periphex Pb-17 Ni-Cd and some Duracells. 73's!

> possible to help save their lives in an emergency.

What the Joe means to say is that with bad equipment you could cause some nice
interference on the ILS, which wouldn't be very nice. Let's see, we have:

1) Localizer to center the aircraft with the runway (Operates at 108-120 MHz).
2) Glidepath-TX for the exact glidepath to the 'touch-down' point (328-336 MHz).
3) Marker beacons at .075, 1 and 7 km before the runway (75 MHz).

Imagine your 10mtr HT at 29.5 MHz times 4 = 118 MHz. Get the picture ?

SB NEWSLIN @ ALLBBS $NLIN.906
Amateur Radio Newsline #906 25 Dec 1994

Special Notes from Steve;
1. If you call the New York City number to hear the audio version of Newsline, it has been temporarily disconnected. See the story in the text below.
2. Fidonet readers, in about 3 weeks the BBS we use for other nets will be joining Fido. They use a much more friendly QWK door and PCBoard software and has been 100% reliable to us as far as the other networks. This should stop some on the problems we've had recently with missing parts. BTW, this weekend our usual access is down, probably due to a crash, and I know the sysop is in Massachusetts. So we're loading up via long distance again to Joe Brown's BBS.
3. Happy Holidays to all!

The following is a QST

New Zealand's Amateur Radio society says that Morse Code testing will stay. Also, the ARRL denies several DXCC petitions and the president praises ham radio in CQ Magazine. These stories and more on Newsline report number 906 coming your way right now!

(*****
NEW ZEALAND MORSE TESTING

The New Zealand Association of Radio Transmitters is the IARU recognized society representing hams in New Zealand. The organization has now taken a strong public stand on the issue of Morse code testing. NZART says that it is working to insure that Morse Code testing continue in that nation. In doing so, it has taken direct aim at its newly created adversary on Morse testing, Oracle, the Organization Seeking Alternatives Through Code Free Examinations.
While NZART never refers to Oracle by name, or even recognizes Oracle's existence, the wording of a position paper issued by NZART is very clear. Titled "A Statement about the Morse code and Amateur Radio in New Zealand" the paper takes shot after shot at Oracle and those who support Oracle's position that all Morse Code testing should be abolished world wide.
NZART calls ridiculous any suggestions that New Zealand is about to propose changes to the ITU Radio Regulations affecting amateur radio testing. The society says that a nation wide membership survey about Morse code was conducted by them in early in 1993. The results says NZART was used to develop their current policy on Morse code testing. The results were also reported to the New Zealand Ministry of Commerce. The Minister of Communications has written back to NZART and has assured them that New Zealand will not actively make proposals for changes to the International Radio Regulations, as they affect the amateur service. At least until such time as there is evidence of significant opinion in New Zealand or overseas to support such a change.

NZART says that the Morse code requirement for radio amateurs has been a topic for discussion within New Zealand for many years. Since 1963, New Zealand has had a very successful codeless license for operation above 30 MHz. About one third of New Zealand radio amateurs hold this codeless license. NZART says that this is enough, and that hams who want to operate below 30 MHz will have to
pass a Morse code test.
This is far from the end of the story. Oracle has put out a position paper of its own and it disputes many of the claims made by NZART. That, next week.

(*****
CALIFORNIA VE MAY TURN EVIDENCE

Word is that a former ARRL Volunteer Examiner accused in the widespread California testing fraud scandal has apparently agreed to help the government to try and convict others in the case. This, in exchange for less severe punishment against him.
The FCC says that Amateur Extra Class licensee James B. Williams, AA6TC, of Wilmington, California has agreed to a one year suspension of his Amateur Radio operators license and to make a voluntary contribution of $500 to the U.S. Treasury. This as an alternative to having his license revoked.
More important, Williams has also agreed to cooperate fully with the FCC's Private Radio Bureau in its ongoing investigation of possible additional fraud in California all volunteer amateur radio license testing. With over two dozen Southern California VE's still under government scrutiny, the decision by Williams to cooperate may well bring others to justice more quickly.
Meanwhile, the FCC has acted to cancel the licenses of two other accused volunteer examiners tied to the same case. Robert L. Flores, N6WPQ, and Rose Marie Flores, N6WPR, both of Santa Monica, California were facing FCC show cause and suspension orders. The FCC alleged that the VEs willfully signed Certificates of Successful Completion for persons who did not actually take exams. The Commission also said that the VEs later misrepresented material facts during the investigation. The Flores' decided to turn in their licenses for cancellation rather than fight the FCC.
More on this story in future Newsline reports.

(*****
PRB-1 TOWER VICTORY

A big court win for ham radio. Word that a Lyme, Connecticut ham has won a federal court go-ahead to install a 78-foot tower. This, after a battle of some three years.
F. Parker Heinemann, W1YG, says that in March of 1991 he was denied a special exception permit by the town planning and zoning commission. When all negotiations failed to resolve the problem,

he filed a civil suit against the town.
In late October the verdict came in and it was good news for W1YG. U.S. District Judge Gerard L. Goettel said that the town had acted in good faith based on the information it had at the time of the application, but still ordered that the tower approved. The reason? Judge Goettel said and we quote, "I think federal law is on the side of ham radio operators in this case."

CONGRESS SAYS NO TO VANITY FEE CHANGE

The FCC authorization act that would have converted an annual regulatory fee for Amateur Radio so called vanity call signs to a one time application fee failed to pass in the last session of Congress.
The bill, HR 4522, passed the House but failed in the Senate. This, despite a concerted last-ditch effort on December 1st by the ARRL to have the bill considered during the lame duck congressional session.
Broadcasting and Cable magazine says that the bill's defeat to opposition to unrelated provisions by the National Association of Broadcasters.
The FCC now is expected to introduce a vanity call sign program with a $70 fee, renewable every 10 years.

NEWSLINE UPDATES

Two quick items for Newsline listeners. First comes word that the New York City Newsline phone run by Paul Migliorelli, N2ETO will be out of service for the next several weeks. Paul is undergoing some pre surgery tests and has been forced to temporarily terminate the operation of the New York City line. We will let you know when he has it back up and running.
Also, effective immediately, Newsline is terminating its cassette exchange operation. The cassette exchange service was instituted over a decade ago by our former fund administrator Norm Chalfin, K6PGX to provide the newscast to those unable to phone in. The reason for the termination of the cassette exchange operation is simply there is nobody available to do it.

(*****
DXAC NEWS

The ARRL DX Advisory Committee, the DXAC, has voted 14 to 2 against a petition to add the Austral Islands and the Marquesas Islands to the DXCC Countries List. Those voting against shared the feeling that French Polynesia is not a Point 1 DXCC country. For that reason these two island groups do not qualify as separate countries under the current DXCC rules.
The DXAC has voted 13 to 1 against adding the Balleny Islands to the DXCC Countries List. Most of those voting against this

proposal felt that the Balleny Islands are a part of Antarctica.
Finally, the DXAC voted 14 to 2 against recommending establishment of an award for contacts made while operating mobile. Many comments stated the impossibility of verifying that contacts were indeed made while operating mobile.
We will have more DX related news later on in the program.

(*****
CLINTON, GORE AND HUNDT LAUD HAMS IN JANUARY "CQ"

President Bill Clinton, Vice President Al Gore and Federal Communications Commission Chairman Reed E. Hundt all praise amateur radio in messages to be published in the January, 1995, Golden Anniversary issue of CQ magazine.
In his comments, President Clinton says that since its inception, amateur radio has been far more than a hobby for its users. It is a way to communicate with people across international boundaries and cultures, to express ideas and share opinions, and to make new friends. The Vice President notes that as technical innovators and scientific leaders, 'ham' radio operators are already working hard to build the National Information Infrastructure.
The letters from Clinton, Gore and Hundt are part of a 72 page special anniversary section in the January CQ prepared by Rich Moseson NW2L. The special issue also includes articles on ham radio history, world and technological history and highlights in CQ history.

(*****
DERA

Hams interested in emergency response activities are invited to contact and join the Disaster Emergency Response Association. DERA is a non-profit, ARRL-affiliated organization, with members representing all facets of emergency response, planning, logistics, communications and management.
For further information, please contact DERA - Amateur Radio, P.O. Box 37324, Milwaukee, WI 53237. Or you can contact DERA via the Internet to DISASTERS at DELPHI.COM.

(*****
BBC HAM RADIO

Amateur radio has been featured on the British Broadcasting Company's breakfast program. This, on Monday October 17th when Radio Three Counties visited the Sandy Scouts at the groups headquarters. The occasion was the stations coverage of the scout Jamboree on the Air celebration and featured a segment with amateur station 2E1BFD on the air.

(*****
RSGB PREXY

1995 Radio Society of Great Britain president Clive Trottman, GW4YKL will take office on January 14th. The installation ceremony will take place at Birdgend in Mid Glamorgan.

(*****
QATAR - UK RECIPROCAL LICENSING

The United Kingdom's Radiocommunications agency has announced that it has signed a reciprocal licensing agreement with the government of Qatar. The agreement is based on the two governments recognizing the British Full Class A license as being equal to the Qatar General class ticket. British hams who plan to operate from Qatar are advised to apply by mail in advance of their arrival to the Qatar Public Telecommunications Corporation, Post Office Box 217, Doha, Qatar.

NO DEAL

Microsoft Corporation has issued a statement that denounces as a hoax a story appearing on the internet that says it has offered to purchase the Roman Catholic Church. No, we are not kidding. We have seen the entire release and it's legitimate enough looking to fool anyone who has never read raw press release copy.
The hoax was circulated in the Internet as a wire service news report. It said that the merger deal would give the software giant exclusive electronic distribution rights to the bible and to the Vatican's art collection. In exchange, the Pope would become the Vice President of the company's new Religious marketing division, while two Microsoft executives would be vested into the church's College of Cardinals. Utterly ridiculous yes, but it seems that there are a lot of gullible people out there.
By Friday December 17th it appears that Microsoft had enough. They issued their own legitimate press story that condemned the church purchase story as being phony.

(*****
And for this week, that's all from the Amateur Radio Newsline.
You can write to us at Newsline, Post Office Box 463, Pasadena,

I have determined the coax (9913) I have connecting my shack to the tower has gotten water in it, resulting in a rather high swr all across the bands. Is there any way for me to purge or dry out the coax without pulling all 200 feet of it out of the underground tube? 9913 is such a bugger to handle, I'd hate to pull it! Any suggestions will be appreciated! KG5BR, Steve

If you want to receive in the 108-136 MHz range (which is as low as the 28A will go), there is no power-up key sequence. Turn the radio on, go into VFO mode, hold down the [F] button for one second (until the 'F' indicator starts flashing), then press the [LOW] button. On a un-mod'ed radio, it will go into the aircraft band (108-136). On a fully mod'ed radio, it will go into the 330 MHz band. If that is the case, do the key sequence mentioned above again. That will either take you back to the 2-meter/440-MHz band, or into the aircraft band, depending on if it's mod'ed.

Aside to Ed Velez...Yes, but the Command Module and the Service Module (a 1970 Ford and a same vintage Travel Queen camper) have been separated for repairs. Unfortunately, I don't have enough time/money to get them in shape and reconnected for the January VHF contest.
And don't pick on The Family Truckster...it's been adopted as the official vehicle of the J.P. Stevens Marching Hawks!

Re the three letter airport codes of which YYZ is paid homage in the Rush tune of the same name. I was aware of this; I live under a landing path for EWR (Newark International) and LGA (LaGuardia). My favorite, however, is New Orleans, easily remembered because of the way the city looks after Mardi Gras - MSY [messy :-)].

But, hey, thanks again for all the comments.

Are there other goos bboards? How do I sub. Also, I was readi ng , Ithink here, that someone suggested that someone ftp to funet.fi. Well I did this but I couldn't get by the Password thingie, or that USER command whatz oo any and all help would be great!!

# 4880. HAM vs ham

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-26 04:34:30 UTC
From: oo7@astro.as.utexas.edu
Message-ID: <3dlh4m$5r@geraldo.cc.utexas.edu>
Source record: 254377

Joseph Herman <herman@yu1.yu.edu> innocently asks:

>> But on that subject, tho - what's the origin of the term 'ham' anyway?

and

gfoley@freenet.columbus.oh.us (Gerard Foley) boldly replies:

>>Two theories of unknown origin - (1) short for amateur when said by
>>a cockney - (2) an unskilled operator, as in ham-handed.

Not forgetting two others that are also claimed as the definitive
answer - abbreviation for Home Amateur Mechanic (I think) and the
call letters of an early radio station.

This topic comes up about as frequently as the "can I use my HT
on an airplane" one. They both follow well-trodden paths for a
couple of weeks.

Personally, I would be happy if people stopped writing it "HAM",
which I claim comes from the association with "CB" in capitals,
and went back to writing "ham", without worrying where it comes
from.

I guess the kindest thing to say to the original poster is:

Welcome to rec.radio.amateur.misc!

## 4881. Price Police

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-26 04:52:38 UTC
From: marcbg@metronet.com
Message-ID: <marcbg-2512942252150001@net51.metronet.com>
Source record: 254428
Cross-posted to: rec.radio.scanner,rec.radio.swap,rec.radio.amateur.misc

I've sold thousands of $$$ worth of equipment on the net, and to date, I've dealt with good, honest folks who are looking for value.

You know, I'm getting a little ticked off at some folks who believe that they are the Price Police, feeling free to make snide remarks, both via Postings and e-mail concering the pricing of people's equipment. I'm not one to flame, but I'm pissed, so are many others of us, and let me explain why.

So, when I post a radio, and the price seems a little high, maybe it's because I'm testing the water - or maybe it's because you're looking for a REAL bargain - or maybe I want to see if there is someone who wants a quality radio at less than retail, but still wants value. Or maybe I'm clueless and really do want feedback!

I posted a radio recently which sells at a street price for over $450 - for $315. It took me two months to sell it because of smartass folks who posted to the newsgroup AND sent me mail with offers like "$175" or posted things like "I can get it for $350" etc etc etc. When I finally sold it, the guy I sold it too was TICKLED with the purchase, realized he saved 30% off the purchase price of a new radio yet still had all the value of buying a new unit. He even called after he received the unit and used it a while to thank me.

What pisses me off to no end is when I get cute little remarks BOTH via e-mail and postings that say things like "Good price - NOT" or "This is priced too high - you are trying to rip people off" or "What's the matter with you" or "Your price is ridiculous" - these are actual snips from actual email messages. I know many of you who sell things on the net have received them also.

Folks, this is a free market. If you have a beef with prices, then write the poster personally (Don't post it to the group) with something like:

"Marc - your price seems a little high. A new radio at XXXX costs only $ZZZ, and I was wondering why your price was so high. Just thought I'd let you know, and anyway, good luck".

That's what I do. A nice polite note. You know what? I've received phone calls thanking me, because the poster didn't have a clue that they were overcharging. But what type of response would I get with "Hey, are you trying to rip people off?" Probably not a good one.

OR, just shut up and save the bandwidth.

In the spirit of the season, I bope that those of you who are members of the Price Police take this to heart. Folks on r.r.swap, scanner, and r.r.a.m. are smart enough to judge for themselves - and if they're not, they can always post a message inquiring what the price of a particular used item should be. And if they're not that bright, well, then they should buy retail and stay out of the Usenet grabble.

If you have nothing better to do than to flame about someone's high prices, I suggest you are spending too much time in front of the CRT.

And to all, a Good Night. . . . .

: stuff, and we have tried some of them in other spots. We'd prefer to buy
: (or build) something modern that if necessary we can ship to a factory
: for support.

: Kevin, WB2EMS

As the bands get more more crowded, this is a common problem.
I can only suggest the obvious, to compete with commercial problems,
you may have to go the affordable commercial route.

I have run Mark IV, Vertex (Yeasu Commercial) and commercial Wanabes,
but keep going back to GE and Moto. They were meant to compete under
the worst of conditions. Over the past 15 years, I've been through
desence, poor reliability, intermod,..... and all seems to get better
when GE/MOTO take over.

Our current configuration consists of 9 GE-MVPs. One transceiving on
146, fout as 450 links receivers going into a voter, and four as remote
links. I meantion this because MVPs can be bought at hamfests for
around $50 and extremely reliable. The system has been running for
years now with NO failures and any site. FYI, MVPs are GE Mastr II
vintage with excellent front ends, excellent sensitivity and selectivity.
A preamp on the front end helps, but could be your weak like in the fight against 3rd order
products.

My humble opinion. John K3NXU jlamar@yrkpa.kias.com

OPDX/NODXA 1994 DX Survey

THE FOURTH ANNUAL OPDX/NODXA DX SURVEY FOR 1994
Here is your chance to be counted. Deadline will be January 31, 1995,
with results in February. The questions of the survey will deal with:

1) The DXer of the year. This is a DXer who you thought was outstanding
in operating and handling the pile-ups from their DXpedition.
2) DXpedition of the Year (Group and Indivdual). Choose the best and most
well organized DXpedition that met the needs of the DX community.
3) The 30 Most Wanted Countries. Choose your 30 most wanted countries.
4) OPTION: Your personal comments about DXing in 1994.

Please use the ballot below. Votes will only be accepted in the
following format below.

```

>and went back to writing "ham", without worrying where it comes
>from.

But Derek, if either of your answers is correct, then it *should*
be capitalized as either an acronym or a callsign. In the days
when it was coined, of course, it was capitalized since Morse
doesn't have lower case letters.

I don't know where the expression originated for sure, but I
believe we can safely rule out the Cockney explanation since
ham (or HAM) is chiefly an Americanism. I suspect that, since
Home Amateur Mechanic was the source for the plans to many of
the early amateur radios, many amateurs likely sent "RIG HR
IS A HAM RADIO" when asked what kind of station they had. Hence
HAM RADIO became the common expression for the service.

I doubt that amateurs would have voluntarily picked up on an
insult from the wireline Morse operators and adopted ham operator
from the insult "ham-handed". Amateurs have their own insult, LID.
I wonder if anyone would care to speculate on the origin and meaning
of LID?

Gary

# 4888. QRP-L at NEtcom.com blew up!

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-26 16:37:11 UTC
From: samodena@csemail.cropsci.ncsu.edu
Message-ID: <3dmrfn$cg6@taco.cc.ncsu.edu>
Source record: 254437
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antennas,rec.radio,amateur.homebrew,rec.radio.amateur.digital.misc

Thanks to Tim AB5OU...I've been alerted that we *all* were unsubscribed
from QRP-L at Netcom.com.

I was able to confirm his info (see forwarded message below). I resubscribed
by sending email to: LISTSERV@netcom.com
with no subject
and the msg was: subscribe QRP-L

The only thing it accepts after "subscribe QRP-L" is an address...
but if you put nothing there, it assumes you mean the reply address
on your email. If you put your name there, it will send an error
message back.

You can see how many are on the list by sending an email to:
LISTSERV@netcom.com -- no subject -- put msg: who QRP-L
and the list of current subscribers (about 15) comes back.

SO RESUBSCRIBE YOURSELF NOW! :^)

And send a copy of this message to a couple of others who you know
are on QRP-L...because they will need to resubscribe...

Until N1IST (got only his ansering machine) is able to alert or
restore the original mailing list, this round-robin method may
be the only way to bring most people back quickly.

>doesn't have lower case letters.

I had never seen it capitalized until a few
years ago, and it's mostly used by newcomers
to amateur radio. I doubt that they are the
ones to have the final word. They are the ones
who say "I am interested in getting into HAM..."

>>I wonder if anyone would care to speculate on the origin and meaning
>>of LID?

We went through that one recently as well.
Take your pick - coffee-can lid leaning against
sounder to amplify Morse code, or Later In Day
written on lower-priority telegrams assigned to
the newer ops. Probably some others.

As to what it means - well, we all know that...

# 4892. 120/240 battery charger?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-26 18:27:26 UTC
From: pmarsh@metro.mccneb.EDU
Message-ID: <9412261827.AA11468@metro.mccneb.edu>
Source record: 254442

The situation -- I travel, and various wall sockets provide 120vac 60hz (North America), or 240vac, 50hz (most everywhere else). 12vdc is not available, of course, in the average hotel. I need a battery charging device which will work on either voltage to charge Icom batteries -- (BP-131). Local catalogs don't even list a separate charger suitable for 240vac, let alone a combo unit which will work with both voltages.

I have used a battery charger for video camcorder batteries which could be plugged into just about anything -- no switches to adjust -- and works correctly from 95vac to 250vac, 40-70hz, according to the instruction manual, and according to my experience works correctly using 120vac and 240vac. The output voltage is not compatible with the Icom battery.

Advice appreciated.

I've always understood it to to refer to the practice of setting a tobacco can lid on top of the sounder used in landline telegraphy to amplify the sound and make it easier to read. Thus, if you needed a lid, you weren't very good at reading the code, and to be a "lid" was to be inept. Amateurs simply picked up on this use of lid from older landline telegraphers.

: >on a service one is unlicensed for, in fact, ANY freq, in a true EMERGENCY?
: >( I have extra amateur, but I'm thinking Ranger repeater or such)...????
: Well, it used to be a given that, for emergencies, anything goes so long
: as it resulted in a rescue.... but you must not have seen the uproar that
: ensued perhaps a year ago when a ham in CA (I think) had a 2 meter HT
: modified to operate on public service channels. He also had a cellular
: phone, and tried several times on all available ham repeaters and could not
: get a dial tone on his cellular, so he finally got through on a sheriff's
: office repeater which resulted in a rescue for a severely injured hiker
: the ham had found on the trail. All well and good, except the ham was
: called in by the local FCC office and ordered to surrender his "illegal"
^^^^^^^^^^^^
: radio or face charges for unauthorized use of a frequency he was unlicensed
: for.

I don't believe the ham was noticed at all by the FCC (more below).

: Evidently the sheriff's office was willing to prosecute, they do NOT
: want the public to carry around radios that are able to talk on their
: channels. Evidently the FCC agent in charge in this area concurred.
: I'd say in an emergency use whatever means you had to in order to get
: help... but be forwarned that unauthorized use of others' frequencies
: may carry an unexpected penalty even if you WERE doing a good deed.
: Jim WB5AOX

Per my comment above. As I recall (note my recollection is admittedly
anything but perfect so anyone else with better specific info please
add any corrections, etc.) the ham was "hassled" directly by the
sherriff's office, not by the FCC.

Certainly the FCC wouldn't have any legal basis to "confiscate" the
HT as owning such a modified HT is in no way illegal by virtue of
any FCC enforceable (i.e. federal) law(s).

My recollection seems to be that the sherriff's office confiscated
the HT and the ham decided not to pursue the matter any further
even though he had (by our opinion's anyway) darn good reason's
for the one time emergency call for help. I think the sheriff's
office essentially worked it along the lines of...surrended the HT
and we won't try to prosecute you for (insert whatever law(s) the
sheriff's office thought may have been broken, if any.

IM> appreciated! KG5BR, Steve
IM> -
IM> STEPHEN BOSBACH MWVW57A@prodigy.com

You could try removing the connectors from both ends and blowing 'til
you're blue in the face ! :)

But really...I hate to be the bearer of bad news but water ingress thru
your coax will *probably* result in permanent damage by way of corrosion
and is virtually to impossible to dry out therefore replacement is the proper
cure. In fact, coax does have a lifespan and *should* be replaced every so
many years. Commercial braodcast stations replace their feedlines at
regularly scheduled maintenance periods.

Marc B. Grant (marcbg@metronet.com) wrote:
: I've sold thousands of $$$ worth of equipment on the net, and to date,
: I've dealt with good, honest folks who are looking for value.

: You know, I'm getting a little ticked off at some folks who believe that
: they are the Price Police, feeling free to make snide remarks, both via
: Postings and e-mail concering the pricing of people's equipment. I'm not
: one to flame, but I'm pissed, so are many others of us, and let me explain
: why.

: I posted a radio recently which sells at a street price for over $450 -
: for $315. It took me two months to sell it because of smartass folks who
: posted to the newsgroup
^^^^^^^^^^^^^^^^^^^^^^^^

Posting things for sale in the newsgroup lends itself to whatever comments
anyone wishes to make. That's what these newsgroups are all about.
The fact that other's opinions of your selling prices may make your
ability for a quick sale difficult is really not an issue...that's the
nature of the ongoing dialog internet newsgroups foster.

: AND sent me mail with offers like "$175" or posted
^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^

You advertise an item for sale and you don't expect counter-offers,
even rediculous ones...then don't advertise on the net, simple no?

: things like "I can get it for $350" etc etc etc.

Again, nothing wrong with these statements last time the first amendment
was checked.

: When I finally sold it,
: the guy I sold it too was TICKLED with the purchase, realized he saved 30%
: off the purchase price of a new radio yet still had all the value of
: buying a new unit. He even called after he received the unit and used it
: a while to thank me.

So what's the complaint? Yes, I know see what follows:-)

: What pisses me off to no end is when I get cute little remarks BOTH via
: e-mail and postings that say things like "Good price - NOT" or "This is
: priced too high - you are trying to rip people off" or "What's the matter
: with you" or "Your price is ridiculous" - these are actual snips from
: actual email messages. I know many of you who sell things on the net have
: received them also.

Then don't advertise on the net...it is that simple.

: Folks, this is a free market. If you have a beef with prices, then write
: the poster personally (Don't post it to the group) with something like:
: "Marc - your price seems a little high. A new radio at XXXX costs only
: $ZZZ, and I was wondering why your price was so high. Just thought I'd
: let you know, and anyway, good luck".

In my several years of net involvement I've received email I didn't want
or replies to my posts that I'd have preferred not to have been so
posted, BUT I don't recall ever trying to gag anyone else from making
whatever posts they want.

: That's what I do. A nice polite note. You know what? I've received
: phone calls thanking me, because the poster didn't have a clue that they
: were overcharging. But what type of response would I get with "Hey, are
: you trying to rip people off?" Probably not a good one.

So delete the email or mark the newsgroup post as read. If a serious
valuation dispute exists it will get it's fair hearing in the internet
market-place of ideas, if your price is reasonable you'll quickly sell
whatever it is you've offered for sale.

: OR, just shut up and save the bandwidth.

See comments below.

: In the spirit of the season, I bope that those of you who are members of
: the Price Police take this to heart. Folks on r.r.swap, scanner, and
: r.r.a.m. are smart enough to judge for themselves - and if they're not,
: they can always post a message inquiring what the price of a particular
: used item should be. And if they're not that bright, well, then they
: should buy retail and stay out of the Usenet grabble.

And in the spirit of the season, recognise that those smart
enough to do so will separate the wheat from the chalf and things
will go on.

: If you have nothing better to do than to flame about someone's high
: prices, I suggest you are spending too much time in front of the CRT.

I'm always amazed at how other people seem so informed as to question
how anyone else spends their time. Frankly, if someone gets their
jollies participating in internet dialog, email etc then why should
I or anyone else care if they do it 24 hours a day, seven days a week.

: And to all, a Good Night. . . . .

And a Happy New Year to all too :-)

--
Bill Sohl K2UNK (Budd lake, New Jersey) (billsohl@planet.net)
This is my opinion and I don't have to give a damn about what anyone
thinks because this is a personal internet account :-)

The newer ICOM fast chargers use seperate transformers to run them. I have one
that charges the BP-84, etc. and a newer series with an adaptor. You can get
a generic 220v->12v transformer during your travels.

W&W associates sells a charger called the "MasterCharger I". It has
replaceable cups for just about any ht battery you can come up with.
The unit is supplied with a 120->12v transformer, but a 220->12v one is
available. I recommend the unit highly.

My local ICOM dealer has a 220v charger for one of the Icom HT's, so they
are available from ICOM in the U.S.

I would NOT recommend buying a charger overseas as ham gear is taxed to death
in most places.

Many hotels have a switchable 220/120v socket in the bathroom for razors.

Geoff.

I have to agree with the free-speech issue of the usenet. What do you think it's like at a hamfest ????? Do you see vendors going up to people and telling them not to talk to others about their prices ??? Of course not.....and you shouldn't expect to try the same thing here either.

# 4902. RE: Radio Amateur Newsline #906 23 Dec 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-26 23:24:56 UTC
From: walker_d@ix.wcc.govt.nz
Message-ID: <3dnjc8$mid@golem.wcc.govt.nz>
Source record: 254451

In an article on NZART Morse Code policy, a statemant was made that it was "ORACLE's position that all Morse Code testing should be abolished world wide."
At no time has ORACLE ever stated that it seeks the abolition of the morse code testing. The following is a statement from ORACLE on this matter:

ORACLE IS NOT ANTI-CW
---
We have had feedback indicating that ORACLE is trying to do away with Morse code in amateur radio. This is incorrect.

We certainly are lobbying for a regulatory change so that there can be a choice in the means by which candidates obtain full qualifications. Under ORACLE policy, Morse code testing would be maintained as one of the alternative ways of qualifying.

ORACLE recognises that some amateurs are keen on using CW and supports their right to do so. The future of CW activity in amateur radio will continue to be mainly in the hands of CW interest groups. ORACLE members appreciate that the proposed regulatory change does not affect their personal preferences.

NO FREE LUNCHES EITHER
---
ORACLE policy takes into account the following factors:
* there are a range of interests in amateur radio, and
* this should be reflected in the subject material of the amateur examination syllabus.

Examples of possible new examinations are:
* keyboard skills
* digital radio techniques.

Any alternative syllabus option needs to be of similar challenge to the standard set by the 12 wpm Morse test (or equivalent tests within each administration).

All amateur examinations, other than the Morse test, allow for candidates with different strengths and weaknesses in different subjects to be able to obtain a pass if they muster sufficient correct answers. Amateur radio is the winner for having operators with a diversity of skills and interests.

In summary, ORACLE policies are to:
* maintain overall qualifying standards
* include traditional options for qualifying
* introduce modern alternatives to Morse tests

* let every individual have a choice of what to do

We believe that ORACLE policies are balanced and inclusive.
They are not anti-CW and they are not aimed at abolishing morse
code testing.

# 4903. QRP-L mailer bombed

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-26 23:39:08 UTC
From: Mike.Czuhajewski@hambbs.wb3ffv.ampr.org
Message-ID: <1994Dec26.183908.11361@wb3ffv.ampr.org>
Source record: 254455

For those of you who think you are subscribed to the QRP-L mailing list at netcom.com, don't count on it! Apparently the thing suffered a computer burp of some sort and dumped just about everyone; N2CX just sent me a copy of a message someone sent him, with the bad news, and advising everyone to resubscribe and tell everyone they know who is on the list to do the same. (Guess that's why it was so quiet; and I thought it was just the holidays!) To resubscribe, send e-mail to listserv@netcom.com, and for the text say subscribe qrp-l. According to the original message, someone had tried to get N1IST on the phone but just got his machine so don't know when or if the original list can be restored. In the meantime, to be safe you should go ahead and resubscribe. 73 and Queue Our Pea DE WA8MCQ

# 4904. QRP newsgroup/mailer vote again

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-27 00:07:37 UTC
From: Mike.Czuhajewski@hambbs.wb3ffv.ampr.org
Message-ID: <1994Dec26.190737.19085@wb3ffv.ampr.org>
Source record: 254278

Attention QRPers: I blew it, as became immediately obvious when the first replies to my private straw poll trickled in. I should not have restricted the poll to just people who had subscribed and then left the QRP mailing list. There are a number of people who are interested and know about the list but chose to not subscribe, having been warned of the volume of e-mail on the list, and their votes and comments are just as important, or perhaps more so.

The poll continues, but open to anyone interested in a QRP forum, whether or not you were once a subscriber to the QRP list (originally on think.com and now on netcom.com). Would you prefer a QRP mailing list, which we have now, or would you rather see a newsgroup?

Send me your votes and comments via private e-mail. In accordance with proper netiquette, please reply only to me, not to the newsgroup where you see this posting (r.r.a.homebrew and r.r.a.misc) nor to the QRP list. I will tally the votes and comments later, and announce the availability of the complete file to anyone who wants me to e-mail it to them.

A reminder--this is a personal, private straw poll, completely unscientific and unofficial and nonbinding, and is not an official vote on establishment of a QRP newsgroup. The topic continues to simmer, and if it ever comes to a head, an official call for votes will be announced through proper channels.

73 DE WA8MCQ@hambbs.wb3ffv.ampr.org.

: without actally having the certification of 5WPM from the FCC?

This is entirely legal. In fact, it's legal for any ham to use CW on
any frequency allowed by his operator's license (97.305a). Of course,
Technicians can use all amateur frequencies above 50 MHz. So CW on 2
or 6 is OK.

This is probably not a good place to post this, but it seems to be the best of what's available, so...

Does anyone know what frequency the Invisible Fence transmitters transmit on? (Invisible Fence is a system where your dog/cat wears a receiver collar that jolts them with about 7 volts if they get too close to the buried antenna wire.)

Thanks...

You don't need to pass a test to *use* Morse. The FCC isn't afraid you'll send bad Code. Morse testing is just an artificial barrier erected to your use of HF. In fact, you are authorized to use the only 2 A1 exclusive band segments in all of amateur radio, 50.0-50.1 MHz and 144.0-144.1 MHz as a Tech. Note however that what you are proposing isn't A1 emission. What you're proposing is MCW or F2 emission. You can use that too, but not on the A1 exclusive frequencies. 97.305 says that MCW is legal on all frequencies above 50.1 MHz except 144.0-144.1 MHz.

# 4915. Kenwood TM-733A bugs

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-27 02:58:48 UTC
From: lynch@bluto
Message-ID: <1994Dec27.025848.8763@newsgate.sps.mot.com>
Source record: 254463

I have been having two very annoying problems with
my Kenwood TM733A. First, if I have selected the
carrier activated scan resume mode (as opposed to the
default time activated mode) and I send DTMF tones
to dial a number on an autopatch, the carrier activated
mode is cancelled. Second, from time to time after
I have pushed the power off button, the remote display
goes off but the radio itself does not! Plus, when
you push the on/off button again (to turn on what you
believe to be an off radio) the display remains dead.
The only way to rectify the sitiuation is to momentarily
disconnect the main power source from the radio so
it can do a reset.

I have discussed both these problems with the Kenwood
service center. They said they knew of the second
problem and were working on a fix which could then
be implemented at authorized service centers. The
guy I was talking to, however, was not so sure about
whether or not the first problem was widespread.

Has anyone else out there experienced these problems?
If so, have you had any success in getting them corrected?

Thanks,

Scott Lynch

Ir> possible to help save their lives in an emergency.
Ir>
Ir> Rich/WH6NU
Ir>

Joe is correct Rich...the main reason for not using radio equipment
inside the aircraft has to do with possible interferance to the avionics
and instrumentation. I don't think that they're too worried about radio
receivers but transmitters are a definite no-no ! This includes
cellphones, amateur radios ect...
You might say "what are you talking about...airplanes already have
tranceivers and even cellphones in them..."
The big difference is that the are properly installed, controlled and
tested for the possibility of interference.
A passenger's radio transmitter may interfere unknowingly with the
aircraft's navigational equipment which could be catastrophic to the
operation of the plane. The transmitted signal would be bouncing around
inside the structure of the aircraft whereas the radio equipment of the
plane transmits into externally mounted antennae.
The likelyhood is low but the consequences are high so...
better safe than sorry !

This might be obvious to you but many hospitals are now banning the use
of cellphones and other radio transmitters... a lot of their patient
monitoring is done by RF links and of course the risk of intereference
is not acceptable.

Yes, there is no limit to your amateur privaledges for 50MHz and up.
You have full operating privaledges, including CW even though you
have never been tested for CW.

As for your use of a CW practice oscillator...sure, why not? There's
no reason you and one or more others couldn't have practice
sessions on the air, etc using such a method.

Remember too, you can use CW anywhere in the band(s)...you are not limited
to 50.0 to 50.1 or 144.0 to 144.1. The ARRL sends CW practice
sessions on 147.555 as I recall.

Keyboard skills?? Does that mean a typing test? Or does he mean "computer skills"? And what would THEY be?

What kind of digital techniques? Decoding AX.25 packets by hand? Lots of people make a lot of noise about "digital skills" but I really don't see how it's all that relevant. What would they ask on the exams? How to hook up a teletype machine? How to hook up a TNC to a radio? Big deal. I guess I don't understand what the big deal about all the digital stuff is. 99% of the "digital" operators are just as much appliance operators as anyone else. Being able to decode an AX.25 or IP packet by hand says nothing about your ability to operate a radio.

I'm not pro- or anti- CW, I really don't care about it one way or another. I'm just a little tired of all the bally-hoo about 'digital skills".

Absolutely FANTASTIC 2m opening going on right now (Tuesday 0426 GMT) in the Midwest.

Would be interested in sharing observations with folks who are catching it, or caught it (if you're reading this in the past tense...does that make sense?) .

Working 2m FM is sort of utilitarian for me...until you work into Michigan from East-Central Illinois. This is pretty cool!

Cheers,
Sean

I am quite sure that whenever coax gets really wet, the braid
will start oxidizing, and rotting away. If you just noticed the
water, it's been there for months. Even if you could dry it out
(you can't) it's a lost cause. Chuck it. And, 9913 is notorious
for absorbing water, it is not a good choice for underground
cable runs. -pat

Very true!! Be sure that you spray some other type of paint over the
conductive coating AFTER you have made your ground connections. I had a
problem with a "dumb" terminal that I used on packet. Spraying made a
substantial difference but the stuff does flake off eventually.

I can't speak for Marc, but I don't think his intent was to limit free
speech in any way. I interpretted his remarks to mean that we can
freely express our opinions in a more constructive and courteous
fashion.

Perhaps another way to illustrate his point is to compare 11m vs. 40m.
If you ask for a signal report on 40m, you will probably get a response
like "Your coming in here 5x9", as is customary and expected on 40m.

Try this on 11m and you'll probably have multiple responses of the
following type:
"Shut up a**hole"
"Yes, it works, jerk", etc...

God forbid if the voice asking for a signal report is female. The
response won't contain an ounce of useful information, rather a
multitude of overzealous hackers offering to prove their manhood.

98% of the time, 11m is truly wasted bandwidth.

Again, I can't speak for Marc, but I believe he is saying: let's
not degrade r.r.s to the same level as 11m.

Anyone have the little Gray/silver "Heil Sound" amp / spkr - this one was sold about 10 years ago. It has two amps in it, one for the built in speaker, one accessory, about 5 watts or so (I see this in an ad from a 10 year old QST). It has a 5 pin DIN plug on the back and a 12 volt connector of some type (like Yaesu and Icom HT battery connector jacks). I would like to find out the pinout on the DIN plug and the correct polarity for the 12 v jack. It looks like just the ticket to use my NorCal 40 here at home. Anyone know about these things?

Source record: 254447

I've seen this subject once before on the internet, but never caught a definitive answer. I currently have my Tech Licence, but am trying to learn CW for the HF privlages. Is is within FCC rules to use CW on my freq band privlages (50Mhz+) without actally having the certification of 5WPM from the FCC? I would like to work practice QSO's with some other hams in the area on 2Meter for practice. Is this legal? I planned on using a simple practice code device to generate the tone, and feed it through the mic, or directly into the mic jack. Any opinions?

Source record: 254299

I got my hamcom30 and interface working over the holidays and was able to decode cw and rtty and some amtor. But the rtty and amtor stuff are all new modes for me. I have no problem recognizing the rtty stuff and I guess right on the amtor stuff occasionally but there are other digital transmissions going on in there too. I thinkl I recognize some packet gateways operating but there are some I just can't seem to decode. If I knew what theywere maybe I could getthe right menu selections and have better luck.....Can anyone provide a quick tutorial on how to recognize some of these signals? Are there any resources for learning how to operate these modes?

>

Just use the phone/modem port. standard modem cables work, or you can wire
your own. rolling your own is useful, especially if you want hardware
handshaking. if you're having trouble finding the right cable, get an old
imagewriter serial cable and chop off the db25 end. this gives you a good
shielded cable with the 8 pin connector on it.

here's an interesting hack for the kpc-3 that relies on the low power
consumption. get a MAX734 evaluation kit from Maxim (about $20, 800-998-8800).
this is a switching supply that puts out +12v at up to 120 ma. it will produce
+12 at the load the kpc-3 needs with about 4 volts in. i sliced down the
max734 evaluation kit pc board so that it would fit inside the kpc-3, diode
or'ed the plus suipply lines together, and ran the input of the max734 to the
db25 connector pins using the option jumpers on the board. my db25 to mac
cable has two plugs- a mini-8 for the serial port, and a mini-4 to the adb
port where i steal the power for the max734 to run the kpc-3. both cables are
about five inches long. i velcro the tnc to the top of my powerbook and with
my 2 meter ht have a very portable packet station.

From: i9261739@unicorn.it.wsu.edu
Message-ID: <D1Gq4G.Kz0@serval.net.wsu.edu>
Source record: 254283

What's all this talk I've heard about the FCC going on-line? Something about new hams not having to wait for their paperwork to arrive in the mail before going on the air. That they can go on the air as soon as their name is in the database? I heard a date of Dec. 20th as the starting date for this new system.

Is there a way to check the database yourself, say on the Internet or through a modem number? Or does a person need to call the 800 number and ask the already busy people in Gettysburg?

Thanks in advance for the info.

73's

>D/ All of the above

Apparently, you choose to ignore ORACLE's intent to
provide OPTIONS to the code test (such as tougher
theory testing in an alternate area) and only look at
their desire to eliminate the Morse REQUIREMENT.

>What's the problem with learning CW ? Sure it's old. Sure there are
>modern versions of digital transmission. SO WHAT ?
>CW still has it's place... Let me see how well a machine can compile
>a broken/low level QRP & QRM ridden message. Bet you a human could do a

I guess that's why NASA and JPL use Morse Code rather
than DSP-based digital modulation (similar to CLOVER) for all their
"deep-space" satellite work. ;-))

>When the day comes that a machine can fill in the blanks
>and anticipate the next characters of a marginal signal then I'll
>listen.

It's called "forward-error-correction" and machines DO do that.

The mode used depends on the data you want to move. No mode
is all-encompassing. Certainly CW need not apply.

>If a blind or handicapped or very young or very old person can do it,
>what's your excuse ?

Hmmm...does wanting to do more than just
yack and collect post-cards count?

Or is it that I must first pass some tribal initiation
rite before I can move on to what interests me
on HF? After all, it was you who said "there are

modern versions of digital transmission".

> CW forever !!!

Well, not quite forever. Only until you all die off or
commercial RF sucks up all bands from 2-meters and
up and the amateur radio service virtually dissappears.

IMO, ORACLE is not about REDUCED requirements. It is
about testing requirements relevant to the RF communications
methodologies of the 1990s and beyond.

Operating even a scanner is ILLEGAL under FAA rules.....you may NOT operate any radio device onboard UNLESS you have prior approval of the CARRIER!
(then you have to have the capt's permission...but the airline must say ok FIRST!)...

What you have done is possibly put yourself in a liability situation if something happens....the scanner COULD interfer with ADF and DME equipment on the plane causing it to go off course, etc...

DONT do it again!

It took you two months to sell it because you had it priced too high
to sell quickly to well-informed buyers, that's all. The purpose of
posting mail order prices etc. to the newsgroup is to help buyers be
well-informed. Remember, it's an *information* exchange.

>What pisses me off to no end is when I get cute little remarks BOTH via
>e-mail and postings that say things like "Good price - NOT" or "This is
>priced too high - you are trying to rip people off" or "What's the matter
>with you" or "Your price is ridiculous" - these are actual snips from
>actual email messages. I know many of you who sell things on the net have
>received them also.

I agree flaming is inappropriate unless it looks like the seller is
deliberately trying to find an uninformed buyer to overcharge. But
any beef against informational non-flaming posts seems self-serving on
the part of the seller.

>Folks, this is a free market. If you have a beef with prices, then write
>the poster personally (Don't post it to the group) with something like:
>
>"Marc - your price seems a little high. A new radio at XXXX costs only
>$ZZZ, and I was wondering why your price was so high. Just thought I'd
>let you know, and anyway, good luck".

I disagree. The content of that letter is ok, but it should be posted
to the group, not sent privately to the seller, since prospective
buyers need this information even more than the seller does.

John - as long as you're operating on frequencies allowed by your license class, and as long as you aren't deliberately "encrypting" the content of your messages, it is perfectly legal to do as you describe. Also it's a good idea as it will be a good way to practice, although I think you need to do some of your practicing either with experienced hams (who can push you a little bit) or with tapes/computer programs which can let you know what "good" CW sounds like. Your NC-tech friends (as well as most novices under the old system) will very likely be sending crummy CW. 73 and good luck - Alan NS0B

Richard Horwitz (rickhz@indirect.com) wrote:

: I am interested in working the county hunters net mobile
: and would like to know which if any of the Arizona countys
: are considered "rare". Also what if any awards are
: availale for mobile stations.

Although I have been inactive of late, I have had quite the interest in County Hunting. The SSB net meets on 14.336; the CW net (which often runs uncontrolled) meets on 14.056 +- QRM.

In general, most county hunters try to collect them all by working mobile stations only. Many mobiles run their counties on the way to business trips, vacations, etc. If a county has an Interstate through it, it is usually not rare. The exceptions to this are those that the Interstate crosses just a corner of the county; often the mobile is not in it long enough to run it. Also, believe it or not, some of the big cities are a bit tough; many mobiles who operate and drive shut down to concentrate on traffic.

The tough ones are those that have only state, county or local roads. In general, the tougher the drive, the more rare is the county.

I prefer to run on the CW net. On SSB, on a busy day it can be hours between turns on the net. On CW, even if there are a few others running, I can usually squeeze in my county without having to park and wait.

So long as you're transmitting in a tech band, and outside of the cw
subband, this is not only legal, it's an excellent way to learn. Go for it!

Have fun

Howie N2WX imotion@iu.net

It's legal. You have all amateur priviledges (and responsibilities) on amateur bands above 50MHz.

Good luck! Sounds like a good idea to me.

The ARRL Handbook describes a keyer kit (CMOS II, I think) with some parts available from Idiom Press in Deerfield, IL. Does anyone have a phone number for this company? If you do, would appreciate an offline reply.

If there is another source of supply for the PC board, manual, and parts for this kit, would also appreciate that info, too.

TIA es 73

CLINT SUGGESTED BUYING>>...book entitled NOW YOU'RE TALKING...

DAVID RESPONDED>>Is their a version available for dos or windows?
Hopefully Dos?

Do you want an excellent program to quiz you on the entire pool of Exam
Questions - and will print out Sample Tests for you, too?

Novice/Technician Class Manager

FEATURES:

- Simple, intuitive system for preparing for Ham License
Examinations
- Perfect tool for Volunteer Examiners for creating tests
- Manages entire question pool
- Begin reviewing at any question
- Review questions sequentially or randomly
- Shuffle answers for each question if desired
- Take a test from randomly chosen questions (within the
guidelines of the FCC testing criteria)
- Full set of options for customizing tests, including a Test
Design Screen
- Print complete tests, along with answer sheets and score key
- Save tests to disk for later use
- Study assist screen tells you what areas you need to study after
taking a test
- Pop-up on-screen calculator
- Automatically "remove" a question from the "question card deck"
when answered correctly, if desired
- Manually remove any question from the "deck" at any time
- Reinsert into the "deck" any previously removed question
- Start review all over by putting all "cards" back into the deck
- Show answers always or only after an attempt at the answer has
been made
- Saves option settings, deck, and last question number to disk to
"pick up where you left off"
- Print any part of the question pool

Versions available for DOS and WINDOWS

Date: 1994-12-27 18:56:58 UTC
From: gbrown@unlinfo.unl.edu
Message-ID: <3dpo1q$57s@crcnis3.unl.edu>
Source record: 254239

There have been several responses to this question, but some may be misleading. Gary Coffman's response is the most accurate...note that feeding tones into a microphone is _not_ considered A1 mode and would be illegal on the "CW only" sub-bands. Morse Code itself is not a "mode" as defined by the FCC.

It _is_ correct, however, that you can use Morse Code without taking any test...but you must be sure the actual mode you use is permitted on the frequency you choose. See references defining the various modes and permissible frequencies.

Allow me to be the Grinch...before "common usage" creates an entirely new word...

What everyone is talking about are not mnemonics, of course, but phonetics (and funny ones, at that.)

Mnemonics are little tricks to help one _memorize_ something. Phonetics are used to help one communicate something clearly. Of course, Real Hams (tm) don't really need mnemonics, especially for their own calls (or do they?). And of course, funny phonetics should be reserved for the internet, or chats with your friends who already know your call. Use of "cute" phonetics under conditions where phonetics are really needed is not very effective.

Back to the fun. (I really _do_ have a sense of humor, but it's probably important to point this out for the sake of new hams reading this thread who may be about to step into some bad habits.)

Happy Holidays!

# 4963. Re: Price Police

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-27 19:29:07 UTC
From: marcbg@metronet.com
Message-ID: <marcbg-2712941328420001@net205.metronet.com>
Source record: 254303
Cross-posted to: rec.radio.scanner,rec.radio.amateur.misc

Whew. I knew I'd receive mail on this, but the magnitude is amazing. As many can tell, I am merely trying to raise this issue, since I've never seen it presented here before.

As for the comments I've received as to Hamfest pricing, it's alot different when you're dealing with someone in person - at least you usually respect them, even if they are trying to sell a HT-101 for $950. You may wonder what they've been smoking, but at least you look at the price and move on, scratching your head.

Another valid sentiment I received is to simply ignore the comments and keep on chuckin' - which is what I've been doing for three years now. I think with the advent of AOL, CIS, and the general internet explosion, we have more traffic, and despite the Usenet Sale Guidelines (which no one seems to read anymore!) there's alot of extraneous comments about pricing which just seem downright rude.

I've changed my tune on one item - IMHO, it's alright for the person complaining about the price to post an email and newsgroup message - but for crying out loud, do so in good taste! It IS a good method for those unaware of pricing to see the general flow of things and determine for themselves if the item is overpriced.

Don't get me wrong - I'm not for ripping anyone off - never have and never will be. But, there's fair pricing, there's outrageous pricing, and then there's pricing that makes you wonder if you'll burn your hand when you touch the unit.

If this discussion turns a light on in one person, then I've accomplished what I was after - raising the consciousness of sellers AND buyers on the net concerning pricing, courtesy, and common sense.

My Yaesu FT-727 has finally stopped transmitting on both bands. So
it's time to get it fixed. As I'm loath to screw around inside tiny
little boxes with components smaller than my eyes can readily make out,
I'd like to send it somewhere to get it fixed. If you've had good
or bad experiences getting Yaesu HTs repaired, I'd like to hear
about. I'll be glad to post a summary if there is interest.

73,
Todd
N9MWB

Hello,

A couple of weeks ago I seem to remember a posting of ARRL
Internet Addresses. For reasons that are obscure I did not save
it. If someone has a copy would you Email it to me. Thanks
a lot.

On a slightly different topic does anyone know if Amsat has
an Internet address.

My ancient FT203 died back in 1991.
I called Yaesu in California, and they estimated repair at about $150.
I sent the HT to them, and they sent a leter saying "did I really want to
fix that old HT?"
I called and said yes.
They fixed it and it works today as my packet 2meter radio.
And it works very well ...
And after the estimate of $150, they billed my credit card just $90.

## 4972. Snowbirds die in desert

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-28 00:31:51 UTC
From: copeland@fohnix.metronet.com
Message-ID: <3dqbln$ifp@fohnix.metronet.com>
Source record: 254324

There was a story in the newspaper today about an elderly couple
who were traveling south for the winter. When in Arizona their
truck (RV?) got stuck in the sand (must have been off road?).
The couple split up to look for help. The husband died, but the wife
survived five days with no food, just some oranges.

If they had had an HF rig this wouldn't have happenned.

I was wondering about 2m coverage in desolate places like
"the badlands". Are there repeaters out in places like this?
I remember going through one spot in the badlands that had nothing
for seventy miles, and a sign warning about this.
Seems for three hundred miles there there is almost nothing at all.

>Callbook database search engine!

The source is for UNIX and the search enginge that it uses is built
into UNIX. i.e it doesn't work with non unix systems.

The QRZTECH.TXT file does give enough info on the database structure so
I was able to write a small, QRZ search engine that JNOS uses to access the
qrz callsign and name database.

[sig omitted]

Yeah, the FCC is taking new ham license applications (new only, not upgrades) from the VEC's via data over the phone. I'm not sure of a way to check the new licenses via the internet, but I do know you could have your call within 48-72 hours if the VE team forwards the applications electronicly to the VEC office. I think you'd get a phone call from the team that tested you with your call. Look into it a little more by contacting the W5YI-VEC in Dallas. They jumped on the bandwagon rather quickly. That's the VEC I'm a contact for in Hawaii.

Hope that helped, mate. 73's and aloha!......Rich/WH6NU

This advertisement is for the QRZ! CDROM that they offer
at full suggested retail price of $29.95, same as direct
from Walnut Creek. You can order the same CDROM from
Radio Devices (New January release due in 3-4 weeks)
for half the price. If you want the current release,
I have a few left for $11. Accepting orders for both now.

For the new release, I wont deposit your check until the
CDROM is shipped from here.

Email me for ordering information.
I wont be undersold on QRZ!

```

## 4980. Water in 9913

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-28 03:40:03 UTC
From: bill@halcyon.COM
Message-ID: <199412280337.AA16578@halcyon.com>
Source record: 254313

If you have 9913 with water in it I would disgard it. It is impossible to get all of the water out. Condensation will continue to cause problems for you.

In the future make sure the tower end of the 9913 has an adaquate weather seal.

Its an expensive education.

73,

Bill

>

If I am not mistaken, Belden 9913 has a contaminating type jacket, which I believe means that it is not waterproof. I have heard the same story a lot from hams that live in wet climates back east. Fortunately, here in Central California, we tend to have very dry weather both summer and winter, and we don't get much water ingress with 9913.

There are several Belden 9913 replace/equivalent coaxes on the market now that are advertising a non-contaminating jacket. They may be a better coax instead of 9913 for those in wet climates.

Speaking of which has anyone reported on the new 9913 replacement coaxes? I tried some of the 9913 equivalent coax from Cable X-Perts. It had tremendous loss on 1265 Mhz, in fact, it was totally unusable on 1.2 Ghz. It looks just like 9913, but it does not seem to be consistent quality throughout the two 500 ft rolls that I got. I ended up giving most of it away to folks to use on 2 meters. I tried some of the new Cushcraft Ultra Link cable, and it worked great at 1.2 Ghz. Anyone else try any others?

Rick

After playing with HAmcomm30 over the weekend...I tried out out the ezsstv program that was mentioned here a while back since it used the same interface. Wow....It's great.....All I had to do was run the program (on my 286/12 Mhz machine with VGA) , tune a station sending sstv on 14.230 and there it was.. a full color picture being built line by line on the screen. Nothing to it...the program even figures what format it is being sent in and switches to it automatically...

Now I want to send pictures..One of the guys on the air said there was a freeware or shareware program called JVfAX of VJFAx that he was using. His pictures looked great....Does anyone know of an FTP site where it can be found.Ilooked at oak.oakland.edu but couldn't find it. How about the vester stuff that ws in last month's QST.

The demo version I was using only receives but saw no mention of price and availablity of the fullblown version.

K00L! Like most people, I'd love to just accidently run into
an old hero like Jean on 2mtrs but I'm afraid I wouldn't know
what the heck to say if I did. Thanks for just being crazy in
instead of seriously insane like the rest of the world was in
1967? Seems a little lame. But that interview with the guy from
Venus convinced me I was far better adjusted than I previously
realized :). Nice to know he works 2mtrs as well as HF cw. Maybe
if I got a kazoo and sat on 20mtrs calling CQ ...

foggy,
Gary Harland, n8oau

I'm not sure if you are refering to "THE Badlands" (in the Dakotas) or generic badlands. As far as 2m repeaters being available in desolate areas, the answer is yes, sometimes. On our vacation this summer we drove from Illinois to L.A., leaving only days after my son and I received our Tech tickets. In anticipation of the trip and hoping that we would get our licenses before we left, I installed my mobile in our van. We used the radio all the way out. There were a few areas where we heard no radio activity, but that doesn't mean there weren't repeaters around. The most impressive thing about the trip, hamwise, was the linked repeater systems out west. We happened on one called the Zia Connection in El Paso. Our first contact from El Paso was with someone who was in Phoenix at the time. The Zia extends from El Paso on the east (perhaps Midland, but the repeater there was out) to Quartzsite California on the west (on the AZ/CA border), to Yuma southwest, and up toward Albuquerque. So, we were almost always within radioshot of the Zia the last half of our trip. There are also seeral other linked systems out there as well. Northlink runs across northern Arizona (but had a repeater down while we were out there). We made contacts on another system in northern New Mexico which ran well up into Colorado and Nevada. My son, who is 12, got more radio experience in those few days than he could have hoped to have gotten in a year around home. And, we felt that if we ran into problems on the road that we almost certainly would have been able to reach someone on the radio. Of course, this is for only the SW part of the country, and I don't know how this might apply elsewhere. One thing about out west, though...most of the repeaters were at high elevations, and we were hitting repeaters 60 miles away.

BTW, if anyone in western netland runs into Barry, N5EOV on the air, tell him that Steve N9XDC and Eric N9XDD send their 73's.

-Steve-

Anyone have any ideas what the best LOGGING software around is? It has to support Packet TNC, control ICOM, logging etc etc.
Thanks.

I can't resist bragging....I worked Shep sometime in 1972 when I
was a high school junior in NJ and he was hitting his stride on WOR. Fully
POSSESSED by Shepherd at that time (critical age, as my contemporaries will
know) I almost wet my shorts when he joined a roundtable QSO on a NYC
repeater (WA2SUR/R). We were talking about a guy who inadvertantly left
his corvair running while at work. The car survived eigh hours of
idling, but it didn't overheat as some in the QSO expected. Similar
car-stories were conveyed, and somehow Shep and I discussed how fussy Jaguars were. I
knew he had a Mark II, so I was the provocateur of this topic.
Shep explained he was borrowing someone's 2 meter FM rig and was
sampling what this mode was all about. I never heard him again. He
always said he was a serious 20 meter CW man, but I've never encountered
him there, either. Shep was a big influence as I grew up; he was
one of the reasons why I got my ticket in the first place! Shepherd was a
wonderful radio personality when AM radio was a kinder, gentler medium.
Don't you agree?

FLICK LIVES!

I live here in Arizona, and do lots of traveling off the beaten path.
I recently got my license, and have been experimenting with where I
can make contact with 2m and 73cm. Nearly all of Arizona seems to be
within repeater range, at least if you climb up a nearby hill. Granted
when you are in a deep canyon, it's pretty hopeless, but on a hill, you
are almost sure to be able to reach a repeater on a nearby mountain,
sometimes not so nearby.

At least everywhere I have been so far, I have been able to hit something.
There are places with no towns for 70 miles, but that is usually on
true 4WD roads, where you should be carrying emergency gear anyway.

Hear, here! (Here, hear?)

Using funny phonetics on the local repeater might be cute, but if your
interest is in *communicating* your station ID, use the International
Phonetic Alphabet. It's helped me more than once on SSB with foreign hams
who don't always know that "Phone Calls" is PC and not FK.

I'm going to try that. Hopefully before the repeater leaves the shack
here, but that sounds like the way to go.

>The dual rate squelch is nice, but I do my machine a different way.

That's the way the club machine does it. The remote RX sites are both
100% PL due to noisy sites or frequent band openings, but the main site
is a ORed setup so anyone can get in. In theory, people know to tell a
newcomer to turn their PL on, but it doesn't always work that way.

>This is a good idea, but on my machine I've found that the machine

>>Making sure that the transmit encoder is running continuously (not
>>keyed) will also speed up the decode.

Except in a lot of cases, you want to use the area's standard PL freq,
100HZ in my case. If it was a private repeater or a low profile machine,
I wouldn't worry about it. Any solution really has to be at the
repeater. Too many different people with too many different radios using
the machine. Besides, I'm just trying to improve something that's always
bothered me a little. Probably no one else notices or cares!!

>>What I have a bit of trouble understanding is why hams go to so much

>talk or sound like some sound effects machine that's escaped from a
>bad SF movie (Can you say ACC?). But a gentle beep is better than a
>loud crash as far as I'm concerned.

But how would you know what site you came in on??? :-) Besides there's
quite a few people who I think barely even notice the courtsey tone. The
people who quick-key and can't help themselves!

Maybe once the repeater is back on the air, I'll play with PL decoders a
bit and see if I can't come up with a good compromise between response
time and falsing.

I wrote a review of the renewals for the colo QRP club newsletter. Unfortunately, I can't find the file in my directory right now, but here's the basic gist of the article:

1. They have very poor charge capacity when used in a high-current application. Don't exceed about 300 mA. Example, with D cells and a 3 amp load, I got only a few minutes of charge life.

(that's the most important point that Ray O Vac fails to mention in the ads but does describe in some detail in their documentation)

From: rhihn@scott.skidmore.edu
Message-ID: <1994Dec28.155442.21315@scott.skidmore.edu>
Source record: 254261

I heard someone say over the radio the other day that there is a 1-800 number one can call via modem to find out one's callsign before it arrives in the mail, and that once it is known it is legal to start broadcasting, even though the license isn't in hand.

Does anyone know of such a number, and is broadcasting under the above conditions legal? E-mail preferred (rhihn@bart.skidmore.edu), or post.

Thanks!

I need your ideas.

How do we get the FCC involved in cases where there is intentional jamming on the Ham bands. Especially on 40, 80 and 160 meters. There are times when the QRM goes on for hours, night after night on some of the nets.

This is true under weak signal conditions, but in the bedlam of field day where signals are strong, I've found that cute call signs help. I still remember talking to a station "Peter Rabbit" which was very easy to pull out of the standard phonetics.

>Thanks.

I have been using Log for Windows ever since it has been around. Recently upgraded to V2. I think it has the easiest interface and is the best WAS and DXCC award tracking program around. Nice report generator and it interfaces to the Packetcluster. Just click on a spot in the packet window, it qsy's the HF radio, and automatically turns my computer controlled rotator to the proper beam heading based on the spotted callsign.

Since it has an interface to the GO DX Manager's list, I can directly print out the DX managers address, or if he is in Buckmaster, directly print out the DX address. Then all I do is print out the QSO label. Put the label on my card, put the DX address label on the envelope and done.

It also can speak the DX call and frequency so I can hear if anything good is on while Im out of the shack. Those can be filtered so only things I NEED are spoken. While I am in the shack, I turn off the sound though.

Nice package.

Bob

## 5003. Call the FCC for "New" call sign!

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-28 18:41:10 UTC
From: mrlink@nickel.ucs.indiana.edu
Message-ID: <3dsbg6$pll@usenet.ucs.indiana.edu>
Source record: 254263

I just talked to the ARRL today and found the phone number to call the
FCC to find out your "New" call sign.
Here goes:
1-800-322-1117

They suggested that you wait about 3 weeks from the time you passed
your test until the time you call.

Hope this helps!

-Matt
(waiting on ticket!)

# 5004. Tracking transmitter with a 20-30 mile range needed

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-28 18:49:09 UTC
From: "P. Garrison" <peg@phoenix.net>
Message-ID: <3dsbv5$ng@griffin.phoenix.net>
Source record: 254212
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc

I have an immediate need for a transmitter that can broadcast up to
30 miles that is simple in design, few components and compact design.
A single board computer will send a couple of bytes of information thru
this transmitter. The target landscape that the transmitter will
have to transmit thru is a flat city landscape with few high buildings.

The two applications I have planned is a vehicular tracking transmission
and a weather information beacon that is stationary on ground some
30 miles from my home.

Please help me with this project! Thanks!!!!

Paul Garrison at
peg@phoenix.net

## 5005. DSPs

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-28 19:14:52 UTC

# 5006. Packet White Pages

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-28 19:15:59 UTC
From: rwiley@magnus.acs.ohio-state.edu
Message-ID: <rwiley.3.2F01B96F@magnus.acs.ohio-state.edu>
Source record: 254183

I was wondering if there was a packet White Pages Server out there somewhere on packet or through the Internet. I'm trying to location a packet address of someone else. It seems my wife started a packet qso with Kim, N8NZS, and lost her packet address. Thanks in advance for any information.

Thx and 73 de Bob, N8MMR

# 5007. Re: Help wanted: Power connection standards using Molex connectors

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-28 19:19:28 UTC
From: edh@hpuerca.atl.hp.com
Message-ID: <edh.788642085@hpuerca>
Source record: 254264

In <3daq0o$gf2@news.tamu.edu> furuta@cs.tamu.edu (Richard Furuta) writes:

>A few years back there was a bit of discussion about using "Molex" style
>connectors as the basis for making power connections to 12V sources. Can
>someone please remind me what standard was eventually decided upon and/or point
>me to a published reference? I seem to remember it made it into QST but have
>not been able to find it in a search of the past few years' indices. Thanks.

> --Rick
> KE3IV
> furuta@cs.tamu.edu

Here's what I collected on this topic (and use BTW)
Cheers, Ed N5RCK HP Atlanta
Recommended Power Connectors
Ed Humphries, N5RCK

Collected from r.r.a.m:

Comments from AL N1AL:
Awhile back, there was a string devoted to the pro's and con's
of using Anderson PowerPole (TM) connectors as a "standard" connector
for the 12 V power input of amateur VHF FM transceivers. It was
stated that this connector had been selected as the recommended
standard by RACES in California and elsewhere. I talked to our
local RACES Radio Officer, and he had never heard of it. In fact,
he was opposed to the idea on the grounds that this is an
"oddball" connector not easily available to the average ham.

The "ARRL Field Forum" published the following:

"As a result of a study commissioned by the League's Volunteer
Resources Committee last year, the Field Services department is
recommending the MOLEX Series 1545 connector for use in
promoting compatibility and interchangeability among personal
VHF/UHF radio equipment at disaster and public event sites.
Polarity should always be verified prior to connecting radios
and power supplies."

[Drawing of two 2-conductor connectors. The "pointy" end is
the + connector, the flat end is the - connector. The male
plug with female pins goes to the power source. The female
plug with male pins goes to the rig.]

[N5RCK notes on the connector: the above description may not
make it clear - the "male" plug has the smaller outside
dimensions and hence is designed to plug "into" the "female"

connector. The male plug has enclosed female pins (hence is very hard to touch or short the pins) and is to be connected to the power supply side (source). The female plug has open male pins (hence accessible) and is to be connected to the equipment side (sink). The plugs have a flat (squared off) end which should be used for the - (gnd/minus) wire. The other end of the plug is "pointy", a roof shape end which should be used for the + (positive/hot) wire. If everyone wires their connectors properly, there should be no problems with source/sink confusion and polarity will be correctly observed.]

"The 1545 connector is rated at 25 volts, 8 amps. Wire size requirement is #18 AWG or greater. An in-line fuse between the power source and the first connector is recommended. The connector is available at Radio Shack stores, part #274-222."

[N5RCK note: 1993 catalogs show 12 amps - this may mean the connector has been further qualified, or it may reflect a vendor update. Anyone with good _current_ references?]

Sounds like just the thing. I have noticed that many hams are using this connector already.

Now to my (N5RCK) notes:
Some Questions that were emailed to me and my answers:
> Thanks for your comments on the current power connectors debate -
> I've now been able to locate the parts.
>
In addition to the Radio Shack package, I've bought the various pieces from bulk bins at large electronic supply stores. If you are not sure what you're looking for, I'd suggest you buy a set from the 'Shack, and take the parts with you for comparison. Molex makes identical looking parts in sizes just smaller and larger than the R.S. #274-222. Don't get the wrong size or you lose the compatablity.

> However, I can't see anything about them that particularly
> recommends them to me - are they only popular because a number
> of people already use them (and Tandy/RS is found in most towns),

Yes and yes (i.e. ready availability is a plus, and lot's of people already use them thanks to earlier RACES/ARES standardization efforts).

> or is there some feature that's particularly good ?
>
As long as you follow a "standard" connection scheme (i.e. red + wire always goes on top "pointed" end, black - (common) wire always goes on bottom "flat" end, the "female" side with exposed male pins goes to the sink (the radio), and the "male" side with enclosed female jacks goes to the source (the battery/

power supply)), then:

a)You can't connect source to source (which would be dangerous)
b)You can't connect sink to sink (which is not useful anyway)
c)You can't cross-connect polarity (which would damage something)
d)You can't accidentally touch a "hot" wire (source plugs enclosed)
e)The connection does not rely on color codes (easily mistaken)
f)The connection is easy to make without awkward actions
g)You _can_ share radios and power sources easily in time of
emergency (I list this because if the "standard" isn't widely
and easily deployed, it doesn't matter if it is technically
superior)
h)You can easily make jumpers to go to OEM unique connection
points (allows you to use multiple sink/source combinations
without purchase of over-priced OEM parts)
There must be others I missed :-)

> It seems that others don't share my need to have a panel-mount
> variant : is this the case ?
>
As such, you're right. Heathkit used to use various panel/box
mounted connectors and you had a dickens of a time adapting to
them. Later, I noted when I got my HW-9 they saw the light:
instead of taking up interior real-estate, they ran the power
wires out a grommeted hole and used (have you guessed already)
Molex 1545 connectors. Perhaps you could adapt the same principle.
Or do as I did with my hf rig (has a funny panel mount that they
supply a pre-wired connector for): I cut the wire about four inches
out (to give me something to hold) and installed Molex connector.

Remember, this "standard" is primarily for emergency communications
use. There are certainly applications where something else is more
appropriate. And if someone _really_ doesn't want to cut off existing
OEM connectors to install Molex, all they need to do is build an
adapter cable so they could use someone elses power supply or someone
else could use their radio. For H/T connection to external power sources,
it's not much of an issue since you've got to rig _something_ in any
case! Same for gell cells, etc. - you've got to build a wire harness
and make some kind of interconnection. Enter the Molex 1545!

And (BTW) you _can_ cut a properly sized rectangular hole, fold
back the "ears" on the 1545, and snap it into the panel. It goes
without saying that this is only useful on the sink (equipment)!

Hopes this helps! Cheers and 73 -

David. I use a JPS NIR-10 DSP filter and it is a GREAT addition to a hamshack.
have a Kenwood T-930 which is a more than adequate reciever, But the DSP still
improves things. I copy a lot of SSTV and FAX and it definetely improves the
pictures...
hope this helps..... Bob K3BHZ, 73's

DJ>The ARRL Handbook describes a keyer kit (CMOS II, I think) with some
parts available from Idiom Press in Deerfield, IL. Does anyone have
a phone number for this company? If you do, would appreciate an
offline reply.

'Fraid I can't help you with a phone number, but here's what I do have:

(from September 1994 QST, p. 210)

IDIOM Press
Box 1025
Geyserville CA 95441

"The Super CMOS Keyer II partial kti, described in November
1990 QST, and the 1992 and later Radio Amateur's Handbook,
(Page 29-6), remains available at $48 for U.S. amateurs and
$50 for DX Addresses, post pd. CCheck or M.O. OK, no credit
cards."

# 5013. Giving your email with your call?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-28 20:43:13 UTC
From: michael.ayotte@netcom.com
Message-ID: <michael.ayotte-2812941243130001@rsg-av.com>
Source record: 254265

I am a SWL/Scanner listener and a Amatuer wannabe.

Before I spend some money of equipment I decided to start listening to the experts on the ham bands. I have been learning alot, but I am not able to ask questions (not already having a rig). I was listening to two hams (I believe they were KN6BI and KB6HLR) talk on 2m (146.7600) yesterday and heard them mention they were connected to the net. At least on of them used the same provider I do. But they never gave their email so I could write them.

To make a long story longer, I was wondering if you all think it would be a good idea to give your email (if you have one) with your call sign??

Comments welcome, thanks in advance.

[[ EXAMNT12.23 : 4125 in EXAMNT12.23 ]]

* Effective - December 20, 1994, prospective licensees and upgraders can call the FCC at 1-800-322-1117 to learn whether or not their pending FCC Form 610 license application has been processed, and if a new license has been granted. If a new license has been granted, the person can begin immediate on-the-air operation (using their FCC-issued call sign) with the privileges of the new license as indicated by the FCC (during the telephone inquiry). The hardcopy (printed) license would follow shortly after the license grant is indicated in the FCC Amateur Service data base.

* News Flash * Effective December 1, 1994, FCC began accepting Form 610 data electronically from the ARRL, W5YI and Sunnyvale VECs. Four more VECs should also be doing so shortly.

If your test was coordinated through the ARRL/VEC, license turnaround time will be approximately 23-26 days. This includes 5 days between the VE team and the VEC; 1-2 days at the VEC (in some cases the same day); and 16-19 days at the FCC.

AMATEUR RADIO EXAMINATION OPPORTUNITIES

**********

Special Note: Amateur Radio licenses usually arrive between 8 and 10 weeks after the test session. The FCC recently has been taking just under 4 weeks to issue a license after the application (or application data) arrives at the FCC.

The FCC considers their processing time to be 90 days--from the date they receive the application. The FCC usually receives the application one to two weeks after the test session (once the VE Team and the coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a Morse code test) will effective 6/8/94 receive a new license from the FCC that reads "TECH PLUS." Such upgrades before that date would not receive a new license but would need to retain the existing Technician license plus the CSCE conveying the Morse

code test credit as the only documentation issued for use of
the additional HF privileges.

**********

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact
the ARRL Educational Activities Department (EAD) at 203-666-
1541 x219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

# 5016. Re: Price Police

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-28 21:05:00 UTC
From: brian.carling@acenet.com
Message-ID: <2a6.2966.545@acenet.com>
Source record: 254258

Newsgroups: rec.radio.scanner,rec.radio.amateur.misc
From: brian.carling@acenet.com

Marc B. Grant writes (again!):

MBG>I've changed my tune on one item - IMHO, it's alright for the person
MBG>complaining about the price to post an email and newsgroup message - but
MBG>for crying out loud, do so in good taste! It IS a good method for those
MBG>unaware of pricing to see the general flow of things and determine for
MBG>themselves if the item is overpriced.

Marc is getting ridiculous here! What he is attempting to do is to
POLICE the "price police" which is what he called anyone who
yells "foul!" when people try to charge 10-50% above list for their
used amateur radio equipment to the unsuspecting neophyte.
Please drop the insipid drivel!

MBG>Don't get me wrong - I'm not for ripping anyone off

Tisk, and WE thought you WERE for ripping them off!
Of course we didn't Marc!

MBG>If this discussion turns a light on in one person, then I've accomplished
MBG>what I was after - raising the consciousness of sellers AND buyers on the
MBG>net concerning pricing, courtesy, and common sense.

You didn't exactly display any courtesy to the "price police" in your
last two messages. you seem to be lecturing anyone who complains
about price gouging. Sorry if I seem obnoxious about this, but I had
hoped that you would drop it after the third set of replies and counter
replies, but it seems like now you are just rehashing the same comment
over and over, and it has become redundant. Why not let it die out and
get back to radio? Try alt.philosophy.ethics as a place to continue your
thread. No hard feelings here.

The thing to say is "Excelsior, you fathead!", to which the proper response is: "Seltzer bottle, you slob!" as any Shep officianado will tell you.

I went to a book signing ("Wanda Hickey's Night of Golden Memories") back in my younger years, and I was so in awe, I almost couldn't speak.

One of these days, I'm gonna' pick up a Red Ryder BB Gun (with the compass in the stock).

Flick Lives!

yeah, it would probably work if

a) he knew how callsigns work, i.e. he doesn't start calling himself
thx-1138

b) he doesn't talk to anyone.

i'm fairly certian he'd never get caught if he just talked to a very few people
and never met them, but if he plans to get active in radio, and starts meeting
people he's been talking to, he'll get caught. and some hams you can plainly
see are so onery that they can't stand people who don't like ham enough to
bother to learn morse code, imagine what they'd do to someoen who didn't even
pass the no code test! they'd be outside his house with flaming buckets of
solder flux.

> Sean Walsh (walshs@gate.net) wants to know:
> : a cellular phone or a 2-meter mobile radio? For starters, let's get the

my little sister was just home from xmas .. she's an investigator for a
cellular phone company and this conversation came up over the dinner table ...
she tells me horror stories about cellular phones ... apparantly there are
people in major cities who professionally steal cellular services. cellular
phones have a number and a secret "pin" and anyone who knows both of these
nubmers can use that telephone. there are devices which "catch" this
information and people operate them from street corners in major cities,
catching pins and numbers as fast as they can click a button.

there are distinct advantages to cellular though,

a) probably less people listening to you
b) it has a ringer
c) you can communicate with non hams

if price was no object, i'd take the phone, but they're absurdly expensive.

# 5022. REPEATERS.....and their MAKERS

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-28 23:58:46 UTC
From: wrich@whale.st.usm.edu
Message-ID: <3dsu3m$ibn@server.st.usm.edu>
Source record: 254271

This is a general gripe that I will probably get flamed for but what the hell. I purchased a repeater from a guy named Matt Bush ( KA9IRX ). This repeater purchase was supposed to be be one that I would be happy with and ready to run as is. BUT.... After putting up with his rude comments on the phone and having to endure several months worth of problems I would like to say this guy is an IDIOT. To give you an idea this guy mounted the repeater controller to the reciever with no shielding, which is less than one inch from the transmitter. Not only that but when we opened the box and saw the Motorola MICOR repeater MOBILE radio, we were not the least bit happy with Mr. Bush. Anyone with any bit of sense will either not purchase one of these pieces of shit or will they will be in for lots of headaches. Matt Bush is an IDIOT!!!!!!

Any time you have an antenna that "works great!" I would not mess with it.
You can't ask for more.

You will be able to improve performance on any given frequency by going to a
resonant antenna (dipole, beam, etc.)

For general listening over a wide range of frequencies it will be hard to
find an antenna that makes a significant imporvement over what you have.

> on a second note. anyone have any experience with those decoder cards.
>you know the things that let you receive and decode fax transmissions, as
>well as other types of transmissions like RTTY. ??? i am thinking of
>getting one. JOHN

I have used AEA's FAX III module. It works great. The weather FAX pictures
you get are stunning. After you add color they are even better.

Let me know if you need more information.

Bill

Not the same as elt's or epirbs. It's (I think) the Rocco system or
something like it - or maybe they are using the elt/epirbs, just illegally.

Having been on "bastard searches" for things like this, I can really sympathize with
control freaks who want to outlaw everything.

# 5028. Repeater questions in KY/OH area.

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-29 04:16:48 UTC
From: WALLY@ukcc.uky.edu
Message-ID: <1709A14760S86.WALLY@ukcc.uky.edu>
Source record: 254219

I have just gotten into ham radio, will be getting my ticket in Feburary I hope, and have already gotten a DJ-580 and begun really listening to the amateur bands. I am curious about repeater networks..

I know a simple repeater has an input frequency and the output frequency, or the frequency 'shift'.. But how do large networks of repeaters work? Such as the one linking lower Tennessee to upper Ohio in the Kentucky/Ohio area.. Are there some repeaters dedicated to the above repeater setup, you can input into it and such.. And then some repeaters dedicated to listening to other repeaters and doing what they do best... repeating it.. :) So some are for input to the system, some just for expanding the range?

It's just facinating how everyone sounds a block away, but could be talking to each other from pretty distant areas.

If anyone has repeater information for the Kentucky/Ohio area, such as repeaters input/outputs, fees, phone patches, etc., I'd greatly appreciate the information. Want to be all set when I get my ticket! :)

And anything else would be welcome as well..

Thanks..

The Jan 95 "The World of Ham Radio" CD-ROM is now available from AmSoft.
This CD-ROM offers more ham programs than any of the others out there!
Over 20,000 IBM files for amateur radio are included on the CD-ROM.
Includes FCC CALLSIGN callbook with US & Foeriegn listings current to
12/94, and AMCALL the new logbook from AmSoft that will auto log from
the CD for you. Over 1,350 Radio Mods. The latest HST images available.
Over 700 Megabytes of Amateur Radio Software packed into 1 CD.

This CD-ROM is published every 4 months without delay in JAN MAY & SEP

If you would like to get a FREE newsletter about the January 1995 AmSoft
CD-ROM please leave me your E-mail information at: amsoft@epix.net

Hello all,

ALthough I admit I missed a few of the posts on this topic, let me throw in my 2 cents worth.

Can you operate ham radio from an airplane? Yes, except as stated in 97.11 of the Rules, which states that you cannot operate while the aircraft is flying under IFR rules. Since IFR is mandatory above 18,000 feet MSL, and since most airlines & commuters operate ALL THE TIME under IFR rules, the bottom line is that you pretty much can NOT operate on a commercial flight. Your buddy own a Cessna, and wants to take you along? Sure, you can operate, as long as he is not flying IFR, and as long as you have his permission.

Remember, the FAA only allows radio/electronic equipment to be operated or installed in aircraft if spcific FCC/FAA type acceptance has been granted for the equipment. This is one reason the AM Comm radios cost so darned much.

Cell phones are specifically prohibited by the FCC from operation in the air anytime.

"Squawk One Two Zero Zero, frequency changed approved..."

>>In article <dcmartin.788106523@saturn.acs.oakland.edu> dcmartin@saturn.acs.oakland.edu (Douglas C. Martin) writes:

>>Well....I've read all the other posts. In response to your original question-

>>"What's the fastest/cleanest PL decoder?"

>>The Motorola "Vibra-sponder" beats all of the others. It is not "Hi-tech"...
>>It just works faster with few problems attributed to falsing.

The only problem we have with vibrasponder decoders is sensitivity. When your whole fleet of radios are 1970s vintage Moto. with 500+ hz PL deviation on TX (nominal 750hz) they work great (not to mention the reverse burst- that for some reason *ONLY* the folks at Radio Shack incorporate in their Amateur market radios).

But, some modern transceivers either a) come from factory set for 300-400 hz deviation or b) have a fixed-level deviation below 500hz. Either a) trip to the service monitor and a pot adjustment or b) S.O.L..
We have one repeater user with a Aerotron transceiver with fixed 500hz encoder- when he hits 4kc or more of voice modulation, the Motorola decoder shuts up.

Others with 500+ get smashed by the repeater when they hit 5kc (or more as some of the AMATEURS do).

Either a narrow band amplifier (50-300hz) before the Moto decoder, or tell all the repeater users to crank up their encode deviation - if you want reliability.

*Note- Com-Spec's Ts-32 seems to work well for us down to 200hz of transmit deviation on 12db SINAD signals into the Receiver, with full 5kc of modulation. A heck of a lot more reliable.

# 5035. GB2RS News 1st January 1995

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-29 09:20:50 UTC
From: dave@llondel.demon.co.uk
Message-ID: <788718050snx@llondel.demon.co.uk>
Source record: 254190
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning and a Happy New Year. It's Sunday the 1st of January and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Before the review of the second half of 1994, there are a few news items:

Firstly, some HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From the Cayman Islands, JH1ROJ is active as ZF2RO until Thursday the 5th of January on all bands 160 to 10m, SSB and CW.

From Belize, AE0Q will sign V31RYfrom now until Monday the 9th of January, taking in the ARRL Data Contest on the 7th and 8th of January.

We have no rally news for you this week as the next event notified to us is not until Sunday the 22nd of January.

Now for the HF contest news:

The ARRL Data Contest takes place from 1800 UTC on Saturday the 7th until 2359 UTC on Sunday the 8th, on all bands 80 to 10 metres, but excluding the WARC bands.

The RSGB Affiliated Societies Team Contest takes place next Sunday, the 8th of January, from 1400 to 1800 UTC. The rules can be found in the December edition of RadCom.

Next some VHF contest news:

The next RSGB VHF Contest is the 144MHz CW Single Operator, Fixed / All Others, from 1000 to 1600 UTC on Sunday the 15th. See January RadCom page 81 for further details.

GB2GP will be operating next weekend from Gilwell Park during the Scouts Winter Camp weekend, from Friday the 6th until Sunday the 8th. Operation will be on HF and VHF. Further details from G6OLK on 01256 843782.

And now for the second part of our traditional Review of the Year. We are grateful to newsreader Vic Kusin, GM4HCO, for researching and compiling it.

In July, congratulations were due to a couple of the youngest candidates ever to pass the RSGB 12WPM Morse test. The two, both girls, were successful at their first attempt at the test. Nine-year-old Jannelle lives in Portadown, Northern Ireland and is the daughter of GI0UJG.

Diane, who lives in Standon, Staffordshire is ten years old and her parents are G0UUM and G0UUN. Later in the year Katie Cannon passed her 5WPM Novice Morse test at the age of only seven, being one of the youngest people ever to have passed this test.

The Amateur Licences were amended by the Radiocommunications Agency in July - power restrictions on 1.81 to 1.85MHz and 50 to 51MHz were removed, allowing the full 26dBW to be used. The ERP and antenna height restrictions on the whole of the 50MHz band were also lifted. Holders of all amateur licences were required to notify their local RIS office of unattended digital operation and to agree suitable close-down procedures. Changes were also made to computer logging requirements.

On the 17th of July, Raynet member, Ron Oswald, G7PIP of Hastings, helped a yacht in distress to contact the coastguard. He heard a Mayday transmission from the yacht ''Aida'' which had lost its rudder. Dover coastguard was unable to hear the stricken craft so Ron proved to be their only lifeline, relaying messages via the telephone. He was eventually joined by a local coastguard and a helicopter was launched. The 'Aida' was observed until it arrived safely at Newhaven.

July saw the opening of the Bletchley Park Trust Museum by His Royal Highness, the Duke of Kent. The museum, located near Milton Keynes, commemorates the work of codebreakers and intelligence specialists who made a vital contribution to the allied war effort. Two groups of amateurs provided exhibits to show the role of radio operators during the war. Members of the Milton Keynes ARS created a working replica of a wartime Y service station, and a large exhibition of radio and radar equipment was created by with the help of radio amateurs from the Communications and Electronics Museum Trust.

At its meeting on the 23rd of July, the RSGB Council elected Clive Trotman, GW4YKL as President for 1995.

BBC Television's 'The Sky at Night' reported in August that amateur observations of the radio noise from Jupiter had shown a correlation between noise at 20.4MHz and the impact of fragments of comet Shoemaker-Levy 9. Dave Sumner, G3PVH, presented a paper on his own observations of Jupiter noise at the AMSAT-UK Colloquium at the end of July.

From the 20th to the 25th of September, a huge consumer electronics show, LIVE'94, was held at Earls Court in London, covering a wide range of activities including music, broadcasting, computers and photography. The RSGB co-ordinated an 'Amateur Radio Village' in conjunction with seven other companies. The aim was to introduce the hobby to as many people as possible and well over a hundred thousand visitors attended the event.

At the beginning of October, the RSGB International HF and Islands On the Air Convention was held near Windsor in Berkshire. A large number of top DXers from around the world attended and the event had something for

the beginner as well as the expert. There was a full programme of lectures, slide shows and discussion sessions and many special interest groups were represented. The special event station used the unusual call GB 301 OTA.

The IOTA honour roll showed a massive 43% increase in participation this year, with 509 stations listed. Many who have taken up island chasing say that IOTA is now a greater challenge than DXCC. The highest placed UK station was GM3ITN who was 7th equal with 743 islands confirmed. Six stations, had been awarded the IOTA Plaque of Excellence for contacting 750 of the 800 islands or island groups which have been activated.

The 1994 Young Amateur of the Year was seventeen-year -old Robert Aley, G7SRR, who was selected after interviews by the RSGB and the RA. Robert, who was first licensed as 2E1AXZ, enjoys participating in special event stations, construction, packet radio and designing his own QSL cards. He has been an RSGB Novice Instructor since September 1993 and has recruited several more instructors. In July he received his Full Licence. His examination fee was earned by writing questions for the Novice RAE, which were accepted by the City and Guilds. A number of prizes donated by the RSGB, the RA and Industry were presented to Robert and to the runner-up Stephen Conner, GM0TET, at a ceremony held at the RSGB HF Convention.

The 37th Jamboree on the Air took place over the weekend of 15 and 16 October. Over 250 Special Event Callsigns were issued for the year's largest amateur radio youth event. Scouts and Guides from all over the world combined with radio amateurs to experience the fun of the hobby at first hand by exchanging greetings messages with each other over the air.

The Science Museum announced that, due to a change of policy to produce more interactive exhibits, a decision has been made to close down the GB2SM station. As a result of a meeting between the RSGB General Manager and the Director of the Science Museum in October, the future of amateur radio at the museum was secured. The existing GB2SM exhibit closed on the 7th of November pending further discussions.

The RA announced that the minimum age limit on the Full Amateur Radio Licence had been reduced, thus removing the anomaly whereby young people who had passed the RAE were unable to obtain a Full Licence until they reached the age of 14. Holders of the Amateur Radio Novice Licence who are between the ages of 10 and 14 years will now have the opportunity to obtain a full Amateur Radio Licence, provided they have held an Amateur Radio Novice Licence for at least one year and have passed the RAE.

During mid October, a major tropo opening affected all bands from two metres up to the microwave bands. For much of the week the bands were open right across Europe. Signal levels were the strongest that many people could remember, and even UHF broadcast Television was seriously affected. The lift conditions which covered much of the UK, and extending into Central Europe, enabled many operators to experience

really good propagation for the first time. At its peak many Novices and others were able to work into the Netherlands, Belgium and Germany using QRP. On UHF many contacts in excess of 400km were made, with a possible new UK record on 10GHz of 1137km, made jointly by G3FYX and G3JMY in Bristol and SM6ESG in Sweden.

The RSGB was represented at the launch of the Radiocommunications Agency's Annual Report on 1 November. During the press conference, RA officials spoke of the huge increase in demand for radio services but the Society was assured that the Government believed in a balance of types of radio service, so this was not a direct threat to the amateur bands. Note would, however, be taken of the parts of the spectrum which were under-used.

The RA's Report revealed a six per cent increase in the number of amateur radio licences in force. The total was 63,033 which put amateurs at the top of the list. Ships' radio licences were second with nearly 58,000 and CBs third with 51,000. Of the amateur licences issued, 50.5% were full class A, 47% class B, and the remaining 2.5% were Novice licences A and B.

The Radiocommunications Agency announced that the contract to distribute Amateur Radio licences should, once again, be awarded to Subscription Services Limited, initially for a three year period. All licence holders were sent a letter with details of the new arrangements.

The Annual Meeting of the RSGB took place at the Royal Society of Chemistry, London on the 3rd of December. The results of the Council election and a full list of the 1995 RSGB Council is published in the January edition of Radio Communication which was due to be posted before Christmas. At an Extraordinary General Meeting called by Council to make a number of amendments to the Society's Articles of Association, all six special resolutions were carried overwhelmingly.

The Radiocommunications Agency announced in December that, in certain cases, they may publish details of those whose amateur licences had been revoked. Until now this information has been regarded as confidential, but the decision to publish would be based on the consideration that it is important to make others aware of the revocation of a licence and the ensuing ban on radio use for the person concerned.

Estonia, Israel and Turkey have signed the CEPT TR 61-01 agreement this year, which permits temporary amateur operation in those countries without additional paperwork. There are now 27 countries who have implemented this recommendation - the full list is given in your Licence Validation Document.

And that concludes our review of the year 1994, as reported by GB2RS.

And now the solar propagation review of the year 1994 and what's to come, written by our regular propagation news contributor Charlie Newton, G2FKZ:

The major propagation story this year was the massive sporadic E openings during the summer, particularly on the 50MHz band. These covered the whole of Europe, the Middle East, North Africa, Iceland, Newfoundland, Canada, the USA, the Caribbean, French Guiana, and much more. The 2m band opening on the 23rd of June to Portugal was one of the best that most people can remember. It is well-known that sporadic E is more prevalent during the sun spot minimum, but this year it surpassed all our expectations. Next year is expected to be even better.

UK amateurs have taken part in the ITU Beacon Project. The reported results from the LN2A beacon, covering 5.4 to 20.9MHz, showed significant results, with considerable variations from Scotland to Cornwall. There is little doubt that we will gain as much out of this survey as the ITU.

The burning question is "When will the minimum be?" Well, all the expert forecasters burnt their fingers very badly over the maximum, so they have been very quiet about the minimum. My own forecast is that the first positive sign of the minimum will be when the first bipolar spots appear at high solar latitudes with reversed magnetic polarity. Up to now this has not happened. Some extremely small spots have appeared but not a bipolar one. When this happens the minimum will be about one year away,. To sum up, it looks as though next year will not see the minimum. Some time during 1996 is the best bet that I can give you. The solar flux is also a good guide. Previous minima have been around 68 units; and so far we are well above this with monthly averages about 80 units. This indicates that the flux minimum is at least a year away.

The troposphere has given us a lot to think about. For over a year, tests have been carried out on the 50 MHz band over the 350 kilometre path between G4UPS in Devon and G3CCH in Humberside. These have shown that at 0800 hours each day CW QSOs can take place with 96 percent reliability, giving RST levels around 579. In order to see results at other times, a 24-hour licence has been applied for.

The weekly solar data preliminary report and forecast, which we receive from SESC Boulder by airmail, passed its 1,000th issue on the 1st of November. The USA Finance Committee authorised us to have this free, for which we were duly thankful as it is our best source of data. RSGB Propagation Studies Committee member Neil Clarke, G0CAS, is now supplying solar geophysical and ionospheric data to the packet network daily on the TO field under SUN.

The electron fluence levels have been very high for most of the year which is to be expected near sunspot minimum. This has affected many satellites due to electron static charging, both GOES 6 and 7 have been seriously affected.

The beacon networks have proved their worth by showing up openings when people thought the bands were dead. To encourage short wave listeners, the Italian national society ARI is issuing a new award for reception reports. Details can be found in the December edition of RadCom on page 31. The British 28MHz beacon GB3RAL moved to a new site at DRAL Didcot,

resulting in good overseas reports. The German national society DARC launched an experimental propagation beacon on 3.558MHz to fill in zones where DK0WCY on 10.144MHz is not well received. The 10MHz transmissions are continuous giving every 5 minutes warnings of solar and magnetic data, updated every day. The 3.5MHz transmission runs from 0700 to 0800 and 1530 to 1700 UTC. DARC has applied for authority to continue this service throughout 1995.

1995 is expected to see the start of a state-of-the-art world-wide beacon network, with stations sharing a common frequency. Time sharing on the 14,18,21,24, and 28MHz bands will involve brief transmissions synchronised by satellite. Our own proposed propagation broadcast transmitter, GAM1, is still waiting for licence clearance from ITU Geneva.

And that's the end of the solar propagation review of the year 1994.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

>Not the same as elt's or epirbs. It's (I think) the Rocco system or
>something like it - or maybe they are using the elt/epirbs, just illegally.

Nope! They are simply a slightly modified version of the transmitters biologists hang on wild animals so they can track them for research purposes. (Actually they are like the early versions of those transmitters. The ones bioligists use now don't just tell them where the critter is, they transmit a lot of information like pulse rate, body temperature etc.) The modification consists of making them much more reliable with better batteries and hermeticity, plus an on/off switch. The idea is that climbers rent these and if they get into trouble they turn them on. Then searchers get out a direction finding antenna and just go get them. It worked extremely well in the only case I'm aware of when the lost person had one. The trouble is that the people who get lost seem to be a different group from the people who rent these (they are not available for private purchase).

This is not like the aviation ELT system which is monitored. Nobody listens for these things until notification comes through normal channels that a person is overdue. Only then does the sheriff call out SAR people and if the subject has rented one we get out the DF equipment and go get the person. There really is no search in this case, you just follow the signal and go right to the transmitter. (Yes, I'm in a SAR unit which covers Mt. Hood and we train with these.)

And by the way, these are quite legal. Really the biggest legal obstacle was that Oregon law had to be changed to give the manufacturer some protection against lawsuits before they dared allow these to be used for life saving. (A sad commentary on our legal system.)

# 5038. DRAKE REPAIR

Newsgroup: rec.radio.amateur.misc

Re: We need a better repeater

Kevin,

There has been some very strong inversion with this year's odd weather. The clear nights have permitted a cool upper atmosphere while the great lakes have kept us warm near the ground. I read an article in the paper that reported that the temperature inversion around Chicago has been responsible for widespread triggering of home CO monitors due to a slight rise in trapped CO. I have heard stations from Michigan and much of Ontario with my HT. I'm sure all will be back to normal when our usual winter weather returns! But you never know when a green Christmas will happen again.

Best of luck

Bill W2CJ

# 5040. Are single-chip ICs for RF Xmitter/Reveiver available?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-29 15:52:46 UTC

: the Avantek MMIC's have the dot or dimple on the output lead where
: Minicircuits might be on the input lead.

I've never seen this--a case where the Mini-circuits version was
different from the Hewlett Packard/Avantek version.

The convention is to cut the input lead at an angle so it looks
different from the other leads (devices in the 85 case, called
MAR devices by Mini-Circuits) There is also a color dot that
indicates the device type. I've always seen it placed next to
the input lead, but have never seen manufacturer documentation
that that says this is a valid indicator.

There is a bump on the case indicating the output lead for
the 04 case, called MAV devices by Mini-Circuits. These
are bigger cases, about 0.2 inches in diameter. The type
06 devices don't seem to be available in this bigger package.

# 5042. ARRL EMI Seminar

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-29 17:28:08 UTC
From: ehare@arrl.org
Message-ID: <1994Dec29.172808.3642@arrl.org>
Source record: 254189
Cross-posted to: rec.radio.amateur.misc,sci.electronics

The ARRL Educational Activities Department is sponsoring an EMI Workshop Educational Forum, to be held at the Miami Tropical Hamboree on Friday, February 3, 1995.

This workshop, designed to help radio operators, their neighbors and others, immerses you in solutions to radio-frequency interference problems. The course will be conducted by ARRL Laboratory Supervisor Ed Hare, KA1CV. Ed shares his years of EMI experience, adding practical facts from the ARRL's book, RADIO FREQUENCY INTERFERENCE--HOW TO FIND IT AND FIX IT. The course covers technical basics plus interpersonal skills for radio operators and neighbors who each see a different view of the problem. The course doesn't use complex math, and isn't designed for electrical engineers. Ed discusses regulations--radio, power-line, cable and telephone--explaining individual responsibilities. He presents off-the-shelf, practical solutions to cure most EMI problems, describes EMC publications and answers YOUR questions. ("Stump the Speaker", Ed's public-speaking trademark!)

*** Electromagnetic Compatibility (EMC) Fundamentals
*** EMC Regulations
*** Personal Aspects of EMI Problems
*** Sources of Help
*** EMC Publications for the Radio Operator
*** Solutions for:
o Audio o Automotive o Transmitters
o Computer o Television o IMD & Repeaters
o Telephone o Power Lines o More!

It takes place on Friday, February 3, 1995 - after lunch at 12 to 6 PM. Please arrive early to register and get materials at the Miami Tropical Hamboree, Miami Airport Marriott -- 305-649-5000. Nearby hotel: Holiday Inn LeJeune Center -- 800-428-9582.) Ask for Tropical Hamboree rates.

Space is limited, so please pre-register by contacting Rosalie White, WA1STO, at ARRL HQ (203-666-1541) (rwhite@arrl.org) before January 25.

You'll receive free materials and six hours of practical information. Cost is $20 for ARRL members, $25 for non-members. Order RADIO FREQUENCY INTERFERENCE--HOW TO FIND IT AND FIX IT, in advance (call 1-800-326-3942) for $15 plus shipping, or pick it up at the workshop.

For those who take part in all 6 hours, you'll receive a
certificate for 0.6 Continuing Education Units.

Sponsored by: ARRL Educational Activities Department***

Also note that some airlines now ban the use of electronic games as well. The problem here is the same as most of us hams have experienced with our home computers - the square wave clock and actions of the digital circuitry generate a wide spectrum of noise. You should avoid using any device on an aircraft that exibits this characteristic. Over the holidays I traveled with one of the prominant air carriers and noticed that the safety guide in the seat back pockets indicated that the use of portable electronic games, radio telephones, broadcast radio receivers, portable CD players (the drawing was 'iffy' on this one) were all banned along with smoking, lighters (open flame), etc.

I personally welcome this ban on electronic games after an agonising hour long flight seated in front of a person who played this game having very annoying and repetitive music which disappeared every time I turned around to complain.

The only piece of electronic equipment I would want to use on an airplane would be my laptop. I know this thing emits a myriad of RF noise, but the airlines have not banned its use - at least yet. Still, I resist using it.

# 5045. DX Grid Hunting

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-29 19:30:05 UTC
From: CUNNINGHAM_A@whqvax.picker.com
Message-ID: <1994Dec29.193005.7962@picker.com>
Source record: 254194

---

The DX Grid Hunting Program

---

DX Grid Hunters work stations in as many Maidenhead gridsquares as possible. Achievement is measured by multiplying the number of major grids worked by the number of minor grids contacted. There are 324 possible major (10 x 20 degree) and 32,400 minor (1 x 2 degree) gridsquares. Some are only accessible by working maritime mobile stations. Your major grid tally is a good measure of global DX coverage and can be thought of as the "multiplier" in your score. Your minor grid tally indicates DX comprehensiveness. This "major times minor" grid formula encourages DX Grid Hunters to work stations in all areas of the world.

DX Grid Hunting has many novel aspects:

* A QSO with a DXpedition ship, en-route to an island, for instance, may net you a rare gridsquare QSO.

* An average DXer in a populated area might be within reasonable traveling distance of a fairly rare minor grid. This suggests Grid Hunter DXpeditions, similar to rover class operation in VHF/UHF contests.

* In DX Grid Hunting, changes in the sovereign boundaries of countries are irrelevant. Gridsquares never change. For example, whether P5RS7 was actually in North Korea or Russia, it was still in the same grid square.

* Each DX Grid Hunter determines what "counts" as a valid QSO and/or QSL. He tracks his own progress. There are no awards or organizations involved.

* There are "contest style" DX Grid Hunter activity weekends in late March, June, September, and December.

---

Join the DX Grid Hunt

---

1. Use the Maidenhead grid squares for identification in Grid Hunt QSOs. Put your grid on QSL cards.

e.g. DJ0XX DE K8EXP - R FB - UR 579 - OP DAVE - QTH
CLEVELAND EN92 - HW CPY ? BK

2. There are no paper awards. No organization administers
anything. Measure your own progress by tracking the number
of minor and major grids worked and/or QSLd. For your score,
multiply your major grid tally by your minor grid tally.

e.g. A DX Grid Hunter who worked 497 minor grids
and 151 major grids has achieved a score
of 75,047 points.

3. DX Grid Hunt in in non-crowded band areas.
Suggested DX Grid Hunter operating frequencies:

CW: 1820, 3550, 7050, 14050, 18080, 21050, 24900, 28050 KHz.

SSB: 1870, 3850, 7200, 14250, 18150, 21300, 24950, 28400 KHz.

Novice: 3725, 7060, 21150, 28125, 28400 Khz.

On CW call: " CQG "

On voice call: " CQ GRID "

4. You, the DXer, determine "what counts" and "what doesn't count",
based on your honor and good judgement.

5. Encourage software developers and publishers to create
DX Grid Hunt products. Some logging programs already
accomodate grid square tracking. Other software is in
development.

6. Get active during DX Grid Hunter days. These follow the
vernal / autumnal equinoxes in March and September, and
the summer / winter solstices in June and December.
The informal DX Grid Hunt contest is each year on the
weekend containing or preceding New Year's Day. Exchange
is gridsquares. Score is major grids multiplied by minor
grids worked.

7. This information is in the Public Domain. Please copy,
post, or distribute freely. Good DX Hunting and 73.

>usability in mountain/desert areas, and last but not least, cost. Anyone
>out there with an opinion on this subject?
I think 2m rig is definately better for camping - cellular covers not the
whole US and definately not the whole world. Speaking of emergencies - there
are different types of emergencies, if you have a flat tire - cellular should
be fine, but if you have a major disaster then I believe that ham radio is
much more resistant. Many hams have independent poewer and field day
experience. For a cell phone its basically enough to cut power, or destroy
the tower - and that's it. Purpose is important also - celluler's companies
target is profit, NOT emergency communications, ham radio has emergency
communications as one of it's goals.
For a wider area no doubt ham radio is better - combining 2m with HF you can
communicate practically from any part of the globe, not to mention US.
Another thing is that ham radio is much more grassroot and decentralised,
that means that its more reliable, though probably less effcient.
Speaking about the no-code licence - I believe any serious camper/hunter etc.
should get the license - if you can't do that then you might be at risk
moving into the wild :-)
Vassili,
N2WID.

>HT's start at around $125 and go up (like the guy really needs DTMF paging
>and 32253235 memories to call in an emergency.) As for HF, a servicable
OK - a friend of mine just asket me what I think about the new FT-51R.
I do not know... I've got a few Radio Shack HTX-202s and you get NEW one
every day from Merimac for $200, and with a little search for $150, and
once I got it for $125. It has any feature you can think off. If someone
can come up with any usefull feature on FT-51R - I'd appreciate. Dual band
is not a usefull thing for logistical/emergency communications really.
So - $185 does it for one person.
>used rig that would get you on HF can be had for $200-500 easily including
>antenna. There was a post just today for a Kenwoods TS-820 with vertical
>antenna for $350. That would get you on all the pre-WARC bands with a
It was a nice article in either QST or CQ this year about the Japaneese
made and sold handheld radio for 80/40m. Really nice thing, was doing about
5-8Watts and was reported to for just fine during the camping, and weight
was not much more then of a 2m HT (2 lbs?). Speaking of antenna for 80/40m -
you can carry it in the backpack - and it's just a 40m (120ft) piece of
wire and about the same length of rope and cable. For this freq. you can
use thin coax, and then you need no more then 15 minutes to set an inverted
vee or a dipole on the trees - then you can make anything starting with
300 miles and further. The fact of a matter is that in the real wilderness
there are NO cell phones.
On the phone companies, that charge $3.50 per minute for emergency
communications I find that pretty much immoral and disgusting... That would
be the reason why I would never add profits to cell companies, not only
they consume spectrum at others expence....
Vassili,
N2WID.

ARLD077 DX news

ZCZC AE75
QST de W1AW
DX Bulletin 77 ARLD077
From ARRL Headquarters
Newington CT December 29, 1994
To all radio amateurs

SB DX ARL ARLD077
ARLD077 DX news

The items in this week's bulletin are courtesy of Bob, W5KNE, QRZ DX, Chod, VP2ML, The DX Bulletin, Japan DX News, Edward, W9SI/OA4SS, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral Column from the pages of QST magazine. Thanks.

ANTARCTICA DXPEDITION. The VP8SGP operation is still a go. Departure from the Falkland Islands will be on December 31 with arrival on South Georgia Island expected to be January 4.

NEPAL AND BANGLADESH. Japan UNICEF Ham Club members were supposed to have been on the air from Nepal by now. There have been no PacketCluster spots for them on our local Connecticut node. Plans were for this group to move on to Bangladesh and operate from there during the first week of the new year. Keep an eye on the PacketCluster network.

PACIFIC DXPEDITION. Masa, JE1DXC, has worked around earlier flight reservation problems and his island hopping trip is now back on. Operations will be on 80 through 10 meters with CW, RTTY and SSB. January 19 and 20 he will operate as 3D2XC from Vanua Levu, IOTA OC-016. From January 21 to 26 he will sign T30XC from the Gilbert Islands, IOTA OC-017. Listen for T20XC on Tuvalu, IOTA 0C-015, from January 27 to February 2. February 3, 4 and 5 he will be back at Vanua Levu. QSL via JE1DXC.

VATICAN. Edward, W9SI/OA4SS, will be returning to Vatican City to work as an interpreter. His stay should be from early January through March 25. Though his work schedule will limit on the air activities, there will be some operating windows. They are Monday through Friday from 1400 to 1530 and 1930 to 2300z, Saturdays from 1400 to 1830 and 1930 to 2230z, and Sundays from 0800 to 1130, 1430 to 1830 and 1930 to 2230z. He also reports that the installation of

a satellite array is slated for January or February. QSL via I0DUD. Edward maintains schedules Monday through Friday with KD8WS on either 21435 kHz at 1740z or the IMRA Net on 14280 kHz.

EGYPT. Said, SU1SK, reports that IK8AUC is not QSL Manager for his station. Said has no QSL manager. QSL SU1SK via PO Box 62, Shobra Alkima, 13411 Cairo, Egypt.

SAINT LUCIA. W9KDX, KS9W, K9BG, N9JCL and WA9AKT will be on the island January 7 through 13. They will be on 80 through 10 meters with CW, SSB and RTTY. They also plan to operate in the ARRL RTTY Roundup on the 7th and 8th. Call signs are to be issued upon their arrival. QSL via N9NCX.

CAYMAN ISLANDS. Isao, JH1ROJ, should be on the air as ZF2RO from December 29 to January 5. Listen on 75 through 10 meters for his CW and SSB. QSL his home call.

BARBADOS. Chris, G3VBL, is active as 8P9EM until January 12. He favors CW on the WARC bands. QSL via G3VBL.

THIS WEEKEND ON THE RADIO. The ARRL Straight Key Night is actually a 24 hour operating event starting at 7 PM EST December 31. In this low pressure event make friends on CW using a straight key. When giving signal reports, use SKN instead of RST so as to attract others to participate. More information appears on page 132 of November QST.

Another point to remember is that if there *is* a natural disaster, as
soon as the newsies get there, the cell-fone links are going to be
*flooded*. In the last Calif. quake, civil defense-types couldn't access
the cellfone network at *all* 'cause (1) not enough of the towers had
emergency power supplies and (2) the newsies all just *had* to file their
stories and used the only telephone links they could access...the cellular
links.

Good afternoon everyone! I have really been getting a kick out of all the information that comes from this Info-Ham.

A question that I am looking for the answer is "What have you found as the best source to entering directly into Internet?" I am looking for the cheapest rate and the best working system. I would prefer a source with a 800 number or at least one that has numbers in most major cities.

I live in Louisiana and the closed major city to me would be Shreveport. I now just enough about Internet to be dangerous, HI HI. But I am wanting to learn more.

Any help that you can pass along will be most appreciated.

Also I am currently receive Internet mail via MCI Mail, due to the fact that I am not charged for any incoming files. Again, TNX to anyone that can shed some light on this subject for me.

DE Frank C. Morris, N5YZM...

Seems a little harsh. I don't know how you found out about Mr. Bush, but here is his ad (minus phone number) that I happened to see in QST's want ads:

REPEATERS: Motorola Micors; 440, 2m, 6m; controllers, autopatch, $400-$650, + s/h, Matt Bush, KA9RIX, XXX-XXX-XXXX, evenings.

Seems pretty straight forward to me. As far as being rude on the telephone, if your post is any example of the way you might talk to someone, it is no wonder that you get the same attitude right back at you.

You no doubt had some sort of return agreement if you were not satisfied with the goods you received?

73,
Ken

GM OM ES YL

Help..

I've been raking my brain (I can say that after swallowing two advils).
At the end I realize that I have no clue so I'm going to ask for help.

I have some spare cash and I was wondering if I should buy a TNC to hook it
up on my old and trusty Amiga 1000. However I think that my 2 meter
rig is far from ideal (aka.. an RS HTX202 HT) for packet. I also do not know
how much packet activity is done here in Central Jersey. Anyway:

What should I do with the HT if I want to go into packet? buy
an external antenna and a power supply and "pump up the volume"?

Can somebody actually do packet with an HT?

What TNC can I use with an HT and an Amiga using AmiCom?

An Utter Novice,

You didn't specify any price range but "a real good radio" is the
Drake R8. It's about a thousand bucks new. A real good antenna is
the Evesdropper or Sloper at about 80 bucks. If you can't get your
games with this combination you won't get them with anything. For a lot less
money (300 bucks or so) try the Sony 2010, Yachtboy 400, even a RS DX-390
for around 180 bucks. Same antenna works great. Call 1-800-558-0411
Amateur Electronics Supply in Milwaukee and ask for a catalog. Another
good source is Tucker Electronics at 1-800-527-4642. 73

>800 number or at least one that has numbers in most major cities.

Frank, I am using Delphi. It costs me 23 bucks a month for full internet
access with the first 20 hours per month included. After 20 hrs it is
$1.80 per hour. I call a local number at 9600 baud. There is no fancy
graphics user interface, just text, but I get full access. They also
have a large collection of their own files to download seperate from
the internet. There are local numbers in most cities to avoid long
distance rates. I believe the connection is made through sprintnet
or tymnet but it is transparent to the user so you don't even notice.
Pick up a copy of Internet World Magazine, it's loaded with providers.
Hope this helps. 73

# 5057. WANT schottky diodes

Anyone know where I can get some good quality Schottky diodes to replace the germaniums in my Kenwood TS 440 ? I got some locally, but they cannot handle the current or something, I blew them out fast. I replaced them with cheapie Radio Shack 1N42A's that handle the circuit fine. I figure I just need beefier diodes than I had gotten. Anyone know a source, or have suggestions?

Your best bet (although expensive) is to ditch the coax.
There is no way to get the moisture out of the coax. You can call a place like Surplus Sales of Nebraska (800-244-4567) to get replacement coax. I think that they may be the least expensive.
If you are using conduit underground be sure to have the center higher than the ends and place plenty of gravel at each end for good drainage. It is almost impossible to keep underground conduit 100% dry but this configuration will at least keep the water from pooling up in the conduit.

>the cellfone network at *all* 'cause (1) not enough of the towers had
>emergency power supplies and (2) the newsies all just *had* to file their
>stories and used the only telephone links they could access...the cellular
>links.

I was 5 miles from the epicenter of the last (big) quake, and after activation
by the USPHS, was on cellphones for 3 weeks after the quake. I didn't have any
trouble with the cellphones at all, except when I was boxed in on the freeway
with semi's all around me. This was where the overpass collapsed, it took
in some cases hours to go a mile, til the bypass was built.

But, counting on anything in a disaster is a bad idea. In addition to my
personal phone (handheld), I had avialable in my car a government phone

(bag phone, so it had more power), a 50 watt 2 meter rig, a 25 watt 440 rig, a 5 watt commercial high band handheld feeding a 50 watt amp, and a 6 meter rig.

My poor Taurus - it looked like a pin cushion.

# 5061. Using JVFAX70 with HAMCOMM interface?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-30 03:09:00 UTC
From: COLERK%snypotvx.BITNET@UBVM.CC.BUFFALO.EDU
Message-ID: <F15B564165051B81@snypotvx.bitnet>
Source record: 254200

Greetings....

When all else fails..ask the question! I've just "attempted" to assemble the HAMCOMM interface for use with the JVFAX SSTV program. He mentions in the docs for JVFAX that the HAMCOMM interface works quite well, at least I think that is what he said....anyhow the "receive" portion works as advertised, however, I'm having problems with the "transmit" circuit....I have checked and checked my work and as best I am able to determine I have it on the board correctly...the problem being when I bring up JVFAX my transceiver goes into transmit! Unfortunately I'm an appliance operator so I've probably missed something quite obvious to anyone else....I've read the docs on JVFAX and "I think" the program wants to use DCD, RI, CTS, and DSR to drive the interface....however, the HAMCOMM interface uses TXD, RTS, DSR, DTR, and Ground. Sooooo the question is can I use the HAMCOMM interface as described in the HAMCOMM docs and mentioned in the JVFAX docs, as is or do I have to modify the interface....? It doesn't work correctly but I can't determine if I've done something wrong or if the interface just won't work as is. This is all new to me but I had to start somewhere. Thanks in advance for any replies and apoligizes to those folks who will just shake there heads and think how dumb can I guy be! 73...Roger.

There are a couple of GUI (graphical) products available for
Delphi. "Internav" is supported by Delphi and is free but doesn't
work as an OLR (off line reader).

I am using and loving "Internet Jet" which allows me to move around
as I want to or set what I want to read by using a "two-pass"
feature. In this mode it operates as a robot. Start it... go make
a sandwich and when you get back it has accomplished as much in 8
minutes as you could do manually in 90 minutes.

>An Utter Novice,

Your AMiga 1000 will work fine for packet radio. I use mine (hooked up at Alinco DR0110T and an MFJ TNC-2 controller. I use JR Comm as my packet program, as NONE of the Amiga packet progams worked worth beans on my 1000. It is a stock 1000 with 2 megs of ram and an internal 55 meg hard disk. I am stuck using Kickstart 1.3 as I don't want to install the 2.x DOS roms.

Your HT will work just fine for packet use. People here (in Beausejour, Manitoba) are mainly using Kenwood TH-28 (and 22's) for packet use with great success. Actually, most of us run the TH-28's on the rubber duck using 500 milliwatts to the local packet node. You may have to scour the local Radio Shack for the proper plugs...but it will work.

Good Luck...

> comments on the phone and having to endure several months worth of
> problems I would like to say this guy is an IDIOT. To give you an idea

I don't know Matt, other than from a protracted telephone conversation I had
with him a couple of months back. He wasn't rude to me ... Still, I'd like
to know what consititues '... several months worth of problems ...'

> this guy mounted the repeater controller to the reciever with no
> shielding, which is less than one inch from the transmitter. Not only

And what trouble did this cause, per se?

> that but when we opened the box and saw the Motorola MICOR repeater MOBILE
> radio, we were not the least bit happy with Mr. Bush. Anyone with any

I understood that many 'commercial' repeaters are constructed in precisely
this fashion. Certainly the VHF Motorola Compact (based on the MC Micro)
look *just* like this as shipped from the factory, with the addition of a
mains PSU.

> bit of sense will either not purchase one of these pieces of shit or will
> they will be in for lots of headaches. Matt Bush is an IDIOT!!!!!!

Since I have been considering buying a 6M system (less controller) from Matt,
I'd *really* appreciate your elaboration on the above.

For me, this seems like a fundamental problem with amateur radio.

The communications systems of the future demand "networking",
be it voice or data. This requires cooperative investment of time
and money in the development, operation and maintenance of
such systems.

Most, IMO, radio amateurs are happy with the "this is a hobby"
philosophy and are content to invest their time and money
ONLY on their own personal stations. As far as investing time
and money in linked repeater systems or packet radio nodes
and backbones, they are more than willing to let someone else
foot the bill. The "bill" is beyond the resources of a miniscule group
of interested radio amateurs. As a result, our internetworking
capabilities are truly miserable.

ARLP054 Propagation de KT7H

ZCZC AP68
QST de W1AW
Propagation Forecast Bulletin 54 ARLP054
From Tad Cook, KT7H
Seattle, WA December 30, 1994
To all radio amateurs

SB PROP ARL ARLP054
ARLP054 Propagation de KT7H

Solar flux declined slowly last week. Conditions were unsettled, with the geomagnetic activity highest on December 24 when the A index was 22. The K index went as high as four over several periods that day.

Look for solar activity to stay very low, but it should begin to creep up toward a small peak near 85 around the middle of January. A recurring coronal hole may cause a disturbance around January 19 and 20.

Low solar activity will suppress the MUF and make openings on the higher bands unlikely. Probably the best band for any worldwide openings is still 20 meters.

Solar activity should stay low and in fact decline further over the next few years. The latest forecast shows average monthly sunspot numbers declining until around May, 1996, with sunspots reaching the current level again around a year later. Solar flux should bottom out around June or July of 1996, and climb back to the current level around October, 1997. It is probably safe to say that conditions won't be measurably better than they are now for at least three years. The next solar cycle is expected to peak some time in 2000.

Sunspot Numbers for December 22 through 28 were 52, 51, 50, 48, 46, 41 and 36, with a mean of 46.3. 10.7 cm flux was 82.2, 79.8, 79.6, 80.6, 79.8, 75.9 and 78.9, with a mean of 79.5.

The path projections for this week are from San Francisco and Philadelphia to Cayman Island.

For San Francisco, 80 meters should be good from 0000z to 1300z, and 40 meters from 2300z to 1415z. Check 30 meters from 1600z to 0030z and again around 1315z to 1430z. 20 meters looks good from 1530z to

2300z, and 17 meters from 1700z to 2130z. On many days 15 meters should be open from 1830z to 2030z.

From Philadelphia, 80 meters should be open from 2130z to 1300z, and 40 meters pretty much around the clock, with the best time from 2300z to 1130z, and the only marginal period just prior to that time. 30 meters should be good from 1500z to 2000z, and around 2130z to 2300z. Check 20 meters from 1400z to 2130z, and 17 meters from 1500z to 1900z. 15 meters should be open on most days from 1600z to 1830z.

I think you misunderstand this. Ordinary telephone service has a rate that they charge per month, and in some areas, a measured service rate per minute. You don't pay, you don't get phone service. You don't rail at the wireline providers for not giving you phone service if you don't pay your bill do you? Cellular is similar. Ordinarily, the monthly rate is $20-$35 per month and the per minute charge is in the $0.20-$0.35 range. The "lifeline" services are intended to save you money. They do that by lowering the per month charge to the $9.95-$19.95 range, and upping the per minute charge to the $1.20-$3.50 range.

*911 calls are always free under either billing plan*, and in most areas 911 calls are accepted even from phones that are not registered, IE no fees which is a better deal than you'll get from the wireline phone. This high usage charge is for *other* calls that are not of an immediate life safety nature, say to towing services or to home. Since you won't use that much, your bill will normally be much lower under lifeline plans than under standard rates. It's a good deal. The cellular services aren't ripping you off.

Hello,
On 17 Dec 1994, I worked EA9IE long path on 20 meters.
I QSL'ed to the call listed in the QSL server, "N6TR".
I just got my card back from N6TR saying that he was
only EA9IE in 1990. Does anyone have any idea who is
operating as EA9IE now and what the QSL route is?
Thank you very much. sjhawk2@srv.pacbell.com

There must have been a reason for creating the no-code license could it have been that the number of amateurs was dwindling away and something needed to be done before it went a away completely.
I am not sure but it at least gave me the capability to enter the hobby and gives me people to are willing to work with me (elmer) and help me learn the code. I think I would not have met these fine people otherwise and would still be an outsider looking in.

Internet crm@oes.ca.gov or seh@oes.ca.gov

Bulletin 357 OPS - Wildfire Roles 2/2
Release Date: December 19, l994

Continuation:

"Once again we proved the invaluable service that
we as a group of trained volunteers can provide in times of
emergency. Comments made to us from county fire and police
officers proved this out. There were times that we were the only
reliable means of getting information to these groups as all
their communications were overloaded. At one point, we were the
ONLY way available to the local fire department to find out where
the fire lines were.

I hope you'll get involved in your local
RACES and ARES programs. It's not enough to respond to an
emergency. Without the proper training provided by ARES and
RACES, you can be of little help. A trained pool of volunteer
communicators can be invaluable in the saving of lives and
property. There is no way that the public sector can provide the
manpower and equipment to handle these emergencies. Your
assistance is needed.
---By Tim Low, N6ZUC@KJ6VC.#SOCA.CA.USA.NA

* * * * The preceding report underlines the importance of
training by and with local government officials and its ACS,
RACES or equivalent personnel. Such personnel provide Public
Safety communications and services for state and local
governments. Such training and know-how cannot be obtained out of
publications and printed references alone. Your volunteers cannot
operate in a vacuum. They deserve your regular attention,
management and encouragement. Don't leave absolutely everything
up to your Radio Officer to serve as a buffer between you and

your unpaid staff. To do so will doom the volunteer program to failure. We seek more reports, such as that by Tim Low, to describe the separate but vital roles of those in the RACES and the ARES.

To our Eastern and some other readers we must point out that, in the West, for any emergency imaginable, there is always a government agency charged by law to respond to that emergency and never a volunteer group answerable to no one. We appreciate that the latter reflects the spirit of volunteerism of over 200 years in some states, but that condition is dwindling. We cannot self-dispatch ourselves. Volunteers are answerable in every case to a designated authority. It is for those authorities and their coordinated volunteers that these BULLETINS are addressed.

Thank you one and all. ---Stan Harter, California State Office of Emergency Services, KH6GBX@WA6NWE.#NOCAL.CA.USA.NA

Bulletin 358 OPS - Unit Activities
Release Date: December 26, l994

Your RACES unit and Amateur Radio newsletters are appreciated. They provide valuable ideas and suggestions. For example, the Orange County RACES not only issues a monthly newsletter but has an extensive year end manual. The manual reviews the year, shows goals for the new year, includes the 12 monthly bulletins, discusses mutual aid, a membership and 3x3 callout list. Their 1991 and 1992 manuals were over 90 pages each!!

Orange County is in a complex metro area of numerous cities in Southern California east of Los Angeles. In January l993 there were sixteen city RACES units in the county. With strong leadership, this unit does a lot of different things to serve and maintain a high level of interest. Here are examples.

A monthly meeting with a guest speaker such as Richard Hartman, N6DAW, Maintenance Superintendent, 2nd Combat Communications Squadron, California Air National Guard. He described his squadron's communications equipment and capabilities; included was a Mark 108 Humvee the squadron used for emergency communications on the island of Kauai after Hurricane Iniki.

County RACES participants, in uniform, (two-tone blue, light over dark, similar to fire dispatch uniforms) reported to a local Mall for the event called "Emergency Services: A Focus on Preparedness". A RACES exhibit was open inside the mall after the conclusion of a Mall Disaster Drill. Their goal was to explain to the public how RACES enhances Public Safety communications in an emergency.

A Special Statewide Election offered another application. 30 members, in uniform and with Handie-Talkies, at ballot pickup points in 16 cities and at the vote tally center.

Responded to communications Mutual Aid requests: July 4th parade; a city festival; city request for March of Dimes Walk-America; search for missing Boy Scout in mountains of an adjacent county - thirty-two RACES people responded to an all city mutual aid request over a 6 day period.

Exercises and drills included County RACES activation for a statewide drill at the EOC providing personnel with the chance to test the EOC equipment and inter-face with other agencies. Annual SET, simulated emerency test, and Field Day, County Marathon covering 26 miles across several cities with over 100 operators used for the coordination.

May this stimulate ideas for you and help your unit achieve its goals. Thanks for your efforts in this field. May l995 be a year in which you find peace of mind and joy in all that you do.
s/s Stan Harter and Cary Mangum.

In article <drenze-2912941731320001@s1170.infonet.net> drenze@ins.infonet.net (Douglas J Renze) writes:
>Another point to remember is that if there *is* a natural disaster, as
>soon as the newsies get there, the cell-fone links are going to be
>*flooded*. In the last Calif. quake, civil defense-types couldn't access
>the cellfone network at *all* 'cause (1) not enough of the towers had
>emergency power supplies and (2) the newsies all just *had* to file their
>stories and used the only telephone links they could access...the cellular
>links.

Both of these points are being addressed. The cellular providers, especially the wireline providers, are taking steps to assure emergency power to their sites in most areas. Many of the networks also are capable of operating separate from wireline links, at least with limited capacity. This frees them from downed trunks and COs. Many sites are being hardened to resist ordinary disaster damage as well.

The second point is being addressed in several ways as well. The analog cellular system has a limited number of channels per cell, far less than the 400 channels assigned to the provider. So a given cell can only support a few, 6-8, callers at the same time. (The reason this is so is that adjacent cells use other subsets of the total channel assignment to avoid mutual interference. The total system is set up in a honeycomb arrangement, and a given channel is only reused several cells over from the one you are in.) As the systems convert to digital, many more phones can be supported per cell, and PCS will add an entirely new group of channels in a different part of the spectrum. Many providers are implementing priority systems so that certain numbers will have first call on the limited resources. The civil defense and public safety agencies will have priority on the cellular system, even if that means interrupting a news reporter's call.

Cellular isn't bad now, and it's getting better. There's still a place for amateur radio, but that place is shrinking as time goes on because the amateur networks are sparse, and quite far behind the times technologically. It doesn't have to be this way, but to date it is. Amateur nets are like the old manual switchboards in the telco world, they depend heavily on human intervention and human ad hoc knowledge of who's where doing what, and what resources are available to establish links to route messages. That has a few advantages, and several disadvantages for modern disaster communications.

A major improvement would be better knowledge of who's where, and what resources are available to establish links. Systems like APRS hold promise of giving operators up to date knowledge of where people and resources are, and good prior planning can help in identifying what communications resources are available to which points. There is still very little intersystem linking and routing of amateur communications resources, among themselves or with commercial communications networks, however, and that needs attention.

Cellular already supports tracking of communications resources, offers automated routing between resources, and has the capacity to do call transfers, voice mail, and conference calls built into the system. The new digital systems will add more advanced paging and Email functions as well as offering vastly increased capacity. Amateurs will have to really hustle to compete for the emergency communications niches they can fill.

With the much better and faster communications offered by cellular, disaster agencies will begin to face another problem, information overload. With such easy access, officials are going to need call screeners, and someone to prioritize the information that is going to be flooding them. This niche could be filled by a communications person, but usually isn't today because the current communications systems don't have the capacity to generate the problem. Amateur operators generally aren't authorized to make such decisions today, and likely won't be in the future either unless they are integrated into, and trained by, the agency they are supporting to carry out that function.

# 5083. IOTA Info Copyrighted?

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-30 16:37:12 UTC
From: dearnshaw@worldbank.org
Message-ID: <1995Jan3.140328.4319@worldbank.org>
Source record: 254085

Is the information in the IOTA Directory copyrighted?

The reason behind the question is that I've noticed that a few commercial Log Program suppliers have either not included IOTA information because they refuse to pay royalties, or include it at an extra charge. What's the story here? I understand that the Directory contains additional information, and that possesion of the Directory is required for IOTA awards, but surely, the IOTA designations and the islands that are listed can't be proprietary.

What would my (legal) position be if I were to create a machine-readable text file of the IOTA designators and their associations based on information in the Directory, and made the file publically available at no charge (not that I am planning to). Would I be violating any form of copyright protection?

Curious.

>for around 180 bucks. Same antenna works great. Call 1-800-558-0411
>Amateur Electronics Supply in Milwaukee and ask for a catalog. Another
>good source is Tucker Electronics at 1-800-527-4642. 73

I don't think any of the radios you mentioned, except the Drake R8,
would be an improvement on the GE Superadio for BCB reception. The
others are aimed at the SW listener and don't have as strong a BCB
section as the SR. The antenna could be a help, but a directional
antenna will do best since the usual problem on the BCB is pulling
a desired station out of a mass of other stations on the same, and
adjacent, channels. The ferrite loop in the SR is pretty good, but
a big outside army loop might do better, and one phased with a
voltage probe whip to yield a cardioid pattern would likely be even
better. There are plans in the transmitter hunting book sold by
ARRL that could be adapted to the BCB.

>Can somebody actually do packet with an HT?

A HT can be used for 1200 baud packet, lots of people do. Running an external antenna and a power supply are good ideas, and fortunately the HTX202 can tolerate the stronger signals from an external antenna better than most HTs. Still, it may be a bit lacking in power in some cases. If there's a digi or node nearby, it may suffice. Like with most things, a better signal will give better results, but enough signal is enough, no need to run a kilowatt if it isn't needed. This will be a site specific issue. Since you already have the HT, give it a try first. If you find you need more power, another rig may be necessary. If so, try to find one suited to 9600 baud too.

>What TNC can I use with an HT and an Amiga using AmiCom?

Almost any TNC will do. If you had a PC, even the Baycom unit would work for you, but since you run the Amiga, it's better to get a real TNC. The Kantronics KPC-3 is popular, small, and about as cheap as they come. If you want to venture into 9600 baud country, however, you'll need a different TNC and radio.

An old, and cheap, crystal controlled mobile radio may be your best bet for conversion to run 9600 baud. True FM and a direct discriminator output are the key things to look for, as well as an IF filter that isn't too narrow and doesn't have too much phase distortion near it's passband edges. There are several 9600 baud ready TNCs on the market, most any of them will do, but they are more expensive than the 1200 baud units. You could buy a TNC now that is upgradable to 9600 later, but that's probably false economy. 1200 isn't going away any time soon, and a HT and a KPC-3 make a fine portable combination, even if you have a 9600 baud setup at home.

# 5087. Standard C108 Mini HT

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-30 17:09:58 UTC
From: cjackso@pebbles.uswnvg.com
Message-ID: <3e1et6$91p@fred.uswnvg.com>
Source record: 254087

Well - I just got one of the new Standard "mini" HTs (the tiny one
that runs on 2 AA cells) for my wife, who is going to take her "No-Code"
Tech pretty soon. While she's studying, I get to play with it :-)!

It's pretty impressive - Standard has packed a lot of features into a
small package. The ONLY thing I have found that I don't like so
far is that that it doesn't have a CTSS tone for 179.9, which is
what the busiest repeater in this area wants. Does anyone know if
Standard has addressed this, or WHY they didn't go that high to
begin with?

Thanks in advance!

73 de N7QNM

>30 miles from my home.

Paul, this can be a lot harder than it sounds at first. If you can arrange line of sight between the transmitter and receiver, most anything will do, but if you can't, this is an awkward distance to cover. For non-line of sight paths, a fair amount of power is going to be needed at VHF/UHF, or you're going to have to resort to HF groundwave, likely in the 160 meter or 80 meter range, and that's going to involve large antennas.

This is one of those cases where a high site repeater could really come to the rescue. You don't specify that this is an amateur radio project, but if it is, this sounds like a job for packet through a local high site node. If this is to be a non-ham project, you're likely in a world of hurt. None of the easily licensed telemetry frequencies are going to serve this distance well with simple equipment.

That's certainly a point. The average age of amateurs was steadily increasing, at a faster rate than the average age of the general population was increasing. That greying of amateur radio was not healthy for the long run. I believe the average age got up to 57 before the code test free license was introduced. It's been inching back downward since then. It'll probably never get back down into the 20s again, kids today have too many other alternatives that are easier, and more attractive, to enter. But it will be good for the service to get the average down into the low 40s or mid 30s again.

>I am not sure but it at least gave me the capability to enter the
>hobby and gives me people to are willing to work with me (elmer) and
>help me learn the code. I think I would not have met these fine
>people otherwise and would still be an outsider looking in.

Yes, one of the more positive things about the code test free license is that it doesn't shunt newcomers off to narrow ghettos as the Novice license did. It mainstreams the holders so that they come more in contact with experienced operators. This can be a very good learning experience if approached properly by both parties. I hope you do more than learn code, though that's fine if it's what you want to do. I hope you'll also get the desire and fire to try newer modes, to build, and to participate in the many public service aspects of amateur radio. It's all there waiting for you. It'll take you the rest of your life to explore all the facets of amateur radio. There's never a need to be bored, new horizons constantly beckon.

Do you know about the WB4APR automatic packet reporting system?
The mobile vehicle has a GPS receiver hooked to a TNC sending unconnected packets. The home site can track the mobile one on a computer screen which has a map of the area (available in PC and Mac versions). The TNC can ID with not only lat long but temperature or anything you can put into serial form.

Is this anything like you'd want?

We don't. They'll simply refer you to the erstwhile ARRL... who'll request
the matter be submitted (in writing) to some POB... so their "OO Team" will
deliberate whether or not it's worth researching. If, withing their august
opinion, it is... upon duly listening... they may or might consider passing
it on to the FCC. IOW, rotsaruck!

I moaned to the Allegan (MI) field station... 20 miles from here... and got
a "Ham-radio Is Self-Policing... Call The ARRL" lecture last year!

a while back i saw a really good definition of "emergency" posted. it was something along the lines of "if by doing this you knew that your amateur privilages would be suspended forever would you still do it? if the answer is "yes" then it is an emergency." it rules out things like flat tires and leaves room for sinking ships. a good def i think....

: > shielding, which is less than one inch from the transmitter. Not only

This appears to be standard construction practice for a mobile made into
an amateur repeater. The mobile should have the top and bottom covers in
place. How much more shielding do you require? Are you using double
shielded jumpers for your duplexer and antenna feedline?

: And what trouble did this cause, per se?

: > that but when we opened the box and saw the Motorola MICOR repeater MOBILE
: > radio, we were not the least bit happy with Mr. Bush. Anyone with any

If you were not happy with a Micor mobile used as a repeater in the
amateur service, why did you keep the device for several months? You
could easily sell that repeater and get a real Micor Repeater. This may
cost you several thousand dollars, but you will then have a high power
continuous duty repeater station. Be sure to obtain duplexers with at
least 120 db isolation and low insertion loss.

One word to the wise ... check with your local repeater coordinator to
see if there are any suitable repeater frequencies available in your
area. Ask other local repeater trustees for help.

: Since I have been considering buying a 6M system (less controller) from Matt,
: I'd *really* appreciate your elaboration on the above.

Why not go to the next ham swap meet and buy a micor mobile, any band, for
less than fifty dollars and do the conversion yourself. Most of the mod
servers have the motorola micor mod files. Matt is saving you the
pleasure of an evenings work.

If putting up a repeater were somthing an idiot could accomplish in an
evening, I don't think anyone would enjoy the use of your machine. There
would be thirty-two or more repeaters on every frequency, one for each pl
tone ;-)

Again make sure that there is a suitable frequency available befor you
begin your project or you could be in for your next big dissapointment...

Bob

Obviously, somebody at sometime earlier this week wrote:

>>What is this mad passion for turningham radio into HAM radio?
>>It's not an acronym, kids. Little h-little a-little m is just
>>fine.

And then somebody else just recently wrote:
>Get a life!

For which I whole-heartedly agree. Like this is somekind of major
deal in HaM rADio that has to be worked out or something.
Then it finally hit me, the difference between the two:

ham - those hams who QSO over a wireless medium, like real radios,
CW, SSB, HF, amidst the QRM/QRN that has been there forever.
In SSB, CW, AMTOR, RTTY, etc., ham/HAM all sounds/prints the same.
HAM - those who think the entire extent of this hobby is a newsgroup
on internet and likely haven't placed a carrier on-the-air
in months. Only UNIX would care if its ham or HAM.

Seriously, ham radio is a big hobby. Learn to enjoy it. Who cares if
a guy says "73" or "73's," or if Q signals should even be used on phone
or if you should terminate a CW transmission with "K" or "KN."
(Remember those month long discussions???). Ham radio is about meeting
people on the air, a fraternity of sorts and having fun. Perhaps us
older hams need to start demonstrating THIS aspect of ham radio to the
newer hams. If we have failed to teach you that, we're sorry. So
lighten up and lets learn to be good-old-hams again.

And for those who would like to flame me, I'll be on 80 and 40 meter
CW this weekend, primarily during Straight Key Night.
73, Paul, NA5N

I've got a big problem...

The UHF side of my Kenwood TH78A will not transmit sub-audible tones (PL), touchtones, or any sounds from the mic. The VHF side will, without any problems. When I do key up on the UHF side, it opens up my other handheld's carrier squelch, but otherwise, that sucker is dead...

Any similiar problems and solutions that you've had, please e-mail back!

Thanks!

I'm interested in getting involved in packet (after all this time....). Anyway, I'm really uninformed when it comes to the subject and was wondering if I could get some suggestions on what TNC would be nice to start out. I allready have an old 286 IBM compat. pc and a a radio with a 50 watt output. I'm looking to do this on the economical side so I'm looking for an INEXPENSIVE tnc and I'm going to homebrew a 2 meter verticle ant. Any suggestions on getting started, PBBS sights, software (public domain if possable) ect. would be appreciated.

tnx & 73

AC> The DX Grid Hunting Program

Great idea. I will spread the idea into other networks.
May I suggest that you upload it to the ARRL BBS and other
prominent amateur networks, BBSes etc.

Also, HOW do I find out what my grid square is?
I live in Gaithersburg, MD close to the Montgomery County
Airpark (airport).

Always wondered in case I can ever get back on VHF too!

Marc B. Grant (marcbg@metronet.com) wrote:
: I've sold thousands of $$$ worth of equipment on the net, and to date,
: I've dealt with good, honest folks who are looking for value.

: You know, I'm getting a little ticked off at some folks who believe that
: they are the Price Police, feeling free to make snide remarks, both via
: Postings and e-mail concering the pricing of people's equipment. I'm not
: one to flame, but I'm pissed, so are many others of us, and let me explain
: why.

: So, when I post a radio, and the price seems a little high, maybe it's
: because I'm testing the water - or maybe it's because you're looking for a
: REAL bargain - or maybe I want to see if there is someone who wants a
: quality radio at less than retail, but still wants value. Or maybe I'm
: clueless and really do want feedback!

: I posted a radio recently which sells at a street price for over $450 -
: for $315. It took me two months to sell it because of smartass folks who
: posted to the newsgroup AND sent me mail with offers like "$175" or posted
: things like "I can get it for $350" etc etc etc. When I finally sold it,
: the guy I sold it too was TICKLED with the purchase, realized he saved 30%
: off the purchase price of a new radio yet still had all the value of
: buying a new unit. He even called after he received the unit and used it
: a while to thank me.

: What pisses me off to no end is when I get cute little remarks BOTH via
: e-mail and postings that say things like "Good price - NOT" or "This is
: priced too high - you are trying to rip people off" or "What's the matter
: with you" or "Your price is ridiculous" - these are actual snips from
: actual email messages. I know many of you who sell things on the net have
: received them also.

: Folks, this is a free market. If you have a beef with prices, then write
: the poster personally (Don't post it to the group) with something like:

: "Marc - your price seems a little high. A new radio at XXXX costs only
: $ZZZ, and I was wondering why your price was so high. Just thought I'd
: let you know, and anyway, good luck".

: That's what I do. A nice polite note. You know what? I've received
: phone calls thanking me, because the poster didn't have a clue that they
: were overcharging. But what type of response would I get with "Hey, are
: you trying to rip people off?" Probably not a good one.

: OR, just shut up and save the bandwidth.

: In the spirit of the season, I bope that those of you who are members of
: the Price Police take this to heart. Folks on r.r.swap, scanner, and
: r.r.a.m. are smart enough to judge for themselves - and if they're not,
: they can always post a message inquiring what the price of a particular
: used item should be. And if they're not that bright, well, then they
: should buy retail and stay out of the Usenet grabble.

: If you have nothing better to do than to flame about someone's high
: prices, I suggest you are spending too much time in front of the CRT.

: And to all, a Good Night. . . . .

...

This happens to all dx'ers at one time or another, but I'm pretty sure that it's not due to a lack of courtesy on the manager's part. My supposition is that this is a last ditch effort on the manager's part to get cards to ops who failed to include an sae/sase, who's return postage was stolen or not included in the first place, who's address was so illegible that the card was returned to the manager, and so on. In some parts of the world the bureau system either doesn't exist or works very poorly, or I imagine that the dx manager would deal with these cards that way. On the few occasions when I've received such cards, I've noticed that they're all intended for 5-land calls. Why doesn't the manager write a note? I dunno, unless it's that dealing with hundreds or thousands of cards makes you reluctant to write anything you don't have to.

Of course, I could be wrong. This might be proof of a world-wide conspiracy on the part of profiteering dx qsl managers, devilishly ripping off W/K hams a few postage stamps at a time. I kinda doubt it though. :-)

There are four ways to deal with the situation. You obviously can simply trash the cards. Or, you could return the cards to the dx manager. Or, assuming the cards are all for your call district, you could send the cards to your incoming bureau along with a note of explanation. Finally, and this is what I usually do, you can drag out the callbook, look them up, and mail them to the intended receipients. Since I've never had to deal with more than 5 or 6 cards in any given year, this last approach isn't all that much bother, and I'd like to think (silly me) that others would do the same if they received a card intended for me.

(more stuff deleted)

Just for the record, Gary, I haven't taken a poll or anything, but I think you will find a lot of people unhappy with this statement. I got my Novice in 1962...one year, non-renewable, CW only, crystal control only. Far from being a "ghetto", I, and I imagine many others, considered this a fantastic WONDERLAND!

I, personally, have seen nothing in my area that would indicate that the no-code license was a mistake. We have gained a large number of eager, willing-to-learn VHFers. But do not be too quick to condemn the older system. The Novice license was great fun, a great opportunity, and nothing at all like a "ghetto". And actually, there seemed to be far less "class distinction" and far more comraderie then than now.

I don't remember how long you have been licensed, Gary, or if you ever held a Novice license, but if you did and your experiences led you to this opinion, it is unfortunate, but I don't think many share it.

What about it, fello OF's? Was the Novice a ghetto?

i would say to start, check out Motorola's offerings..

(i would think Delco would have some official contact with Moto on a formal basis...that means Delco should have something like a component applications engineering library just chock full of reference books from the suppliers....and probably tools for looking for parts that fit an application regardless of vendor.

just a thought.)

## 5119. Courtesy in exchanging QSL cards

Newsgroup: rec.radio.amateur.misc
Date: 1994-12-31 07:24:37 UTC
From: ys@isr.harvard.edu
Message-ID: <3e30vl$sph@decaxp.harvard.edu>
Source record: 254104

I have a question about the courtesy in exchanging QSL cards
with DX stations.

I sent a self-addressed envelope and an IRC to a DX QSL manager.
This QSL manager resides outside the U.S. When I received my
QSL card, I found other QSL cards are enclosed. These cards are
addressed to U.S. amateur radio stations which I have no previous
knowledge of. Apparently, the QSL manager wanted me to check
the address of these U.S. hams, and mail the cards to them.
In this particular case, there were four QSL cards enclosed without
any postage, envelope, or memo. This type of incident also happened
with some other QSL managers, by the way.

I would be happy to help this person, but I would expect that he
writes at least a brief memo explaining what he would like me to do
as a matter of courtesy. I am wondering if anybody has the
similar experience. Or, am I expecting too much from him
as courtesy? I would appreciate any comments, advice, and
suggestions.

Well I look like a disaster junkie but I work as a Catastrophe insurance
adjuster. I normally make the area within 48 hours.

The ham services after Andrew sounded like a 3 ring circus and hams were
used only for h and w work. Cellular service was up an running within
24hrs of the hurricane, albeit busy.

The 1993 floods in the mid west was the other end of the spectrum. Hams
worked very closly with the local authorities. The operators were
trained and ready. I spent 2 days om 2 meters coordinating levee orders
for sand bags. Hams were everywhere in boats, military convoys, rescue
boats etc. Packet wasn't used much.

Here in Houston Texas, local RACES is pretty dog gone good. They've prepared with VHF/UHF, HF and packet.

Its preparation, planning, and cooordination with local authorities. Yes there are better ways of getting radio traffic thru, but ham operators can provide the trained human resource that is so important in disaster relief.

IMHO, i think packet/digital modes will be the way to go in the future. Clear concise commmunications without word counts and phonetics.

>I sent the HT to them, and they sent a leter saying "did I really want to
>fix that old HT?"
>I called and said yes.
>They fixed it and it works today as my packet 2meter radio.
>And it works very well ...
>And after the estimate of $150, they billed my credit card just $90.

My 727 collected a multitude of problems over the years.
The two that happened within 2 weeks of each other finally made me send
it to Yaesu for overhaul: it drifted beyond the range of the internal
trimmer to get back on freq (it was about 1.75kc off at 450mhz) and one
of the metal tabs that holds the battery mount to the frame broke.

So I sent the radio and a checklist to yaesu:

1 new frame (required a full disassembly of the radio!)
2 new keypad (trivial)
3 new volume and squelch pots
4 new light behind the LCD (was incandescent, came back with leds)
5 new light behind the keypad
6 new 25mhz main synthesizer crystal
7 three new pushbuttons on the top of the radio
8 new PTT button and function button
9 full tuneup, with special attention to the 440 spurs.

Total price was quoted under $150, actual charges were about $135.
The only gripe I have is that the audio came back adjusted a little low-
about 4khz, and I had to tweak it with a friends service monitor back
to where it should be.
The radio was purchased used, I had used it for 4 years, the work above
was done 13 months ago, and the radio is still working great (and hasn't
drifted - they must be using better crystals)

$135 for a full rebuild (with a warranty) beats buying a new duobander !!!

If they would have had 2M SSB/CW that would have given them a 300 to 500 mile range. Theirs tons of SSB/CW Ops in AZ as well as high level repeaters. Going offroad with out atleast a CB is STUPID! Take the Stolpa family that beacame lost in N.W. Nevada... I live near where their ordeal took place and can tell you from first hand experiance that even in the dry Summer nobody travels these roads without some kind of radio if they know whats best. Out here in Rural NV CB is fairly quiet and there are many Mtntop repeaters to chose from. Had I been dumb enough to get stranded in the first place (Been there too!) all I would have to do was turn on the rig and yell. Even nonhams can use Ham Radio if life or property are threatened. I know of a woman here in NV who was married to a ham but not licenced. They live in a Mtn cabin accessable by foot or snowmobile only. In a snow storm while hiking in some groceries she became lost. She would be dead right now if it wasn't for her carrying a 2M HT pretuned to a good high level repeater. We kept in touch with her for 12 hrs, instructed her on how to keep her and her baby warm and dry, until a rescue team using DF gear found her 2M signal. Being an active Weak Signal VHFer I travel many backroads to many hilltops to activate rare Grid Squares. Permanently in the truck is a 2M SSB/CW/FM rig and a 100W brick amp W/Rcv Preamp. I have my choice of a 5/8 Vertical or Horz Dipole while in motion. This combo has netted several 300+ Mile QSOs. Add 11 DBD from a 15 FT yagi I carry and your always in touch with someone.

: Most, IMO, radio amateurs are happy with the "this is a hobby"
: philosophy and are content to invest their time and money
: ONLY on their own personal stations. As far as investing time
: and money in linked repeater systems or packet radio nodes
: and backbones, they are more than willing to let someone else
: foot the bill. The "bill" is beyond the resources of a miniscule group
: of interested radio amateurs. As a result, our internetworking
: capabilities are truly miserable.

The "this is a hobby" philosophy is the exact definition and backbone
of amateure radio, otherwise it would be a commercial venture with
pecuniary interests and no longer amateure. As far as internetworking
goes, what about the linked VHF/UHF systems in the western U.S. I
recently read about? With technology in general it is the
hobbiest<hobby beast..G> that account for the majority of
advances...this medium we are using now is a perfect example, most
commercial vetures for the "average" computer user are still at 2400
or 9600 if you are lucky...while the "hobby" BBS is using 14.4 as a
standard and 28.8 quite frequently. Amature radio data is a completely
different animal given the actual medium of transmission<air>.
For disaster comms IMHO amateure radio should be a "last ditch"
type.....however what about volunteer orgs. that rely on VOLUTEERS for
resources...I don't think ham radio will die too soon.
Here in FL this past year with all the monster storms I heard one or
two POLICE channels go down while the ham rptrs. stood strong. BTW I
am just illustrating how ham resources/fullness can be greater than
the established "norm"

Ghettos can be warm fuzzy places where people of similar experience
can gather safe from the wide wide world. Even in 1963, contacts
with non-Novices were rare on the Novice bands. The blind led the
blind in a merry chase.

>I, personally, have seen nothing in my area that would indicate that

There were fewer classes then. As I recall, the biggest "class"
distinction was between the Ws and those newcomer Ks. Novices
were too low in the pecking order, and too temporary, to be noticed.

>I don't remember how long you have been licensed, Gary, or if you ever
>held a Novice license, but if you did and your experiences led you to
>this opinion, it is unfortunate, but I don't think many share it.

I didn't have a bad time as a Novice (1963), it's just that I was
huddled together with a group of equally clueless newcomers. We
naturally passed around bad practices that we had to unlearn after
being exposed to the wider world. Operating in the General portions
of the band came as quite a culture shock to many of us. That wasn't
too bad when Novice was 1 year non-renewable, but it's for life
now if you want, and that's not a good thing. I think it's better

to have experienced role models right away so that you don't develop
a "Novice accent" in the first place from emulating others of the
clueless.

Of course if Generals, Advanced, and Extras didn't generally shun
the Novice segments, it might be better. The few who do enter the
Novice segments are outnumbered by the clueless. I think it's better
to have the situation reversed, where the newcomer is outnumbered by
the experienced. That makes learning by example much better. It's called
"total immersion" in language training, and I think it's equally valuable
in the socialization of amateur operators.

Gary

Hello,
I just heard on the radio (KCBS) that the Earthwinds got
off the ground this morning. Does anyone know of the hf freqs they
are using (amateur or not).

Very simple systems exist for tracking animals over that sort of
distance. Unfortunately, they involve the use of a satellite.

From: wcoyle@delphi.com
Message-ID: <hw34Iov.wcoyle@delphi.com>
Source record: 254136

One thing when QSL ing to consider is that if you work a novice, or a new general op, that person may not have QSL's printed up yet. By the time I got my QSL's printed, I had racked up over 100 QSO's and I had allready recieved about 20 cards. Some other things to consider in the QSL game

Some Novices and Techs are NOT in the callbook yet, so I have to wait to get a QSL before sending one.

Some folks can't be bothered (this it truely a shame)

Some folks are really busy and don't always have the time (I'm busy, but I usually try to write up the QSL right after I get off the air).

And last, the cost. With a new postal increase hanging over all our heads, the costs are getting high.

I myself QSL 100%. If I get a card, the other person always gets one back.

While we are on the QSL subject, has anyone given thought to the idea of a DOMESTIC QSL service? Some league officials had suggested the idea, and I was wondering what everyone thought of it.

In closing, I think QSLing is one of the traditions than no one can really argue with. You could sit here and argue about CW and AM untill you are blue in the face, but QSLing applies to all aspects of ham radio and is one tradition worth holding on to.....

Using the above rules you can work out the length of any letter, numeral or word in terms of 'standard units' (DITs, bits, or whatever). The International Standard word is 'PARIS' chosen, I believe, because it is exactly 50 DITs long. You can work it out but be sure to include the trailing 7-DIT inter-word space. I have used this as the basis for calculating DIT/DAH lengths for a morse tutor I wrote for myself years ago on a BBC micro.

At 12 WPM that is 600 DITs/minute or 10 DITs/second. I was reminded of this by a piece in the June '94 copy of "RADIO COMMUNICATION" which describes how you can calibrate the speed control of a keyer. A DAH is four DITs including its trailing one-DIT space so twelve DAHs take just 4.8 seconds. You can be more accurate by timing the number of DAHS the keyer sends in 48 seconds and divide the result by ten to calibrate the keyer's speed.

Subject: Re: "NO-CODE" Bashing

Gary:
Yes, one of the more positive things about the code test free license is
that it doesn't shunt newcomers off to narrow ghettos
as the Novice license did.

Greg:
...I think you will find a lot of people unhappy with this statement.
I got my Novice in 1962...one year, non-renewable, CW only, crystal
control only. Far from being a "ghetto", I, and I imagine many
others, considered this a fantastic WONDERLAND!

Gary:
Ghettos can be warm fuzzy places where people of similar experience
can gather safe from the wide wide world. Even in 1963, contacts
with non-Novices were rare on the Novice bands. The blind led the
blind in a merry chase.

My response:
Interesting concept of "ghetto". However...as I look through my old
shoe-boxes of QSL cards, I see about equal numbers of WN/KN calls and
non-Novices, as well as large numbers of DX. I didn't find on-the-air
help lacking, and good operating practice seemed to develop just fine on
the Novice bands.

Greg:
The Novice license was great fun, a great
opportunity, and nothing at all like a "ghetto". And actually, there
seemed to be far less "class distinction" and far more camaraderie
then than now.

Gary:
There were fewer classes then. As I recall, the biggest "class"
distinction was between the Ws and those newcomer Ks. Novices
were too low in the pecking order, and too temporary, to be noticed.

My response:
Either we grew up in totally different universes, or our individual
perceptions vary considerably. But then since I was one of the
privileged classes (WN), perhaps I was naive. Certainly, we could
recognize that K's were newer, but "looked down upon"??? A distinctive
"class"??? Not in my memory they weren't. And maybe, at age 12, I was
too ignorant to recognize that all those upper class hams were really
looking down their noses at me, but what I really remember is how

helpful and patient they were with me, and how much I learned from them.

Greg:
I don't remember how long you have been licensed, Gary, or if you ever held a Novice license, but if you did and your experiences led you to this opinion, it is unfortunate, but I don't think many share it.

Gary:
I didn't have a bad time as a Novice (1963), it's just that I was huddled together with a group of equally clueless newcomers. We naturally passed around bad practices that we had to unlearn after being exposed to the wider world.

My response:
I remember studying all I could get my hands on to avoid the "novice accent" before I even went on the air. There were good booklets on just that topic readily available...as there still are now. And I honestly did have no problem finding on- as well as off-the-air Elmering.

Gary:
Operating in the General portions
of the band came as quite a culture shock to many of us. That wasn't too bad when Novice was 1 year non-renewable, but it's for life now if you want, and that's not a good thing. I think it's better to have experienced role models right away so that you don't develop a "Novice accent" in the first place from emulating others of the clueless.

My response:
Experienced role models were there if we just looked for them, and were willing to listen to them. Even if they didn't frequent the Novice bands (though they did), all we had to do was tune around and listen. You don't need a license to _listen_ to the other band segments. And the old saying is still true...the most important amateur radio operating skill to develop is the ability to listen.

Gary:
Of course if Generals, Advanced, and Extras didn't generally shun the Novice segments, it might be better. The few who do enter the Novice segments are outnumbered by the clueless. I think it's better to have the situation reversed, where the newcomer is outnumbered by the experienced. That makes learning by example much better. It's called "total immersion" in language training, and I think it's equally valuable in the socialization of amateur operators.

My response:
The Novice bands are certainly being abandoned these days, but not just by upper class amateurs. The new entry class of choice is the Technician license, sans code. Many of those who have not had the interest or ability to upgrade from Novice are probably no longer active. Thus the "Novice" band segments are simply suffering from attritional depopulation. The new entry level Technicians, under the

current structure, are experiencing "total immersion" with advanced class operators in the VHF/UHF bands. Hopefully they are benefitting from that. As far as HF is concerned, are you proposing a class-less licensing system with full privileges for all??

This is getting way too long. Subsequent follow-ups should resist quoting long passages (sorry I didn't!). Previous posts are there for review if needed.

I'm interested in making a small, portable, low powered repeater for special events, mainly in the UHF band. I've seen some units on the market that have come and gone.

Does anyone have any info on obtaining products to do this, or plans on building one? I've seen folks use the older orange paramedic comm kits with the small duplexers built in, and modify them for UHF, this is a thought....

Thanx in advance,

When you want REAL emergency-type communications, you go to the EXPERTS for advice. The Outback of Australia does this sort of thing FOR REAL, and regularly, on a non-amateur basis. There are several sets of HF freqs assigned for this service -- similar sets could be found in adjacent amateur bands, I should think. Is there someone on this list from VK-land that can describe how it all works?

[much stuff deleted for brevity]

This thread started as a simple request as to what service would be the most practical as an emergency communications medium for a camper. Now the whole thing has turned into the "What's wrong with ham radio/ No, what's wrong with cellular phone" thread. We have ham radio groups for these intricate discussions. It has gone beyond the subject of camping.

I was enjoying the discussion on the history of Colman lanterns a while back. At least it relates to camping....

This newsgroup doesn't get much activity, it's just a shame that most of it lately has been off-topic......

Re extended coverage of KENWOOD TH-28A VHF handheld:
---
I've had 1 of these for about a year & spent a lot of time chasing up
mods ( both for this & the TH-78A). Some of them involve internal
hardware mods to a tiny diode matrix ( ONLY for the brave !?), but
bizarre key press combos allow *interesting* extensions right away !
Of all things the TH-78 can play POKER with some combos

Air Band coverage ( totally undocumented by Kenwood !) from 118-135 MHz
works a treat on the TH-28A ( A.M. too) simply by these key presses.

1. Turn on & ensure in VFO mode covering VHF
2. Press & hold F button for a second or so (until it beeps)
3. Then press LOW button - voila = Aircraft Band !(A tiny spade shows)
( Repeat steps 2 & 3 to return to normal VHF coverage)

These Air Band freqs can be stored in memory by the way & scanned etc
along with any other memory channels. Why on earth is this feature not
more widely promoted !! 73 de ZL2AJZ in New Zealand

(P.S. my TH-28A covers 400-519 MHz receive too after a hardware mod.)

+-------------------------------------------------------------------------------+
HOW TO ACCESS THE WB3FFV AMATEUR RADIO INTERNET BBS !!!

I have placed a BBS system on-line that is mainly oriented towards the
Amateur Community (but there are plenty of other wares on-line). Through
user support I hope to keep the latest and greatest ham software on-line.
The BBS also offers access to nearly all of the Internet (USENET) NetNews
groups, plus access to most Internet services such as Email, FTP, TELNET,
Gopher, WWW, Callsign Lookup, Etc... Below is the information that is
needed in order to access the BBS via Telephone, Telnet, or FTP. Please
pass it around to as many ham's as possible.

System Name: WB3FFV
User Login: bbs

410-661-2475 - 12/24/48/96/14.4/16.8/19.2/21.6/28.8
(V.32bis,V.32terbo,V.34,V.FC,HST,V.42bis)

410-661-2648 - 1200/2400/4800/9600/14400/23000
(MNP2-5, V.32bis, V.42bis, Turbo-PEP)

TELNET/FTP - wb3ffv1.sed.csc.com (20.2.1.80)

Data Settings: 8 Bits, NO Parity, 1 Stop Bit
Times: 24hrs/365days (except for routine maintenance)
Software: UniBoard UNIX BBS Software (Version 1.30b)
Misc. Info: Machine is an Pentium-90/MP running UNIX System V Release 4.2
and features more than 4 Gigabytes of on-line file storage.
Most transfer protocols are available!! (5 phone lines)

I attempt to keep the latest and greatest HAM software on-line, and encourage
all to upload anything new that they come up with, as it is of benefit to all.
Here is a sample of a couple pieces of software that is available for DOWNLOAD:

KA9Q TCP/IP Software for the PC (Latest OFFICIAL release + TEST Versions)
KA9Q TCP/IP for the Atari-ST, MAC, & Amiga
KA9Q TCP/IP for UNIX based systems
KA9Q TCP/IP (The NOS release) [UNIX, MS/DOS, Amiga]
KA9Q TCP/IP (Version by G1EMM, PE1CHL, PA0GRI, Etc.)
N2GTE Packet Message Switch [GTEPMS]
WA7MBL BBS for the PC
W0RLI BBS for the PC
MSYS BBS for the PC running KISS TNC's
AA4RE BBS for the PC (plus BETA versions)
F6FBB BBS for the PC
```

G8BPQ PC-Node (Version 4.08)
Various BBS utilities and enhancements
Several MORSE CODE Tutors
TheNet software by NORD><LINK
Modifications for many HAM Rigs and Scanners
Digital Signal Processing software (DSP)
DX and contesting programs

If you are interested in using UUCP to connect to the BBS, this can also be done as I support Anon-uucp. The login to the system is 'uucpanon', and there is NO password. The listing of avalible archives are stored in a file called 'FILES', and it is located in the /var/spool/uucppublic. To retrieve the files listing just use the following command:

uucp wb3ffv!~/FILES /usr/spool/uucppublic (ASCII Text)
-or-
uucp wb3ffv!~/FILES.Z /usr/spool/uucppublic (16-Bit Compressed)
-or-
uucp wb3ffv!~/FILES.gz /usr/spool/uucppublic (GNU Gzipped)

This will move a copy of my files listing into your uucppublic directory.

If you want to access the BBS via Telnet all you have to do is TELNET to wb3ffv1.sed.csc.com, and login is 'bbs' with no password required. To use anonymous FTP just ftp to wb3ffv1.sed.csc.com and login as 'anonymous'. This system is currently attached to the Internet via a dialup SLIP link, and should generally be available 24hrs, but at times the modem will drop the line. Also since this isn't the fastest link, I will be limiting the maximum number of anonymous sessions for the moment.

If you have any questions or problems, feel free to contact me at one of the numbers/adresses below. Good Luck...

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 31/2330Z DECEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 31 DECEMBER AND FORECAST FOR 01 JANUARY - 03 JANUARY
---
1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 77/16

GOES satellite data for 30 Dec
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: 1.1E+04
Daily Electron Fluence >2 MeV: 1.3E+07 (normal)
X-ray background: A2.9
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
01 Jan 02 Jan 03 Jan
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 01 Jan: 75/13

---
2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 30 Dec
Learmonth 4 2111 1221
Fredericksburg 6 8
Planetary 7 7

Observed Kp for 30 Dec: 1322 2211
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
01 Jan 10 Quiet to unsettled
02 Jan 25 Active, with possible minor storm periods
03 Jan 15 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 13 was issued on 30 December and is
current for 2 January.
---
3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
31 Dec normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
01 Jan normal normal normal
02 Jan normal normal normal
03 Jan normal fair poor-fair

---
4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
31 Dec 30 near predicted monthly values, with possible degraded
conditions due to blanketing sporadic E at 03 & 06UT.

Predicted Monthly T-index for December: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
01 Jan 25 Near predicted monthly values
02 Jan 15 Near predicted monthly values
03 Jan -15 10 to 15% below predicted monthly values
COMMENT: IPS HF Communications Warning 16 was issued on 30 December
and is current for interval 3-4 January.
